## RELAX

**Svietidlá Relax predstavujú ucelený rad vstavaných žiarivkových svietidiel vhodných do stropov s viditeľnými T-profilmi (600x600mm a 620x620mm) a do sadrokartónových podhládov.**

### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela, lesklá). Spodný plech svietidla sa vyrába v plnom (L1) alebo perforovanom (L2) prevedení.

**Mriežky:** LA, LAM, LB, PAR, PAR MAT, PAR-V, PAR MAT-V

**Difúzory:** vyrobené v opálovom (PMMA) alebo v prizmatickom (PS) prevedení. Obidve varianty môžu byť na želanie z polykarbonátu.

**Reflektor:** pre verzie s parabolickou mriežkou na požiadanie možný prídavný vrchný reflektor (verzia REF), v ponuke aj asymetrický reflektor

Optický systém je uchytený pomocou štyroch pružín, ktoré umožňujú beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na stranách 76-79, v kapitole OPTICS.

**Relax LG:** dekoratívne vyhotovenie spodného plechu svietidla s mierne spusteným okrajom, cez ktorý uniká časť svetla smerom na strop. Pre lepší efekt je perforovaný okraj svietidla prekrytý prizmatickým difúzorom.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm), kompaktné žiarivky TC-L (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlo je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

### PRÍSLUŠENSTVO

- držiaky umožňujúce montáž do sadrokartónových podhládov (automaticky pre verziu PB)
- konektory umožňujúce rýchle elektrické pripojenie: 3-pólové konektory Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (na požiadanie konektory ISODOM, 5-pólové konektory Wieland gesis GST 18i5, Wago Winsta 770)
- poistné lanko zamedzujúce úplnému vypadnutiu svietidla z podhládu

## RELAX

**The Relax range of built-in lighting fixtures is suitable for mounting into T-bar ceiling grids (600 x 600 mm and 620 x 620 mm) and into plasterboard ceilings.**

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white, glossy). Bottom sheet can be delivered in two variants: solid (L1) and perforated (L2).

**Louvers:** LA, LAM, LB, PAR, PAR MAT, PAR-V, PAR MAT-V

**Diffuser:** made of PMMA in opal or prismatic (PS) finish. As an option, both types can be made of polycarbonate.

**Reflector:** additional top reflector (REF version) on request for parabolic louver versions, asymmetric reflector also available

Optical system is held by four clamping springs that allow easy lamp replacement.

Further description of individual optic types is listed on pages 76-79, in section OPTICS.

**Relax LG:** decorative modification of bottom sheet of the luminaire with softly damped edges, through them some fraction of light is going on the ceiling. For better effect is perforated edge of the luminaire covered with prismatic diffuser.

### WIRING

**Lighting fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signals)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm), compact fluorescent lamps TC-L (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows connecting conductors up to 2.5 mm<sup>2</sup> cross-section
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- accessories for easy mounting of lighting fixtures into plasterboard ceilings (automatically for PB version)
- connectors for fast electrical connection: 3-pole connectors Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (on request: connectors ISODOM, 5-pole connectors Wieland gesis GST 18i5, Wago Winsta 770)
- a safety wire to prevent the light fixture from falling out of the lower ceiling

## RELAX

**Die Relax-Leuchten stellen eine komplexe Reihe von eingebauten Leuchtstofflampen dar, die für die Decken mit sichtbaren T-Profilen (600x600mm und 620x620mm) und in die Gipskartonuntersichten geeignet sind.**

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (Signalweiß, glänzend). Das Unterblech der Leuchte wird in einer vollen (L1) oder perforierten Ausführung (L2) hergestellt.

**Raster:** LA, LAM, LB, PAR, PAR MAT, PAR-V, PAR MAT-V

**Diffusoren:** in einer Opalausführung (PMMA) oder einer prismatischen Ausführung (PS) hergestellt. Beide Varianten können wunschgemäß aus Polykarbonat sein.

**Reflektor:** für Ausführungen mit einem parabolischen Raster ist ein zusätzlicher Oberreflektor (REF-Variante) wunschgemäß möglich, im Angebot ist auch ein assymetrischer Reflektor

Das optische System ist mit vier Federn befestigt, die einen Lichtquellenaustausch ohne Werkzeug ermöglichen.

Nähere Beschreibung von einzelnen Optiktypen ist an Seiten 76-79 in OPTICS Anlage angeführt.

**Relax LG:** eine dekorative Ausführung des Unterblechs der Leuchte mit einem mäßig gesenkten Rand, durch den ein Teil des Lichtes deckenwärts strömt. Für einen besseren Effekt ist der Lochrand der Leuchte mit einem prismatischen Diffusor verdeckt.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, die Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponenten:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm), kompakte Leuchtstofflampen TC-L (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Leuchte können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

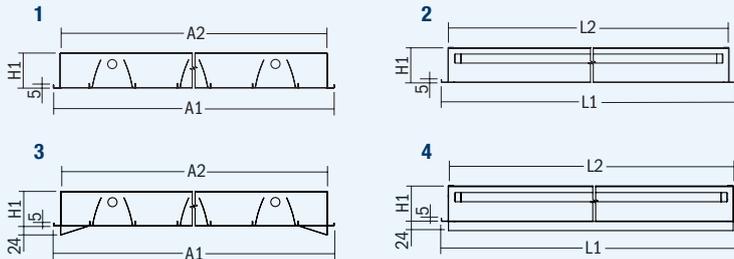

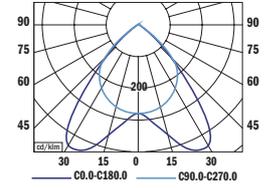

### ZUBEHÖR

- Halter, die den Einbau in die Gipskartonuntersichten ermöglichen (automatisch für die PB-Variante)
- Verbindungsstecker für schnellen elektrischen Anschluß: dreipolige Verbindungsstecker Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (Verbindungsstecker ISODOM, 5-polige Verbindungsstecker Wieland gesis GST 18i5, Wago Winsta 770 auf Wunsch)
- Sicherungslitze, die den völligen Ausfällen der Leuchte aus der Untersicht verhindert

# CLASSIC

# CLASSIC

## CLASSIC

**Svietidlá Classic sú určené pre inštaláciu na stropy ako prisadené svietidlá. Použitím vhodného príslušenstva je možné väčšinu svietidiel použiť aj ako závesné.**

### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela, lesklá), RAL 7001 (strieborná šedá) na požiadanie. Spodný plech svietidla sa vyrába v plnom (L1) alebo perforovanom (L2) prevedení.

**Mriežky:** LA, LAM, LB, PAR, PAR MAT, PAR-V, PAR MAT-V

**Difúzory:** vyrobené v opálovom (PMMA) alebo v prizmatickom (PS) prevedení. Obidve varianty môžu byť na želanie z polykarbonátu.

**Reflektor:** pre verzie T5 s parabolickou mriežkou na požiadanie možný prídavný vrchný reflektor (verzia REF), v ponuke aj asymetrický reflektor

Optický systém je uchytený pomocou štyroch pružín, ktoré umožňujú beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na strane 76/79, v kapitole OPTICS.

**Classic ASR:** trojžiarivková nárazu-odolná verzia, vyvinutá špeciálne pre osvetlenie športových hál a priestorov, v ktorých je vyžadovaná zvýšená ochrana svietidiel pred nárazmi z rôznych smerov. Optická časť (parabolická mriežka) je chránená plastovým krytom (čirý PC), ktorý je vsadený do plechového rámu a uchytený k telesu svietidla štyrmi pružinami. Možná závesná a prisadená montáž.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

### PRÍSLUŠENSTVO

- závesné príslušenstvo
- držiaky svietidiel do podhľadu umožňujúce polozapustenú montáž (verzia ASN T5)
- pri polozapustenej alebo závesnej montáži je možné svietidlá vybaviť konektormi umožňujúce rýchle elektrické pripojenie: 3-pólové konektory Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (na požiadanie konektory ISODOM, 5-pólové konektory Wieland gesis GST 18i5, Wago Winsta 770)

## CLASSIC

The Classic range of light fixtures are designed for ceiling installations as surface mounted. Using suitable accessories, most of the light fittings can also be used as pendant fittings.

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white, glossy), RAL 7001 (silver grey) on request. Bottom sheet can be delivered in two variants: solid (L1) and perforated (L2).

**Louvers:** LA, LAM, LB, PAR, PAR MAT, PAR-V, PAR MAT-V

**Diffuser:** made of PMMA in opal or prismatic (PS) finish. Optionally, both types can be made of polycarbonate.

**Reflector:** additional top reflector (REF version) on request for T5 parabolic louver versions, an asymmetric reflector is also available

The optical system is held by four clamping springs that allow easy lamp replacement.

Further description of individual optic types is listed on the page 76/79, in section OPTICS.

**Classic ASR:** three lamp, impact-resistant version, developed especially for lighting of sport halls and areas, where higher protection against impacts from different directions is needed for luminaires. Optical part (parabolic louvre) is protected with plastic cover (clear PC), which is built in sheet frame and secured to the luminaire's body with four clamping springs. Suspended and surface mounted versions available.

### WIRING

Light fixtures can be equipped with:

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signals)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> diameter
- a screwless three or five pole terminal allows connecting conductors up to 2.5 mm<sup>2</sup> cross-section
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- suspension accessories
- lamp holders allowing semi-recess mounting of light fixtures (ASN T5 version)
- in case of semi-recessed or pendant installation, the fixtures can be equipped with connectors allowing fast electrical connection: 3-pole connectors Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (on request: connectors ISODOM, 5-pole connectors Wieland gesis GST 18i5, Wago Winsta 770)

## CLASSIC

Die Leuchten Classic sind zum Einbau in die Decken als Anbauleuchten bestimmt. Mit einem geeigneten Zubehör ist es möglich die meisten Leuchten auch als Hängeleuchten zu verwenden.

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (Signalweiß, glänzend), RAL 7001 (Silbergrau) auf Wunsch. Das Unterblech der Leuchte wird in einer vollen (L1) oder perforierten Ausführung (L2) hergestellt.

**Raster:** LA, LAM, LB, PAR, PAR MAT, PAR-V, PAR MAT-V

**Diffusor:** in einer Opalausführung (PMMA) oder einer prismatischen Ausführung (PS hergestellt. Beide Varianten können auf Wunsch aus Polykarbonat sein.

**Reflektor:** für Ausführungen T5 mit einem parabolischen Raster ist ein Zusatzoberreflektor (REF-Variante) auf Wunsch möglich, im Angebot ist auch ein asymmetrischer Reflektor

Das optische System wird mit vier Federn befestigt, die Lichtquellenaustausch ohne Werkzeug ermöglichen.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 76/79 in OPTICS Anlage angeführt.

**Classic ASR:** eine stoßfeste Ausführung mit drei Leuchtstofflampen, die speziell für die Beleuchtung von Sporthallen und Räumen entwickelt wurde, in denen ein erhöhter Schutz von Leuchten gegen Stöße von verschiedenen Richtungen erfordert ist. Der optische Teil (ein parabolischer Raster) ist mit einem Kunststoffdeckel (klares PC) geschützt, der in einen Blechrahmen eingesetzt und zum Leuchtenkörper mit vier Federn befestigt ist. Die Hänge- und Anbaumontage sind möglich.

### ELEKTRISCHE AUSTRÜSTUNG

Die Leuchten können wie folgt ausgerüstet werden:

- mit konventionellen magnetischen Vorschaltgeräten, Standardklassen EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, Standardklassen EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit einem festem Kupferkern mit einem Durchschnitt von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchschnitt von max. 2,5 mm<sup>2</sup> anzuschließen
- Leuchte können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

### ZUBEHÖR

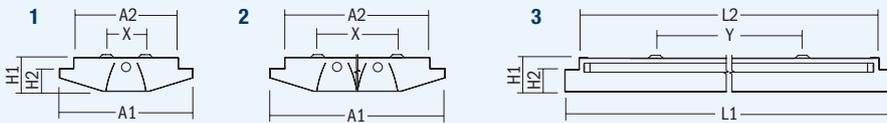

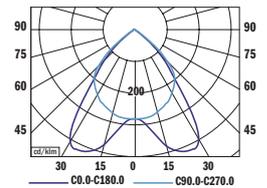

- Aufhängezubehör
- Leuchtenhalter für die Untersicht, die eine Imputzinstallation ermöglichen (ASN T5 Ausführung)
- bei einer Imputzinstallation oder Hängeinstallation ist es möglich, die Leuchten mit Verbindungssteckern für schnellen elektrischen Anschluss auszurüsten: dreipolige Verbindungsstecker Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (Verbindungsstecker ISODOM, 5-polige Verbindungsstecker Wieland gesis GST 18i5, Wago Winsta 770 auf Wunsch)

## RELAX/CLASSIC T5/T8

Rad svetidiel Relax/Classic je flexibilný a univerzálny. Široký výber mriežok a difúzorov spolu s možnosťou osadenia do väčšiny súčasných podhľadových stropov (Relax) robia z týchto typov svetidiel vhodnú voľbu pre takmer každú interiérovú aplikáciu. Vysokoleštené a matné mriežky sú navrhované tak, aby svetidlá spĺňali prísne požiadavky kladené na vysoký zrakový komfort, ktoré sú normou vyžadované v kancelárskych priestoroch. Rozptylné osvetlenie pre menej náročné využitie je dosahované pomocou kvalitných, účinných opálových alebo prizmatických v ráme vsadených difúzorov.

Mriežkové systémy zabezpečujú vynikajúce obmedzenie oslnenia a zrakový komfort v porovnaní s plastovými difúzormi. Ich hlavnou úlohou je zamedziť nežiadúcim odrazom vznikajúcich na obrazovkách počítačov.

### T5 optics

Menší priemer žiariviek T5 (o 40% menší priemer ako u žiariviek T8) umožňuje konštrukciu odpovedajúcu menším mriežkam. Úspory z ušetreného materiálu však nie sú všetky výhody, ktoré ponúkajú mriežky T5. Menší priemer žiariviek (16mm) spolu s použitím dômyselne vytvarovaných, vysoko účinných mriežok má za následok veľmi presné smerovanie svetelného toku žiariviek smerom von zo svetidla. Pre žiarivkové svetidlá osadené T5 zdrojmi je najvhodnejšou voľbou použitie parabolickej mriežky. V svetidlách Relax/Classic T5 sú skombinované vlastnosti ako vysoká účinnosť svetidla a špičkové rozloženie svetelného toku. Tienidlá medzi mriežkami môžu byť z plného alebo perforovaného plechu. Perforované poskytujú okrem estetického hľadiska aj mierne zvýšenie účinnosti svetidla.

Series of Relax (Classic) fittings is flexible and universal. The wide choice of louvers and diffusers, along with its compatibility with many different ceiling types, makes this luminaires suitable for almost any interior application. In office applications, the mirror and satin louver attachments are designed to meet the most demanding of visual tasks. For more general applications, diffuse efficient lighting is achieved via high quality, frame mounted opal or prismatic covers.

Louvers provide superior glare control and high visual comfort compared with lens-diffuser systems. The most common application of louvers is to eliminate the fixture glare reflected on computer screens.

### T5 optics

The smaller diameter of T5 lamps (40% smaller in diameter than T8 Lamps) enables the design of correspondingly smaller louvers. Economy of scale, however, is not the complete story. The small diameter of the lamps (16mm) together with the use of high performance reflectors, results in more precise control of the direction and the output of the light source.

For fluorescent luminaires with T5 lamps, the most effective means of optical control is parabolic reflection. Efficiency, excellent light distribution and a wide choice of standard options have been combined to produce Relax/Classic T5 range. Solid or back-lit perforated feature panels can be selected. Besides the aesthetic aspect, perforated panels provides also little increase of luminaire efficiency.

Aufgrund der großen Auswahl an Rastern und Abdeckelementen sowie der Einbaumöglichkeiten bei unterschiedlichen Deckenkonstruktionen eignen sich die Relax/Classic-Leuchten für nahezu alle Anwendungen im Innenbereich. In Büroräumen erfüllen die Spiegel- und Matrasterblenden die anspruchsvollsten Sehaufgaben. In Anwendungen mit Allgemeinbeleuchtung ergeben unsere hochwertigen opalen und prismatischen Abdeckelemente, die am Leuchtenrahmen montiert werden, eine wirkungsvolle diffuse Beleuchtung. Raster bieten im Vergleich zu Linsenstreukörper-Systemen eine effizientere Blendungskontrolle und höheren Sehkomfort. Raster werden insbesondere verwendet, um Leuchtenblendung an Computerbildschirmen zu verhindern.

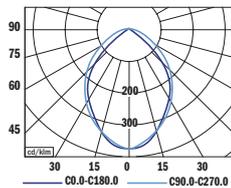

### T5 optics

Der kleinere Durchmesser der T5-Lampen (40% kleiner als bei T8) ermöglicht dementsprechend kleinere Raster. Der Unterschied in der Größe ist aber nicht alles. Aufgrund des kleinen Lampendurchmessers (16mm) und der Verwendung von hochwirksamen Reflektoren ist die Lichtquelle hinsichtlich Ausbreitungsrichtung und Ausbeute präziser.

Bei Leuchtstoffleuchten mit T5-Lampen ist die wirkungsvollste Optiklösung parabolische Reflexion. Relax/Classic T5 bietet einen hohen Wirkungsgrad und eine exzellente Lichtverteilung. Bei der optischen Abdeckung kann zwischen Vollelementen und gelochten Elementen gewählt werden, wodurch die Leuchte den spezifischen Anforderungen genau angepasst werden kann.

Corrected Glare Indices referring to 5124lm Total Luminous Lux

Vysokoleštená, anodizovaná zrkadlová mriežka s matnými, vrúbkovanými priečnymi lamelami. Zabezpečuje veľmi dobré smerovanie svetelného toku pri vysokej účinnosti svetidla. Táto hliníková mriežka ponúka veľmi dobrý pomer medzi jej vlastnosťami, kvalitou a cenou. Priečne lamely z matného hliníkového plechu majú stromčekový profil. Mriežka je vybavená 4 upínacími pružinami. Hliník: Alanod 350G (316G2 - na želanie)

Rovnaká mriežka ako typ LA zabezpečuje vďaka matnej úprave ešte väčšie smerovanie svetla ako mriežky z lešteného hliníka. Matná anodizovaná hliníková mriežka, priečne lamely z matného hliníkového plechu so stromčekovým profilom. Mriežka je vybavená 4 upínacími pružinami. Hliník: Alanod mill finish 1300

Na bielo nastriekaná mriežka s difúznym odrazom svetla, vybavená 4 upínacími pružinami. Je vhodná pre montáž do miestností, kde nie je kladený veľký dôraz na precízne smerovanie svetelného toku zo svetidiel.

These white coloured, sheet fixture optics, which utilise diffusion reflection, are also equipped with 4 clamping springs. Suitable for room installations where specific control of light flux is not requested.

A specular polished aluminium optic, with matte etched aluminium cross blades, provides very good control of the light beam through high fixture efficiency. This aluminium louver offers a very good properties/quality/price ratio. The dull finish, aluminium cross blades have a tree profile. The louver is equipped with 4 clamping springs. Aluminium: Alanod 350G (316G2 – on request)

The same louver as LA but provides even softer light distribution than a louver with polished aluminium. The matte finish, anodised aluminium louver and dull finish, aluminium cross blades have a tree profile. The louver is equipped with 4 clamping springs. Aluminium: Alanod mill finish 1300

Ein weiß gespritzter Raster mit einer diffusen Lichtreflexion, ausgestattet mit 4 Spannfedern. Er ist zum Einbau in einen Raum geeignet, wo keine große Betonung auf präzise Richtung des Lichtstromes aus den Leuchten gelegt wird.

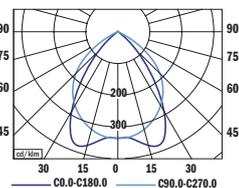

Ein hochpolierter, anodisierter Spiegelraster mit matten Kerbquerlamellen. Er gewährleistet eine sehr gute Richtung des Lichtstromes bei einer hohen Leuchtwirkung. Dieser Aluminiumraster bietet ein sehr gutes Verhältnis zwischen seinen Eigenschaften, Qualität und Preis an. Die Querlamellen aus mattem Aluminiumblech haben einen Baumprofil. Der Raster ist mit vier Spannfedern ausgerüstet. Aluminium: Alanod 350G (316G2 – auf Wunsch)

Der gleiche Raster wie der LA-Typ gewährleistet dank der matten Gestaltung eine noch weichere Lichtrichtung als die Raster aus poliertem Aluminium. Mattered anodisierter Aluminiumraster, Querlamellen aus mattem Aluminiumblech mit Baumprofil. Der Raster ist mit vier Spannfedern ausgestattet. Aluminium: Alanod mill finish 1300

Parabolická mriežka s priechytnými lamelami taktiež parabolického tvaru, vyrobená z lešteného anodizovaného hliníka s obľadom na vysokú účinnosť a presné smerovanie svetelného toku. Vďaka dvojitomu zakriveneému parabolickému tvaru je ideálna pre využitie v miestnostiach s počítačmi, kde je kladený dôraz na vysoký zrakový výkon. Svetelný tok napomáha smerovať vysoká kvalita použitého hliníka s viac ako 95% odrazivosťou (MIRO). Tento typ mriežok zabezpečuje najvyššiu zrakovú pohodu za obrazovkami počítačov vďaka presnému obmedzeniu rušivejšieho oslnenia od monitorov a samotných svetelných zdrojov.

Nízky jas mriežky spĺňa hranice európskej normy EN 12464-1 pre osvetlenie pracovísk obsahujúcich zobrazovacie jednotky - DSE (limity 200 resp. 1000 cd/m² v 65 stupňových uhloch).

Hliník (PAR): Alanod 350G (316G2, MIRO4 - na požiadanie)  
Hliník (PAR-V): Alanod 316G2 (MIRO4 - na požiadanie)

Double parabolic louvre with parabolic crossblades made of specular anodised aluminium is mechanically designed to give maximum efficiency and controlled light distribution. Thanks to the double-curved parabola is ideal to be used in rooms featuring computers, where good visual comfort is required. The light output is optimised by perfect quality aluminium that can have over 95% reflectance (MIRO). This types of louvers provides highest visual comfort at the screen due to exact glare evaluation.

Low glare of the louvre is in accordance with european standard EN 12464-1 for lighting of workplaces equipped with display screens - DSE (limits 200 resp. 1000 /m² at 65° elevation).

Aluminium (PAR): Alanod: 350G (316G2, MIRO4 on request)  
Aluminium (PAR-V): Alanod: 316G2 (MIRO4 on request)

Der Doppelparabolspiegelraster mit seitlichen Reflektoren und Querlamellen ist konzipiert, um eine maximale Wirkung und kontrollierte Lichtverteilung zu erzeugen. Aufgrund der parabolischen Eigenschaften eignet sich dieser Raster ideal für Räume mit Computern, wo ein hoher Sehkomfort erforderlich ist. Durch die Verwendung von hochwertigstem Aluminium mit über 95% Reflexion (MIRO) wird eine optimale Lichtausbeute erzielt. Dieser Raster-Typ bietet aufgrund exakter Blendungsbewertung höchsten Sehkomfort am Bildschirmarbeitsplatz.

Die geringe Blendung entspricht der Europäischen Norm EN 12464-1 für die Beleuchtung von Arbeitsstätten in Innenräumen (max. 200 bzw. 1000 cd/m² bei Ausstrahlungswinkel 65°).  
Aluminium (PAR): Alanod: 350G (auf Wunsch 316G2, MIRO4)  
Aluminium (PAR-V): Alanod: 316G2 (auf Wunsch MIRO4)

Parabolická mriežka s priechytnými lamelami taktiež parabolického tvaru, vyrobená z matného anodizovaného hliníka poskytuje všetky výhody ako typ PAR. Vďaka matnej úprave zabezpečuje ešte väčšie smerovanie svetla ako mriežky z lešteného hliníka. Tento typ mriežok zabezpečuje najvyššiu zrakovú pohodu za obrazovkami počítačov vďaka presnému obmedzeniu rušivejšieho oslnenia od monitorov a samotných svetelných zdrojov. Matné prevedenie mriežok občasne ešte zvýši estetický efekt celej osvetľovanej miestnosti a sú občasne používané pre reprezentatívne osvetlenie.

Nízky jas mriežky spĺňa hranice európskej normy EN 12464-1 pre osvetlenie pracovísk obsahujúcich zobrazovacie jednotky (limity 200 resp. 1000 cd/m² v 65 stupňových uhloch).

Hliník: matný anodizovaný hliník Alanod - 1100G (MIRO5, MIRO7 - na požiadanie)

Double parabolic louvre with parabolic crossblades made of matt anodised aluminium provides all functions as PAR type. Thanks to the matt surface, it provides even softer luminous flux distribution as type PAR. This types of louvers provides highest visual comfort at the screen due to exact glare limitation. Matt louvers usually enhance the esthetic effect of rooms and are used for representative illumination.

Low glare of the louvre is in accordance with european standard EN 12464-1 for lighting of workplaces equipped with display screens - DSE (limits 200 resp. 1000 /m² at 65° elevation).

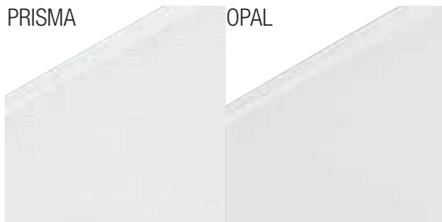

Aluminium: matt finish anodised aluminium Alanod - 1100G (MIRO5, MIRO7 - on request)

Der Doppelparabolspiegelraster mit Parabolquerlamellen aus matt eloxiertem Aluminium bietet die gleichen Vorteile wie der Typ PAR. Auch bei diesem Raster gewährleistet die perfekte Blendungsbegrenzung höchsten Sehkomfort am Bildschirmarbeitsplatz. Matt ausgeführte Raster verstärken gewöhnlich die ästhetische Wirkung von Räumen und werden häufig zur repräsentativen Beleuchtung verwendet. Die geringe Blendung des Rasters entspricht der Europäischen Norm EN 12464-1 für die Beleuchtung von Arbeitsstätten in Innenräumen (max. 200 bzw. 1000 cd/m² bei Ausstrahlungswinkel 65°).  
Aluminium: Matt anodisieren Alanod 1100G (auf Wunsch MIRO5, MIRO7)

Účinnosť svetiel rady Relax/Classic môže byť významným spôsobom zvýšená pridaním vrchnej odrazovej plochy nad žiarivku. Fotometrické merania potvrdili nárast účinnosti svietidla o 8% oproti bežnému vyhotoveniu svietidla bez vrchného reflektora. Spolu s použitím kvalitnejšieho hliníka MIRO sa účinnosť svietidla môže zvýšiť až o 15%. Celá osvetľovacia sústava sa tak stáva omnoho efektívnejšia, zároveň umožňuje šetriť vstupné a prevádzkové náklady redukciami počtu svietidiel pri zachovaní rovnakej intenzity osvetlenia. Vrchná odrazová plocha je v ponuke aj pre matné mriežky.

Luminaire efficiency by Relax/Classic luminaires can be markedly increased by adding of aluminium top reflecting surface above fluorescent lamps. Photometric measurements confirm increase of luminaire efficiency about 8% against standard version without top reflector. Together with MIRO aluminium, luminaire output ratio can increase about 15%. Whole lighting system becomes even more effective, together it helps to save operating costs by reducing of luminaire amount but to achieve equivalent illumination level. Top reflector available also for matt louvers.

Der Wirkungsgrad der Relax-Leuchten kann durch eine reflektierende Oberfläche oberhalb der Leuchtstofflampen deutlich erhöht werden. Photometrische Messungen ergaben eine Verbesserung des Wirkungsgrades um 8% gegenüber der Standardausführung ohne Reflektor. In Kombination mit MIRO-Aluminium wird der Wirkungsgrad um 15% erhöht. Das Beleuchtungssystem wird insgesamt effizienter und ermöglicht eine Senkung der Betriebskosten, da mit einer geringeren Anzahl von Leuchten das gleiche Beleuchtungsniveau erreicht wird. Der Reflektor ist auch für matt ausgeführte Raster erhältlich.

Asymetrické smerovanie svetelného toku len do jednej strany umožňuje návrhom osvetlenia vyzdvihnúť steny alebo tovar vystavený na policiach pri zachovaní rovnakého typu svetidla, ktorý je použitý pre celú osvetľovaciu sústavu. Taktiež veľmi vhodné pre osvetlenie tabule v učebniach.

Asymmetrical light distribution that enables designers to accentuate walls and displays while still applying the same type of luminaire appearance as used for general lighting. Suitable for the brightening up of shelves in sales rooms or boards in class rooms.

Asymmetrische Lichtstärkeverteilung, die eine Hervorhebung von bestimmten Bereichen im Raum ermöglicht, wobei die gleichen Leuchtentypen wie für die Allgemeinbeleuchtung verwendet werden. Geeignet für das Aufhellen von Regalen in Verkaufsräumen oder Schultafeln in Klassenzimmern.

Dekoratívna difúzna optika z PMMA pre rovnomerný široký rozptyl svetelného toku. Vhodná pre miestnosti s nižšími stropmi alebo tam, kde je vyžadované zvýšené krytie svetelných zdrojov. Optika pozostáva z povrchovo upraveného rámu vo farbe svetidla, ktorý drží samotný difúzor – ten je vyrobený z priesvitného plastu v opálovom alebo prizmatickom prevedení.

A decorative, closed PMMA prismatic optic for a wider un-i-form beam spread, this optic is suitable for low installation rooms and where mechanical lamp protection is required. This prismatic optic is composed of a diffuser-holding frame in a painted sheet on which the metacrylate plate is fixed. The cover can be made of opal or a transparent prismatic metacrylate.

Dekorative prismatische Abdeckung aus PMMA-Metacrylat für eine größere Ausstrahlungsbreite. Geeignet für niedrigere Räume und wo ein Schutz der Lampe erwünscht ist. Lackierter Metallrahmen, an dem das Abdeckelement angebracht ist. Plastik-Abdeckung in opaler oder prismatischer Ausführung.

**MIRO aluminium – viac možností pre štandardné mriežky**

Firma Alanod ponúka pre výrobcov svetidiel vysokokvalitný hliníkový materiál s vysokou odrazivosťou. Normálny anodizovaný hliníkový materiál má celkovú odrazivosť do 87%. Pre posunutie tejto odrazivosti na vyššiu úroveň, musí byť na hliníkový povrch vo vákuu nanosená niekoľko nanometrov hrubá optická vrstva. Naparená vrstva je z čistého hliníka (Al 99.99%).

MIRO je názov pre špeciálny typ materiálov s vysokou odrazivosťou. Rad produktov MIRO ponúka ucelený výber z leštených alebo matných povrchov z 95% celkovou odrazivosťou. Povrch s vysokou odrazivosťou dovoľuje zvýšiť účinnosť svetidla o 10-20%. Zvýšená svetelná účinnosť prináša mnohé úspory. Počas samotnej inštalácie je potrebný menší počet svetidiel, počas každodenného svietenia sa teda ďalej šetria náklady za elektrickú energiu a klimatizáciu.

Na všetkých plochách z MIRO materiálu úplne absentuje dúhové zafarbenie hliníka. Majú výbornú UV stabilitu. Všetky MIRO produkty umožňujú tvarovanie bez viditeľného popraskania. Aj po vytvarovaní si hliník stále uchováva svoju vysokú odolnosť voči korózii. Pokiaľ je MIRO používané vo vysokokvalitných mriežkach svetidiel, je vždy zaručené presné smerovanie svetla a uhly clonenia pre svetelné zdroje môžu byť podstatne zmenšené. Pre tieto vlastnosti je hliník MIRO ideálny materiál pre osvetlenie kancelárií a pracovísk so zobrazovacími jednotkami (DSE). Hodnoty jasov svetidiel v elevačných uhloch 65° a väčších bez výnimky nepresahujú maximálnu dovolenú hodnotu 200 cd/m². Hliník MIRO sa veľmi ľahko čistí a v normálnej prevádzke nepríťahuje žiadny prach.

**MIRO aluminium – new possibilities for standard louvers**

Alanod is a producer of high quality and highly reflective surfaces for the lighting industry. Normal anodised aluminium lighting grades have a total reflectivity of up to 87%. To increase this total reflectivity to another level, several nanometre-thin optical coatings must be applied to the aluminium surface in a vacuum. The vapour deposited layer is pure aluminium (Al 99.99%).

MIRO is the name for a unique brand of highly reflective products. The MIRO range has a complete range of specular and diffuse surfaces with 95% total reflectivity. This highly reflective surface enables achieving a 10 - 20 % increase in fixture efficiency. The increased light output brings many cost savings. During installation, fewer fittings are required, and, during normal usage, lighting energy costs and air-conditioning costs are considerably reduced. MIRO® surfaces are absolutely free of iridescent colours. They have outstanding UV stability. All MIRO products allow forming without any visible defects (scratches). After forming, the material shows no reduction in corrosion resistance. When MIRO is used in quality lighting louvers, exact light reflection is enhanced, and cut-off angles are considerably reduced. Therefore MIRO is the ideal material to use for office and DSE (display screen equipment) areas. The values achievable with all standard angles are, without exception, well below 200 cd/m². MIRO aluminium can be easily cleaned. It is antistatic and will attract no dust under normal operating conditions.

**MIRO aluminium – mehr Möglichkeiten für Standardraster**

Die Gesellschaft Alanod erzeugt für die Leuchtenindustrie ein hochwertiges Aluminiummaterial mit hoher Reflexionsfähigkeit. Das übliche anodisierte Aluminiummaterial hat eine gesamte Reflexionsfähigkeit bis zu 87 %. Um diese Reflexionsfähigkeit auf ein höheres Niveau zu bringen, muß auf die Aluminiumfläche im Vakuum eine optische Schicht mit der Dicke von einigen Nanometern aufgetragen werden. Die bedampfte Schicht ist aus einem Reinaluminium (Al 99,99 %).

MIRO ist der Name für einen einzigartigen Typ der Materialien mit einer hohen Reflexionsfähigkeit. Die Produktreihe MIRO bietet eine komplexe Auswahl an polierten oder matten Oberflächen mit gesamter Reflexionsfähigkeit von 95 %. Die Oberfläche mit hoher Reflexionsfähigkeit erlaubt die Wirksamkeit der Leuchte um 10 – 20 % zu erhöhen. Die erhöhte Lichtwirksamkeit bringt viele Einsparnisse. Während der Installation ist eine kleinere Anzahl an Leuchten notwendig, beim tagtäglichen Leuchten werden die Kosten für elektrische Energie und Klimatisierung gespart.

Auf allen Flächen aus dem MIRO-Material fehlt die Regenbogenfärbung des Aluminiums. Sie haben eine ausgezeichnete UV-Stabilität. Alle MIRO-Produkte ermöglichen Formen ohne sichtbare Rißbildung. Auch nach der Formgebung erhält sich das Aluminium ständig seine hohe Widerstandsfähigkeit gegen Korrosion. Wenn MIRO in hochwertigen Leuchterastern verwendet wird, ist immer eine genaue Lichtrichtung gewährleistet und die Schirmwinkel können wesentlich reduziert werden. Aufgrund dieser Eigenschaften ist das MIRO-Aluminium ein ideales Material für Beleuchtung der Büroräumlichkeiten und Arbeitsplätze mit Bildschirmanzeigergeräten (DSE). Die Werte der Leuchtdichten in Elevationswinkeln von 65° und größer übersteigen ohne Ausnahme den maximalen zulässigen Wert von 200 cd/m² nicht. Das MIRO-Aluminium wird sehr einfach gereinigt, es ist nicht statisch und zieht während eines üblichen Betriebs kein Staub an.

## QUADRO

Svietidlá Quadro sú určené pre inštaláciu do stropov s viditeľnými T-profilmi (600x600mm a 620x620mm) a do sadrokartónových podhládov.

### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela, lesklá), RAL 7001 (strieborná šedá) na požiadanie.

**Mriežky:** PAR, PAR MAT

**Difúzor:** kalené pieskované sklo

Optický systém je uchytený pomocou štyroch pružín, ktoré umožňujú beznástrojovú výmenu svetelných zdrojov. Sklo (Quadro Decor) je uchytené pomocou štyroch dekoratívnych skrutiek.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2

**Ostatné komponenty:**

- svetelné zdroje: kompaktné žiarivky TC-L (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková trojpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- variantu svietidiel ASN je na požiadanie možné vybaviť núdzovou jednotkou s 1h autonómnou prevádzkou

### PRÍSLUŠENSTVO

- plechová inštaláčna doska umožňujúca montáž do stropov s T profilmi
- konektory umožňujúce rýchle elektrické pripojenie: 3-pólové konektory Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A
- poistné lanko zamedzujúce úplnému vypadnutiu svietidla z podhladu

## QUADRO

Quadro light fixtures are designed for mounting into T-bar ceiling grids (600 x 600 mm and 620 x 620 mm) and into plasterboard ceilings.

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white, glossy), RAL 7001 (silver grey) on request

**Louvers:** PAR, PAR MAT

**Diffuser:** hardened, sandblasted glass

The optical system is held by four clamping springs that allow easy lamp replacement. The glass (Quadro Decor) is attached using four decorative screws.

### WIRING

Light fixtures can be equipped with:

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are standardly compensated
- electronic control gears, standard class EEI=A2

**Other components:**

- lamps: compact fluorescent lamps TC-L (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three-pole terminal allows connecting conductors up to 2.5 mm<sup>2</sup> cross-section
- on request, the ASN variant can be equipped with an emergency unit providing 1 hour of autonomous operation

### ACCESSORIES

- metal installation plate for mounting into T-bar ceiling grids
- connectors for fast electrical connection: 3-pole connectors Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A
- a safety wire to prevent the light fixture from falling out of the lower ceiling

## QUADRO

Die Quadro-Leuchten sind zur Installation in die Decken mit sichtbaren T-Profilen (600x600mm und 620x620mm) und in die Gipskartonuntersichten bestimmt.

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (Signalweiß, glänzend), RAL 7001 (Silbergrau) auf Wunsch.

**Raster:** PAR, PAR MAT

**Diffusor:** sanglestrahltes Hartglas

Das optische System wird mit vier Federn befestigt, die Lichtquellenaustausch ohne Werkzeug ermöglichen. Das Glas (Quadro Decor) wird durch vier Dekorationsschrauben befestigt.

### ELEKTRISCHE AUSTRÜSTUNG

Die Leuchten können wie folgt ausgerüstet werden:

- mit konventionellen magnetischen Vorschaltgeräten, Standardklassen EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, Standardklassen EEI=A2

**Andere Komponente:**

- Lichtquellen: kompakte Leuchtstofflampen TC-L (es ist notwendig die Lichtquellen extra zu bestellen)
- Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- es ist möglich die Leuchtenvariante ASN auf Wunsch mit einer Noteinheit mit Autonombetrieb von 1 Stunde auszustatten

### ZUBEHÖR

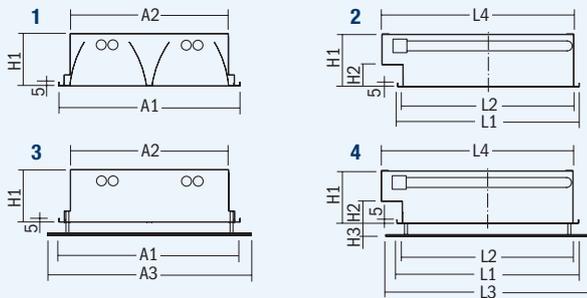

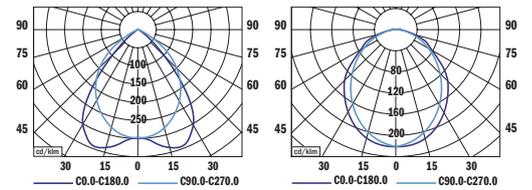

- Installationsblechplatte, die den Einbau in die Decken mit T-Profilen ermöglicht
- Verbindungsstecker für schnellen elektrischen Anschluß: dreipolige Verbindungsstecker Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/
- ein Sicherheitsseil, das völligen Ausfall der Leuchte aus der Untersicht verhindert

## INDIRECT

**Svietidlá Indirect sú určené pre inštaláciu do stropov s viditeľnými T-profilmi (600x600mm a 620x620mm), do sadrokartónových podhládov a na stropy ako prisadené svietidlá (verzia AS).**

### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela, polomatná), RAL 7001 (strieborná šedá) na požiadanie

**Koncovky (Indirect LG):** biely ABS

**Mriežky:** PAR, PAR MAT, PAR-V, PAR MAT-V

**Tienidlá:** vyrobené z plného (L1) alebo perforovaného (L2) plechu, povrchovo upravené rovnako ako teleso svietidla. Pre rovnomerný rozptyl svetla je pod perforovanými tienidlami vsunutá tenká polykarbonátová fólia.

**Difúzor:** kalené pieskované sklo

Optický systém je uchytený pomocou jednoduchého upínacieho zariadenia umožňujúceho beznástrojovú výmenu svetelných zdrojov. Sklo (Indirect C-G) je uchytené pomocou štyroch dekoračných skrutiek.

Blížší popis jednotlivých typov optiky je uvedený na strane 122/123, v kapitole OPTICS.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm), kompaktné žiarivky TC-L (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>, svorkovnica je z telesa ľahko vyklopiteľná, čo uľahčuje elektrické zapojenie svietidla
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

### PRÍSLUŠENSTVO

- držiaky umožňujúce montáž do sadrokartónových podhládov (automaticky pre verziu PB)
- konektory umožňujúce rýchle elektrické pripojenie: 3-pólové konektory Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (na požiadanie konektory ISODOM, 5-pólové konektory Wieland gesis GST 18i5, Wago Winsta 770)
- poisťné lanko zamedzujúce úplnému vypadnutiu svietidla z podhládu

## INDIRECT

**Indirect class light fixtures are designed for mounting into T-bar ceiling grids (600 x 600 mm and 620 x 620 mm), into plasterboard ceilings, and on ceilings as surface mounted light fittings (AS version).**

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white, semi matte), RAL 7001 (silver grey) on request

**Sockets (Indirect LG):** white ABS

**Louvers:** PAR, PAR MAT, PAR-V, PAR MAT-V

**Shades:** made of solid (L1) or perforated (L2) sheet metal with the same surface finish as the body. For regular light diffusion, a thin polycarbonate foil is used under the perforated shades.

**Diffuser:** hardened, sandblasted glass

The optical system is held by simple clamping equipment that allows easy lamp replacement. Glass (Indirect C-G) is attached using four decorative screws.

Further description of individual optic types is listed on the page 122/123, in section OPTICS.

### WIRING

**Light fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic ballasts can be controlled with analogue, digital or DALI signals)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm), compact fluorescent lamps TC-L (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows connecting conductors up to 2,5 mm<sup>2</sup> cross-section, the connection box is easily retractable, which makes electrical connection easier
- an emergency version of these light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- accessories for easy mounting of light fixtures into plasterboard ceilings (automatic for PB version)
- connectors for fast electrical connection: 3-pole connectors Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (on request: connectors ISODOM, 5-pole connectors Wieland gesis GST 18i5, Wago Winsta 770)
- a safety wire to prevent the light fixture from falling out of the lower ceiling

## INDIRECT

**Die Indirect-Leuchten sind für den Einbau in die Decken mit sichtbaren T-Profilen (600x600mm und 620x620mm), in die Gipskartonuntersichten und in die Decken als Anbauleuchten (AS Ausführung), bestimmt.**

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (Signalweiß, halbmatt), RAL 7001 (Silbergrau) auf Wunsch.

**Endstücke (Indirect LG):** weiß ABS

**Raster:** PAR, PAR MAT, PAR-V, PAR MAT-V

**Schirme:** aus einem Voll- (L1) oder Lochblech (L2) hergestellt, mit Oberflächenbehandlung wie der Leuchtenkörper. Für eine gleichmäßige Lichtstreuung ist unter den Lochschirmen eine dünne Polykarbonatfolie eingelegt.

**Diffusor:** sandgestrahltes Hartglas

Das optische System ist durch eine einfache Einspanneinrichtung befestigt, die Lichtquellenaustausch ohne Werkzeug ermöglicht. Das Glas (Indirect C-G) wird mit vier Dekorationsschrauben befestigt.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 122/123 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm), kompakte Leuchtstofflampen TC-L (Lichtquellen sind extra zu bestellen)
- Innenleiter mit einem festen Kupferkern mit Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen, die Klemmleiste ist leicht kippbar, was elektrischen Anschluß der Leuchte erleichtert
- es ist möglich, die Leuchte auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden auszustatten

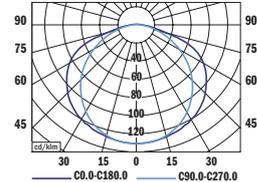

### ZUBEHÖR

- Halter, die den Einbau in die Gipskartonuntersichten ermöglichen (automatisch für die Variante PB)
- Verbindungsstecker für schnellen elektrischen Anschluss: dreipolige Verbindungsstecker Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A (Verbindungsstecker ISODOM, 5-polige Verbindungsstecker Wieland gesis GST 18i5, Wago Winsta 770 auf Wunsch)
- ein Sicherheitsseil, das völligen Ausfall der Leuchte aus der Untersicht verhindert

## OPTICS T5/T8/TC-L

Rad Indirect tvorí skupinu štýlových, moderných žiarivkových svetidiel, ktoré sú vhodné pre celkové osvetlenie mnohých typov interiérov. Tieto svetidlá vytvárajú pre oči veľmi príjemné, mäkké osvetlenie kombináciou priamej a odrazenej zložky svetelného toku. Svetidlá sú vyrábané s plnými alebo perforovanými tienidlami svetelných zdrojov, alebo v kombinácii s parabolickou mriežkou. Rôznymi konštrukčnými variantami svetidiel môže byť ovplyvňovaný pomer medzi priamou a nepriamou zložkou svetla. Systémy s nepriamym smerovaním svetelného toku sú vhodné všade tam, kde sa uplatní príjemné rozptýlené osvetlenie. Vďaka ich atraktívnemu vzhľadu je to tiež praktická voľba pre prestížne typy priestorov.

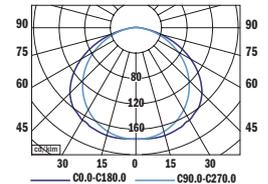

Indirect is a range of stylish, modular fluorescent fittings that are ideal for general lighting in a variety of applications. These light fixtures create a soft style of light from a combination of direct and indirect lighting. Indirect optic light fixtures are available with plain or perforated lampshades, together with parabolic louver combinations. Different amounts of direct and indirect light are provided by different fixture variants. An Indirect lighting system represents the ideal solution for all areas where diffused, comfortable lighting is necessary. It is also a practical choice for prestigious applications, thanks to its attractive, architectural appearance.

Die Indirect-Reihe bildet eine Gruppe der stilvollen, modernen Leuchtstofflampen, die für gesamten Beleuchtung von vielen Innenraumtypen geeignet sind. Diese Leuchten bilden für die Augen eine sehr angenehme weiche Beleuchtung durch die Kombination der direkten und reflektierten Komponente. Die Leuchten sind mit Voll- oder Lochschirmen der Lichtquellen, oder in der Kombination mit einem parabolischen Raster hergestellt. Durch verschiedene Konstruktionsvarianten der Leuchte kann das Verhältnis zwischen der direkten und indirekten Komponente des Lichtes beeinflusst werden. Systeme mit indirekter Richtung des Lichtstromes sind dort geeignet, wo eine angenehme zerstreute Beleuchtung zur Geltung kommt. Dank ihrem attraktiven Aussehen sind sie auch eine praktische Wahl für exklusive Arten der Räumlichkeiten.

Žiarivky v týchto typoch svetidiel sú kompletne prekryté tienidlami, vyrobenými z plného alebo perforovaného plechu. Táto verzia svetidiel Indirect zabezpečuje dostatočné množstvo vhodne odrazeneho nepriameho svetla pre mäkké osvetlenie smerom nadol, zatiaľ čo svetlo nie je príliš silné na to aby osľovalo. Druh a usporiadanie tienidiel závisí hlavne na danom prostredí a vyžadovanej intenzite osvetlenia, ale všeobecne sa dá povedať že používaním perforovaných tienidiel sa významne zvýši účinnosť svetidiel.

Fluorescent lamps in these types of light fixtures are completely covered by lampshades, made of a plain or perforated sheet. This Indirect range provides a generous amount of properly reflected indirect light for soft, downward lighting, while the light is not intense enough to create a glare. Lampshade types mostly depend on the desired lighting level and ambience, but fixture efficiency can be markedly increased by using of perforated lampshades.

Die Leuchtstofflampen in diesen Leuchtentypen sind vollständig mit den Schirmen verdeckt, die aus dem Voll- oder Lochblech hergestellt sind. Diese Indirect-Reihe gewährleistet eine ausreichende Menge des passend reflektierten indirekten Lichtes für sanfte Beleuchtung nach unten, weil das Licht nicht zu stark ist, um zu blenden. Die Art und die Anordnung der Schirme hängen hauptsächlich von gegebener Umgebung und geforderter Intensität der Beleuchtung ab, aber man kann allgemein sagen, daß durch Verwendung der Lochschirme die Wirksamkeit der Leuchten beträchtlich erhöht werden kann.

## PRO

### DOWNLIGHT PRO

**Rad svetidiel Downlight PRO je určený pre vstavenie do rôznych typov podhládov. Jeho hlavné znaky sú jednoduchá montáž a nízky profil svetidla, ktorý umožňuje montáž do podhládov s výškou len 100 mm. Svetidlá Downlight PRO ponúkajú bohaté príslušenstvo, rôzne typy optických systémov, ako aj verziu s vyšším krytím.**

#### KONŠTRUKCIA

**Teleso svetidla:** šedý polykarbonát

**Reflektory:** hliníkové s rôznou povrchovou úpravou - lesklý (polished), matný (mat), fazetový (facet)

**Kryt reflektora (rad 212):** kalené sklo (pieskované alebo číre), polykarbonát (opálový, číry alebo prizmatický)

**Obruč:** hliníkový odliatok, povrchovo upravený elektrostaticky nanášanou práškovou farbou RAL 9010 (čistá biela)

**Inštalčná doska:** pozinkovaný plech, držiaky proti vytrhnutiu vodičov zo svorkovnice, dve gumené prechodky pre vodiče (možná priebežná montáž)

Uchytenie svetidla v podhlade je vyriešené prostredníctvom troch otočných polykarbonátových úchyto, nastaviteľných pre rôzne hrúbky stropu. Obruč sa ku polykarbonátovému telu uchyťava malým pootočením v troch fixačných bodoch, čo aj v prípade sklenených krytov alebo dekoratívneho príslušenstva umožňuje rýchlu beznástrojovú výmenu svetelných zdrojov. Krycie sklá sú uchytené zvnútra na obruči a utesnené silikónovým tesnením.

Bližší popis jednotlivých typov optiky je uvedený na stranách 180-183, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

**Svetidlá môžu byť vybavené:**

- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: kompaktné žiarivky TC-DEL a TC-TEL (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrútková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>, svorkovnica je z telesa ľahko vyklopiteľná, čo uľahčuje elektrické zapojenie svetidla
- svetidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny, núdzová jednotka je umiestnená na špeciálnej montážnej doske mimo svetidla

#### PRÍSLUŠENSTVO

- parabolická mriežka obmedzujúca nežiadúce oslnenie
- široká ponuka dekoračných prvkov a skiel
- štandardne sú svetidlá dodávané s bezskrútkovou napichovacou svorkovnicou, na požiadanie je možné vyhotovenie s jedným alebo dvomi konektormi umožňujúcimi rýchle elektrické pripojenie: 3-pólové konektory Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A alebo jedným 5-pólovým konektorom Wieland gesis GST 18i5, Wago Winsta 770)

## DOWNLIGHT PRO

The Downlight PRO range of light fixtures is intended for installation into various ceiling types. Its main characteristics are simple installation and low fixture profile that allows installation into ceilings only 100 mm thick. Downlight PRO fixtures offer rich accessories, numerous types of optical systems, as well as version with higher ingress protection.

### CONSTRUCTION

**Housing:** grey polycarbonate

**Reflectors:** aluminium with various surface finishes – polished, matt, facet

**Reflector cover (212 range):** hardened glass (sandblasted or pure), polycarbonate (opal, pure or prismatic)

**Ring:** aluminium casting, finished with electrostatic powder coating RAL 9010 (pure white)

**Installation plate:** galvanised sheet steel, holders to prevent the conductors from loosening off the connecting box, two rubber reducing adapters for the conductors (through wiring possible)

Ceiling attachment of the light fixture is done using three revolving polycarbonate fixtures, adjustable for various ceiling widths. The ring is attached to the polycarbonate body using a small twist at the three points of fixation, which allows fast, tool-free lamp replacement even if glass covers or decorative accessories are used. The cover glass is attached to the inside of the ring and silicon-sealed.

Further description of individual optic types is listed on pages 180-183, in section OPTICS.

### WIRING

Light fixtures can be equipped with:

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic ballasts can be controlled with analogue, digital or DALI signals)

**Other components:**

- lamps: TC-DEL and TC-TEL compact fluorescent lamps (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2,5 mm<sup>2</sup> cross-section; the connection box is easily retractable making electrical connection easier
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request; the emergency version is placed on a special installation plate apart from the light fixture

### ACCESSORIES

- parabolic grid reducing unwanted glare
- wide range of decorative glass and accessories
- standard equipment: the light fixtures are delivered with screw-free connection boxes; on request, it can be delivered with one or two connectors allowing fast electrical connection: 3-pole connectors Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A or one 5-pole connector (Wieland gesis GST 18i5, Wago Winsta 770)

## DOWNLIGHT PRO

Die Downlight PRO-Leuchtenreihe ist zum Einbau in verschiedene Untersichtstypen bestimmt. Ihre Hauptmerkmale sind einfacher Einbau und niedriges Profil der Leuchte, das den Einbau in die Untersichte mit einer Höhe von 100 mm ermöglicht. Die Downlight PRO-Leuchten bieten ein breites Zubehör, verschiedene Typen von optischen Systemen und auch Ausführungen mit höher Deckung an.

### KONSTRUKTION

**Leuchtenkörper:** graues Polykarbonat

**Reflektoren:** aus Aluminium mit verschiedener Oberflächenbehandlung – glänzend (polished), matt (mat), facettiert (facet)

**Reflektordeckel (Reihe 212):** Hartglas (sandgestrahlt oder klar), Polykarbonat (mit Opal, klar oder prismatisch)

**Einfassung:** Aluminiumguß, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe RAL 9010 (reinweiß)

**Installationsplatte:** verzinktes Blech, Halter gegen Ausreißen der Leiter aus der Klemmleiste, zwei Gummidurchführungen für Leiter (möglicher durchgehender Einbau)

Leuchte werden in der Untersicht mit drei drehbaren Polykarbonatschellen befestigt, die für verschiedene Deckendicken einstellbar sind. Die Einfassung wird an Polykarbonatkörper mit kleiner Drehung in drei Fixierungspunkten befestigt, was auch im Falle der Glasdeckel oder des Dekorationszubehörs schnellen Austausch der Lichtquellen ohne Werkzeug ermöglicht. Die Deckgläser sind von innen an der Einfassung befestigt und mit Silikondichtung gedichtet.

Nähere Beschreibung von einzelnen Optiktypen ist an Seiten 180-183 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dusternden elektronischen Vorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: kompakte Leuchtstofflampen TC-DEL und TC-TEL (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht, Leiter an einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen, die Klemmleiste läßt sich leicht aus der Leuchte kippen, was elektrischen Anschluß erleichtert
- Leuchte können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgestattet werden, die Noteinheit wird an einer speziellen Einbauplatte außer der Leuchte angebracht

### ZUBEHÖR

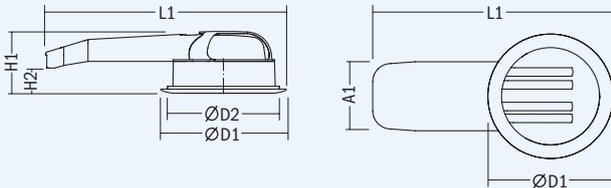

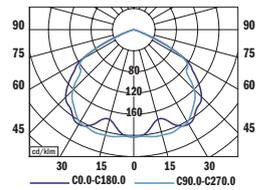

- parabolischer Raster, der unerwünschte Blendung verhindert
- breites Angebot von Dekorationseinheiten und Gläsern
- standardmäßig sind die Leuchten mit einer schraubenlosen Aufstechklemmleiste geliefert, Ausführung mit einem oder zwei Verbindungssteckern, die einen schnellen elektrischen Anschluß ermöglichen, ist auf Wunsch möglich: dreipolige Verbindungsstecker Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A oder rein fünfpoliger Verbindungsstecker Wieland gesis GST 18i5, Wago Winsta 770)

## DOWNLIGHT

**Rad svietidiel Downlight 2xx je určený pre vstavanie do rôznych typov podhládov. Jeho hlavné znaky sú jednoduchá montáž a nízky profil svietidla. Svietidlá Downlight 2xx ponúkajú bohaté príslušenstvo, rôzne typy optických systémov, ako aj verziu s vyšším krytím.**

### KONŠTRUKCIA

**Teleso svietidla:** pozinkovaný plech

**Reflektory:** hliníkové s rôznou povrchovou úpravou - lesklý (polished), matný (mat), fazetový (facet), asymetrický

**Kryt reflektora:** kalené sklo - pieskované (rad 2x2, rad 2x5), číre (rad 2x5) alebo číre so vzorom (rad 242)

**Obruč:** plechový výlisok, povrchovo upravený elektrostaticky nanášanou práškovou farbou RAL 9003 (signálna biela), iná povrchová úprava – RAL 9006 (hliník biely), chrómová alebo zlatá je možná na požiadanie

**Inštaláčna doska:** pozinkovaný plech, držiaky proti vytrhnutiu vodičov zo svorkovnice, dve gumené prechodky pre vodiče (možná priebežná montáž)

Uchytenie svietidla v podhlade je vyriešené prostredníctvom dvoch plechových pružín, nastaviteľných pre rôzne hrúbky stropu. Krycie sklo (rad 2x2) a mriežka (rad 2x4) sú v svietidlách uchytené pomocou troch pružín, dekoratívne sklo (rad 2x3) a krycie sklo (rad 2x5) sú prichytené k obruči prostredníctvom troch dekoračných skrutiek, krycie sklo (rad 242) je uchytené v troch fixačných bodoch. Všetky tieto spôsoby uchytenia umožňujú rýchlu beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na stranách 180-183, v kapitole OPTICS.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: kompaktné žiarivky TC-D/TC-DEL a TC-T/TC-TEL (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplôtনা odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny, núdzová jednotka je umiestnená na špeciálnej montážnej doske mimo svietidla

### PRÍSLUŠENSTVO

- široká ponuka dekoračných prvkov a skiel (bližší popis v časti Downlight and Tubus accessories)
- samostatný plechový box pre oddelené umiestnenie predradníka od svietidla (verzia separate gear box)
- štandardne sú svietidlá dodávané s bezskrutkovou napichovacou svorkovnicou, na požiadanie je možné vyhotovenie s jedným alebo dvomi konektormi umožňujúcimi rýchle elektrické pripojenie: 3-pólové konektory Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A

## DOWNLIGHT

The Downlight 2xx range of light fixtures is intended for installation into various types of ceilings. Its main characteristics are simple installation and low fixture profile. Downlight 2xx light fixtures offer rich accessories, numerous types of optical systems, as well as version with higher ingress protection.

### CONSTRUCTION

**Housing:** galvanised sheet steel

**Reflectors:** aluminium with various types of surface finishes – polished, matt, facet, asymmetrical

**Reflector cover:** hardened glass – sandblasted (2x2 range, 2x5 range), pure (2x5 range) or patterned (242 range)

**Ring:** sheet steel, electrostatic powder coat finish RAL 9003 (signal white), other finish types RAL 9006 (white aluminium), chrome or gold available on request

**Installation plate:** galvanised sheet steel, holders to prevent conductors from loosening off the connecting box, two rubber reducing adapters for the conductors (through wiring possible)

Ceiling attachment of the fixture is done using two metal springs, adjustable for various ceiling widths. The cover glass (2x2 range) and grid (2x4 range) are attached to the light fixture using three springs; the decorative glass (2x3 range) and cover glass (2x5 range) are attached to the ring using three decorative springs; the cover glass (242 range) is attached at three points of fixation. All these attachment methods allow fast and tool-free lamp replacement.

Further description of individual optic types is listed on pages 180-183, in section OPTICS.

### WIRING

Light fixtures can be equipped with:

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

#### Other components:

- lamps: TC-D/TC-DEL and TC-T/TC-TEL compact fluorescent lamps (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> in cross-section
- an emergency version of the light fixture with autonomous operation of 1 or 3 hours is available on request, the emergency unit is placed on a special installation plate apart from the light fixture

### ACCESSORIES

- a wide range of decorative elements and types of glass (detailed description in Downlight and Tubus Accessories chapters)
- an independent metal box for separate placement of control gear apart from the light fixture (separate gear box version)
- standard equipment: light fixtures are delivered with screwless connection boxes; on request, they can be delivered with one or two connectors allowing fast electrical connection: 3-pole connectors Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A

## DOWNLIGHT

Die Downlight 2xx-Leuchtenreihe ist zum Einbau in verschiedene Typen der Untersichte bestimmt. Ihre Hauptmerkmale sind einfacher Einbau und niedriges Leuchteprofil. Die Leuchten Downlight 2xx bieten breites Zubehör, verschiedene Typen der optischen Systeme und auch Ausführungen mit höher Deckung an.

### KONSTRUKTION

**Leuchtenkörper:** verzinktes Blech

**Reflektoren:** aus Aluminium mit verschiedener Oberflächenbehandlung – glänzende (polished), matte (mat), facettierte (facet), asymmetrische

**Reflektordeckel:** Hartglas - sandgestrahlt (Reihe 2x2, Reihe 2x5), klar (Reihe 2x5) oder klar mit Muster (Reihe 242)

**Einfassung:** Blechpressteil, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe RAL 9003 (Signalweiß, glänzend), andere Oberflächenbehandlung – RAL 9006 (weißes Aluminium), aus Chrom oder Gold auf Wunsch

**Installationsplatte:** verzinktes Blech, Halter gegen Ausreißen der Leiter aus der Klemmleiste, zwei Gummidurchführungen für Leiter (möglicher durchgehender Einbau)

Leuchte werden mit zwei Blechfedern befestigt, die für verschiedene Deckendicken einstellbar sind. Das Deckglas (Reihe 2x2) und der Raster (Reihe 2x4) sind in den Leuchten mit drei Federn befestigt, das Dekorglas (Reihe 2x3) und das Deckglas (Reihe 2x5) werden an die Einfassung mit drei Dekorationsschrauben befestigt, das Deckglas (Reihe 242) ist in drei Fixierungspunkten befestigt. Alle diesen Arten der Befestigung ermöglichen schnellen Lichtquellen austausch ohne Werkzeug.

Nähere Beschreibung von einzelnen Optiktypen ist an Seiten 180-183 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind nicht standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

#### Andere Komponente:

- Lichtquellen: kompakte Leuchtstofflampen TC-D/TC-DEL und TC-T/TC-TEL (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit einem festen Kupferkern mit Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- die, Leuchte können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgestattet werden, die Noteinheit ist auf einer speziellen Einbauplatte außerhalb der Leuchte angebracht

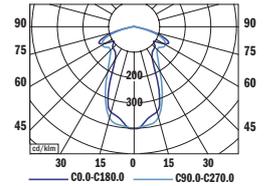

### ZUBEHÖR

- breites Angebot an Dekorationseinheiten und Gläsern (nähere Beschreibung im Teil Downlight and Tubus accessories)
- selbständige Blechbox für abgesonderte Anbringung des Vorschaltgeräten von der Leuchte (Ausführung separate gear box)
- standardmäßig werden die Leuchten mit einer schraubenlosen Aufstechklemmleiste geliefert, die Ausführung mit einem oder zwei Verbindungssteckern für schnellen elektrischen Anschluss ist auf Wunsch möglich: dreipolige Verbindungsstecker Wieland gesis GST 18i3, Wago Winsta 770, AAG Stucchi 1601A/1602A

GL 20

# DOWNLIGHT

## HID

### DOWNLIGHT HID

Rad svetidiel Downlight HID je určený pre vstavenie do rôznych typov podhládov. Jeho hlavné znaky sú vysoký svetelný výkon, kompaktné rozmery, jednoduchá montáž a natáčateľný reflektor u vybraných typov. Svetidlá Downlight PRO HID sú vyrábané len vo verzii s vyšším krytím.

#### KONŠTRUKCIA

##### Teleso svetidla:

- na šedo nastriekaný (RAL 7024) hliníkový odliatok s polykarbonátovou spodnou časťou (PRO HID)
- pozinkovaný plech (rad 251)
- hliníkový odliatok (rad 252, 253, 254)

**Reflektor:** hliníkový s rôznou povrchovou úpravou - lesklý (rad PRO, 251), matný (rad 251, 252, 253, 254)

**Kryt reflektora:** kalené sklo - pieskované (rad PRO, 251, 253, 254) alebo číre (rad 252)

**Obruč:** na bielo nastriekaný hliníkový odliatok - RAL 9010 čistá biela (rad PRO, 252, 253, 254); na bielo nastriekaný plechový výlisok (rad 251)

#### PRO

Uchytenie svetidla v podhlade je vyriešené prostredníctvom troch otočných polykarbonátových úchyto, nastaviteľných pre rôzne hrúbky stropu. Obruč sa ku polykarbonátovému telu uchytaťva malým pootočením v troch fixačných bodoch, čo umožňuje rýchlu beznástrojovú výmenu svetelného zdroja. Krycie sklo je uchytené zvnútra na obruči a utesnené silikónovým tesnením.

#### 251, 252, 253, 254:

Uchytenie svetidiel v podhlade je vyriešené prostredníctvom dvoch plechových pružín, nastaviteľných pre rôzne hrúbky stropu.

Krycie sklo (251) je uchytené zvnútra na obruči a utesnené silikónovým tesnením. Rámik (251) je k telesu svetidla prichytený dvomi pružinami, obruč (253, 254) sa k hliníkovému telesu uchytaťva malým pootočením vo fixačných bodoch. Všetky tieto spôsoby uchytenia umožňujú rýchlu beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na stranách 180-183, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

Svetidlá sú napájané zo samostatného boxu s predradným príslušenstvom. Predradný box je nutné objednať zvlášť. Box môže byť vybavený:

- konvenčným magnetickým predradníkom so zapaľovačom, štandardne kompenzovaným
- elektronickým predradníkom

##### Ostatné komponenty:

- svetelné zdroje: metal-halogenidové výbojky HIT/HIT-DE (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče so spletaným medeným jadrom prierezu 0,75 mm<sup>2</sup> v silikónovej izolácii (teplotná odolnosť do 130°C)
- trojpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>

#### PRÍSLUŠENSTVO

- vodiče s konektormi (Wieland) umožňujúcimi rýchle elektrické prepojenie predradný box - svetidlo
- vodič s konektorom (Wieland, Wago) umožňujúci rýchle elektrické pripojenie predradného boxu k sieti

## DOWNLIGHT HID

The Downlight HID range of light fixtures is intended for installation into various ceiling types. Its main features include high lumen output, compact dimensions, simple installation, and a deflectable reflector in selected types. Downlight PRO HID light fittings are only manufactured in the version with higher ingress protection.

### CONSTRUCTION

#### Housing:

- grey painted (RAL 7024) aluminium casting with polycarbonate bottom section (PRO HID)
- galvanised sheet metal (251 range)
- aluminium casting (252, 253, 254 range)

**Reflector:** aluminium with various surface finishes – polished (range PRO, 251), matt (range 251, 252, 253, 254)

**Reflector cover:** hardened glass - sandblasted (PRO, 251, 253, 254 range), pure (252 range)

**Ring:** aluminium casting, electrostatic powder coat finish RAL 9010 pure white (range PRO, 252, 253, 254), white coloured sheet steel (251 range)

#### PRO:

Ceiling attachment of the light fitting is done using three revolving polycarbonate fixtures, adjustable for various ceiling widths. The ring is attached to the polycarbonate body using a small twist at the three points of fixation, which allows fast, tool-free lamp replacement. The cover glass is attached to the inside of the ring and silicon-sealed.

#### 251, 252, 253, 254:

Ceiling attachment of the light fixture is done using two metal springs, adjustable for various ceiling widths.

The cover glass (251) is attached to the inside of the ring and silicon-sealed. The ring (251) is attached to the body by two springs; the ring (253, 254) is attached to the aluminium body by a short twist at the points of fixation. All these attachment methods allow fast, tool-free lamp replacement.

Further description of individual optic types is listed on pages 180-183, in section OPTICS.

### WIRING

Light fittings are powered from an independent box with control gear accessories. The control gear box must be ordered separately. The box can be equipped with:

- conventional magnetic control gear with an ignitor, light fixtures are standardly compensated
- electronic control gear

#### Other components:

- lamps: metal-halide discharge lamps HIT/HIT-DE (lamps must be ordered separately)
- flexible copper internal conductors, silicon insulated (heat resistant up to 130°C) with 0.75 mm<sup>2</sup> cross-section
- a three-pole connector allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section

### ACCESSORIES

- conductors with connectors (Wieland) allowing fast electrical connection between the separate gear box and lighting fixture
- conductor with connectors (Wieland, Wago) allowing fast electrical connection of the separate gear to the mains

## DOWNLIGHT HID

Die Downlight HID-Leuchtenreihe ist zum Einbau in verschiedene Typen der Untersichte bestimmt. Ihre Hauptmerkmale sind hohe Lichtleistung, kompakte Abmessungen, einfacher Einbau und drehbarer Reflektor bei ausgewählten Typen. Die Downlight PRO HID-Leuchten werden nur in der Ausführung mit höher Deckung hergestellt.

### KONSTRUKTION

#### Leuchtenkörper:

- grau angespritztes (RAL 7024) Aluminiumguß mit Polykarbonat-Unterteil (PRO HID)
- verzinktes Blech (Reihe 251)
- Aluminiumguß (Reihe 252, 253, 254)

**Reflektor:** aus Aluminium mit verschiedener Oberflächenbehandlung – glänzende (Reihe PRO, 251), matte (Reihe 251, 252, 253, 254)

**Reflektordeckel:** Hartglas - sandgestrahlt (Reihe PRO, 251, 253, 254), klar (Reihe 252)

**Einfassung:** Aluminiumguß, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - RAL 9010 Reinweiß (Reihe PRO, 252, 253, 254), ein weiß aufgespritzter Blechpressteil (Reihe 251)

#### PRO:

Leuchte werden in der Untersicht mit drei drehbaren Polykarbonatschellen befestigt, die für verschiedene Deckendicken einstellbar sind. Die Einfassung wird an Polykarbonatkörper mit kleiner Drehung in drei Fixierungspunkten befestigt, was schnellen Austausch der Lichtquelle ohne Werkzeug ermöglicht. Das Deckglas wird von innen an der Einfassung befestigt und mit Silikondichtung gedichtet.

#### 251, 252, 253, 254:

Leuchten werden in der Untersicht mit zwei Blechfedern befestigt, die für verschiedene Deckendicken einstellbar sind.

Das Deckglas (251) wird von innen an der Einfassung befestigt und mit Silikondichtung gedichtet. Der Raster (251) wird zum Leuchtenkörper mit zwei Federn befestigt, die Einfassung (253, 254) wird zum Aluminiumkörper mit kleiner Drehung in Fixierungspunkten befestigt. Alle diesen Befestigungsarten ermöglichen einen schnellen Lichtquellenaustausch ohne Werkzeug.

Nähere Beschreibung von einzelnen Optiktypen ist an Seiten 180-183 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

Leuchten werden aus einer selbständigen Box mit einem Vorschaltzubehör gespeist. Die Vorschaltbox ist extra zu bestellen. Die Box kann wie folgt ausgerüstet werden:

- mit einem konventionellen magnetischen Vorschaltgeräte mit Zündgeräte, standardmäßig kompensiert
- mit einem elektronischen Vorschaltgeräte

#### Andere Komponente:

- Lichtquellen: Metall-Halogenid-Entladungslampen HIT/HIT-DE (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit einem gespleissten Kupferkern mit Durchschnitt von 0,75 mm<sup>2</sup> in einer Silikonisierung (Wärmewiderstand bis zu 130°C)
- dreipolige Klemmleiste ermöglicht die Leiter in einen Durchschnitt von max. 2,5 mm<sup>2</sup> anzuschließen

### ZUBEHÖR

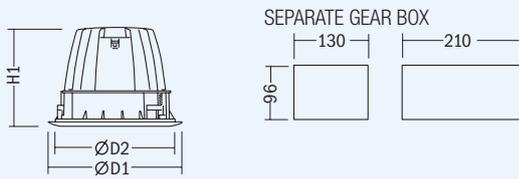

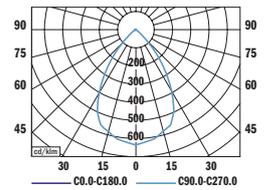

- Leiter mit Verbindungssteckern (Wieland), die schnelle elektrische Durchschaltung Vorschaltbox-Leuchte ermöglichen
- Leiter mit einem Verbindungsstecker (Wieland, Wago), der schnellen elektrischen Anschluß der Vorschaltbox zum Netz ermöglicht

## DOWNLIGHT S

**Rad svetidiel Downlight S dopĺňa zaužívaný rad kruhových svetidiel pre kompaktné žiarivky a je určený pre vstavenie do rôznych typov podhládov. Svetidlá Downlight S ponúkajú dve rozmerové varianty, verziu s vyšším krytím ako aj mriežku pre obmedzenie oslnenia od svetelných zdrojov.**

### KONŠTRUKCIA

**Teleso svetidla:** pozinkovaný plech

**Reflektory:** hliníkové s rôznou povrchovou úpravou - lesklý (polished), matný (mat)

**Kryt reflektora:** pieskované kalené sklo

**Rám:** plechový výlisok, povrchovo upravený elektrostaticky nanášanou práškovou farbou RAL 9003 (signálna biela), iná povrchová úprava - RAL 9006 (hliník biely), chrómová alebo zlatá je možná na požiadanie

Uchytenie svetidla v podhlade je vyriešené prostredníctvom dvoch plechových pružín, nastaviteľných pre rôzne hrúbky stropu. Štvorcový rám je k telesu svetidla prichytený dvomi drôtenými pružinami, ktoré v závislosti od verzie fixujú k svetidlu krycie sklo (rad 2x2) alebo mriežku (rad 2x4). Všetky tieto spôsoby uchytenia umožňujú rýchlu beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na stranách 180-183, v kapitole OPTICS.

### ELEKTRICKÁ VÝBAVA

Svetidlá sú napájané zo samostatného boxu s predradným príslušenstvom. Predradný box je nutné objednať zvlášť. Box môže byť vybavený:

- konvenčným magnetickým predradníkom, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svetidlá nie sú štandardne kompenzované
- elektronickým predradníkom, štandardne triedy EEI=A2
- stmievateľným elektronickým predradníkom, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

#### Ostatné komponenty:

- svetelné zdroje: kompaktné žiarivky TC-D/TC-DEL a TC-T/TC-TEL (svetelné zdroje je nutné objednať zvlášť)
- box pre predradník: pozinkovaný plech, držiaky proti vytrhnutiu vodičov zo svorkovnice, bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- svetidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny, núdzová jednotka je umiestnená na špeciálnej montážnej doske mimo svetidla

### PRÍSLUŠENSTVO

- samostatný plechový box pre oddelené umiestnenie predradníka od svetidla (separate gear box)
- vodič s konektorom (Wieland, Wago) umožňujúci rýchle elektrické pripojenie predradného boxu k sieti

## DOWNLIGHT S

The range of lighting fixtures Downlight S supplements the range of circular luminaires for compact fluorescent lamps and is intended for installation into various types of ceiling. Downlight S luminaires exist in two size variants, a version with a higher degree of protection, as well as a louver for reduction of lamp glare.

### CONSTRUCTION

**Housing:** galvanised sheet steel

**Reflectors:** aluminium with various types of surface finish – polished, matt

**Reflector cover:** hardened sandblasted glass

**Ring:** sheet steel, finished with electrostatic powder coating RAL 9003 (signal white), other type of finish - RAL 9006 (white aluminium), chrome or gold on request.

Attachment of the luminaire in the ceiling is done using two metal springs, adjustable for various ceiling widths. The square ring is attached to the luminaire using two wire springs which, based on version, fix cover glass (2x2 range) or grid (2x4 range) to the luminaire. All these attachment methods allow fast toolless luminaire replacement.

Further description of individual optic types is listed on pages 180-183, in section OPTICS.

### WIRING

The lighting fittings are powered from an independent box with control gear accessories. The control gear box must be ordered separately. The box can be equipped with:

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, lighting fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

#### Other components:

- lamps: compact fluorescent lamps TC-D/TC-DEL and TC-T/TC-TEL (light sources must be ordered separately)
- control gear box: galvanised sheet steel, conductor holders, screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- emergency version of lighting fixtures with autonomous operation 1 or 3 hours is available on request, the emergency version is placed on a special installation plate apart from the luminaire

### ACCESSORIES

- independent sheet steel box for separate placement of control gear apart from the luminaire (separate gear box)
- conductor with connector (Wieland, Wago) allowing fast electrical connection of the box to the mains

## DOWNLIGHT S

Die Downlight S-Leuchtenreihe ergänzt die gebräuchliche Reihe der Rundleuchten für kompakte Leuchtstofflampen und ist zum Einbau in verschiedene Typen der Untersichten bestimmt. Die Downlight S-Leuchten bieten zwei Maßvarianten an, eine Ausführung mit höher Deckung und auch einen Raster für Beschränkung der Blendung von den Lichtquellen.

### KONSTRUKTION

**Leuchtenkörper:** verzinktes Blech

**Reflektoren:** aus Aluminium mit verschiedener Oberflächenbehandlung – glänzende (polished), matte (mat)

**Reflektordeckel:** sandgestrahltes Hartglas

**Rahmen:** Blechpressteil, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe RAL 9003 (Signalweiß), andere Oberflächenbehandlung – RAL 9006 (weißes Aluminium), aus Chrom oder Gold

Die Befestigung der Leuchte ist in der Untersicht mittels zwei Blechfedern gelöst, die für verschiedene Dicken der Decke einstellbar sind. Der Quadratrahmen ist zum Leuchtenkörper mit zwei Drahtfedern befestigt, die in Abhängigkeit von der Ausführung ein Deckglas (Reihe 2x2) oder einen Raster (Reihe 2x4) zu der Leuchte fixieren. Alle diese Arten der Befestigung ermöglichen einen schnellen Austausch der Lichtquellen ohne Werkzeug.

Nähere Beschreibung von einzelnen Optiktypen ist an Seiten 180-183 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSTRÜSTUNG

Die Leuchten sind aus einer Einzelbox mit Vorschaltzubehör gespeist. Es ist notwendig die Vorschaltbox extra zu bestellen. Die Box kann ausgerüstet sein:

- mit einem konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch, die Leuchten sind nicht standardmäßig kompensiert
- mit einem elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit einem dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

#### Andere Komponenten:

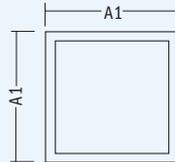

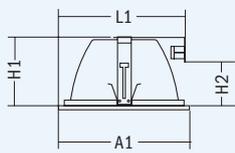

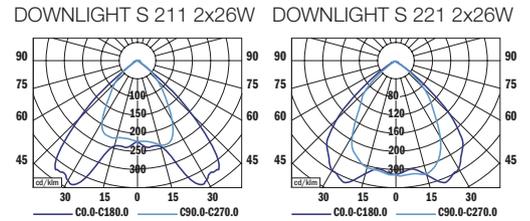

- Lichtquellen: kompakte Leuchtstofflampen TC-D/TC-DEL a TC-T/TC-TEL (es ist notwendig die Lichtquellen extra zu bestellen)
- die Box für den Vorschalt: verzinktes Blech, die Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- es ist möglich die Leuchten auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden auszurüsten, die Noteinheit ist auf einer speziellen Einbauplatte außer der Leuchte angebracht

### ZUBEHÖR

- eine Einzelblechbox für separate Anbringung des Vorschaltgeräten von der Leuchte (separate gear box)
- ein Leiter mit einem Verbindungsstecker (Wieland, Wago), der einen schnellen elektrischen Anschluß der Vorschaltbox zum Netz ermöglicht

## **DOWNLIGHT/TUBUS TC-D/TC-DEL/TC-T/TC-TEL/HIT/HIT-DE**

Downlighty smerujú svetelný tok smerom von z reflektorov veľmi kompaktných tvarov, ktoré sú ľahko architektonicky začleneniteľné do ľubovoľného priestoru. V ich základnej podobe distribuujú svetlo smerom nadol v úzkych či širokých zväzkoch a sú často používané pre obstarávanie celkového osvetlenia interiérov. OMS disponuje pomerne širokým radom týchto svietidiel, vyvinutých splňať požiadavky pre štýl a dizajn v dnešných obchodných či komerčných priestoroch so širokým rozsahom použitia – banky, hotely, galérie, úradné priestory, kancelárie; pre rôzne účely zvýraznenia vystavovaného tovaru či pre aplikácie vyžadujúce neoslňujúce osvetlenie. Tieto svietidlá s pomerne vysokou účinnosťou sú osadené kompaktnými žiarivkami uchytenými v horizontálnej polohe v kombinácii s lesklým, matným alebo fazeťovým reflektorom. Táto kombinácia zaručuje optimálne vlastnosti svietidla spojené s nízkou energetickou náročnosťou, atraktívnym dizajnom a výborným rozložením svetelného toku.

Rad downlightov ponúka širokú flexibilitu aj vďaka veľkému množstvu doplnkov – ako príslušenstvo sú ponúkané dekoratívne obruče, opálové sklá pre zvýšenie krytia svietidla, dekoratívne ozdobné sklá alebo mriežky zabráňujúce oslneniu.

Downlights deliver a controlled beam of light from a compact, architecturally integrated apertures. In their basic form, downlights direct light downwards in narrow or wide beams and can especially be used to produce general lighting. OMS dispose of exceptional range of downlighters developed to meet the demand for style and design in today's retail and commercial sector with a broad field of usage – banks, hotels, galleries, department stores, offices, for any display purposes and also for low glare application requirements. These efficient luminaires offer horizontal compact fluorescent lamp positioning combined with polished, matt or facet aluminium finish, ensuring optimal performance together with low energy consumption, attractive design and giving excellent light distribution.

Downlight range offers optimum flexibility from a wide range of attachment options – as accessories are available decorative rings, opal cover glass, decorative glass rings or turboraster louvres.

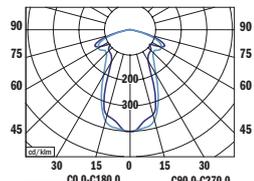

Die Downlight-Leuchten richten den Lichtstrom aus den Reflektoren der sehr kompakten Formen nach außen, die sich architektonisch in einen beliebigen Raum leicht eingliedern können. In ihrer Grundform verteilen sie das Licht in engen oder breiten Bündeln nach unten und werden oft für gesamte Beleuchtung der Innenräumen verwendet. OMS verfügt über ziemlich breite Reihe dieser Leuchten, die entwickelt wurden, um Ansprüche auf Stil und Design in heutigen Geschäfts- oder Wirtschaftsräumen mit einem breiten Anwendungsbereich zu erfüllen – Banken, Hotels, Galerien, Amtsräume, Büros; für verschiedene Zwecke der Betonung der ausgestellten Ware oder für Applikationen, die eine blendfreie Beleuchtung fordern. Diese Leuchten mit ziemlich hoher Wirksamkeit sind mit kompakten Leuchtstoffröhren bestückt, die in der horizontalen Lage in der Kombination mit einem glänzenden, matten oder facettierten Reflektor befestigt werden. Diese Kombination gewährleistet optimale Leuchteigenschaften, die mit kleinem Energieaufwand, attraktiven Design und ausgezeichneten Verteilung des Lichtstromes verbunden sind.

Die Downlight-Reihe bietet eine breite Flexibilität auch dank großem Zubehör an – als Zubehör sind Dekorationseinfassungen, Opalgläser zur Erhöhung der Leuchtendeckung, dekorative Gläser oder die, die Blendung verhindernden Raster anbieten.

BASIC OPTIC

DOWNLIGHT 201 1x13W

efficiency 73%

Glare Evaluation According to UGR

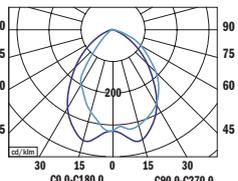

Table with 12 rows and 5 columns for glare evaluation of Downlight 201. Rows include ceiling, walls, and floor mounting at various heights (2H to 12H) and distances (1.0H to 2.0H).

corrected glare indices for 5852lm total flux

ASYMMETRIC

DOWNLIGHT 211 ASSYMMETRIC 1x13W

efficiency 72%

Vyhotovene svetidla s asymetrickym reflektorom, navrhovanim pre osvetlenie stien, alebo zvyraznenie tovaru vystaveného na policiach v obchodných či iných priestoroch.

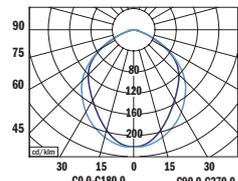

Circular recessed compact fluorescent downlight luminaires with asymmetric reflector, designed for wall washing or highlighting in retail, display and general commercial applications.

Die Ausführung der Leuchte mit einem asymmetrischen Reflektor, entworfen für die Beleuchtung der Wände oder Betonung der auf den Regalen in Geschäftsräumen oder anderen Räumen ausgestellten Ware.

PROTECTIVE GLASS

DOWNLIGHT 202 1x13W

efficiency 49%

Glare Evaluation According to UGR

Table with 12 rows and 5 columns for glare evaluation of Downlight 202. Rows include ceiling, walls, and floor mounting at various heights (2H to 12H) and distances (1.0H to 2.0H).

corrected glare indices for 5852lm total flux

Vstavané kruhové svetidlá pre kompaktné žiarivky s minimalistickým dizajnom, vybavené lesklým, matným alebo fazetovým reflektorom sú ideálne pre zabezpečenie celkového osvetlenia v hoteloch, recepciách, chodbách, toaletách a mnohých ďalších verejných, predajných či iných interiéroch.

Circular recessed compact fluorescent downlight luminaire with simple design, equipped with polish, matt or faceted reflector, ideal for providing necessary and ambient lighting in hotels, reception areas, corridors, toilets and many other commercial, retail and leisure applications.

Die eingebauten Rundleuchten für kompakte Leuchtstofflampen mit einem minimalistischen Design und mit einem glänzenden, matten oder facetierten Reflektor sind ideal für Gewährleistung der gesamten Beleuchtung in Hotels, Rezeptionen, Gängen, Toiletten und in vielen anderen öffentlichen Innenräumen, Verkaufsräumen und anderen Innenräumen.

Vstavané kruhové svetidlá pre kompaktné žiarivky sú uzatvorené krycím sklom, ktoré im dáva ochranu proti vniknutiu pevných predmetov a vody IP44 a chráni ich tak pred vniknutím veľmi malých predmetov a vody striekajúcej zo všetkých smerov pod úrovňou stropu.

Circular recessed compact fluorescent downlight luminaire with close fitting cover glass giving an ingress protection of IP44, preventing the ingress of very small particles of dirt and splash proof from any angle below the ceiling line.

Eingebauten Rundleuchten für kompakte Leuchtstofflampen sind mit einem Deckglas geschlossen, welches ihnen Schutz IP44 vor Eindringen fester Gegenstände und Wasser leistet und damit schützt es sie gegen Eindringen von sehr kleinen Gegenständen und Wasser, welches von allen Richtungen unter der Deckenebene spritzt.

## TUBUS

**Svietidlá Tubus sú určené pre inštaláciu na stropy ako prisadené svietidlá. Ponúkajú bohaté príslušenstvo a rôzne typy optických systémov.**

### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela), iná povrchová úprava - RAL 7001 (strieborná šedá), chrómová alebo zlatá je možná na požiadanie

**Reflektor:** lesklý hliník

**Kryt reflektora (rad 292):** kalené pieskované sklo

**Obruč (rad 292):** hliníkový odliatok, povrchovo upravený elektrostaticky nanášanou práškovou farbou RAL 9003 (signálna biela)

Uchytenie svietidla na strop je vyriešené prostredníctvom držiaka v ktorom sú dva otvory pre skrutky. Obruč s krycím sklom (rad 292) sa k telu svietidla uchyťava pootočením v dvoch fixačných bodoch. Mriežka (rad 294) je v svietidlách uchytená pomocou trooch pružín, dekoratívne sklo (rad 293) je prichytené k svietidlu prostredníctvom troch dekoračných skrutiek. Tieto systémy uchytenia umožňujú rýchlu beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na stranách 180-183, v kapitole OPTICS.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: kompaktné žiarivky TC-D/TC-DEL a TC-T/TC-TEL (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovou jednotkou s 1 hodinovou autonómnou prevádzkou (len verzie ECG)

### PRÍSLUŠENSTVO

- široká ponuka dekoračných prvkov a skiel (bližší popis v časti Downlight and Tubus accessories)

## TUBUS

The Tubus range of light fixtures is designed for ceiling installations as surface mounted lighting fittings. It offers a wide range of accessories and various types of optical systems.

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white), other finishes - RAL 7001 (white aluminium), chrome or gold on request

**Reflector:** polished aluminium

**Reflector cover (292 range):** hardened, sandblasted glass

**Ring (292 range):** aluminium casting, electrostatic powder coat finish RAL 9003 (signal white)

Ceiling attachment of the light fixture is done using a holder containing two openings for screws. The cover glass ring (292 range) is attached to the body using a twist at the two points of fixation. The grid (294 range) is attached using three springs and the decorative glass (293 range) is attached using three decorative screws. These attachment systems allow fast, tool-free lamp replacement. Further description of individual optic types is listed on pages 180-183, in section OPTICS.

### WIRING

Light fixtures can be equipped with:

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: compact fluorescent lamps TC-D/TC-DEL and TC-T/TC-TEL (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> diameter
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- an emergency version of light fixtures with autonomous operation of 1 hour is available on request (only EVG versions)

### ACCESSORIES

- a wide range of decorative elements and glass types (detailed description in Downlight and Tubus Accessories chapters)

## TUBUS

Die Tubus-Leuchten sind zum Einbau in die Decken als Anbauleuchten bestimmt. Sie bieten ein breites Zubehör und verschiedene Typen der optischen Systeme an.

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß), andere Oberflächenbehandlung - RAL 7001 (Silbergrau), Chrom- oder Gold oberflächenbehandlung ist auf Wunsch möglich

**Reflektor:** glänzendes Aluminium

**Reflektordeckel (Reihe 292):** sandgestrahltes Hartglas

**Einfassung (Reihe 292):** Aluminiumguß, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe RAL 9003 (Signalweiß)

Leuchte werden in die Decke mit einem Halter befestigt, in dem es zwei Öffnungen für Schrauben gibt. Die Einfassung mit Deckglas (Reihe 292) wird an Leuchtenkörper mit kleiner Drehung in zwei Fixierungspunkten befestigt. Der Raster (Reihe 294) ist an die Leuchte mit drei Federn befestigt, Dekorglas (Reihe 293) ist zur Leuchte mit drei Dekorationsschrauben befestigt. Diese Befestigungssysteme ermöglichen schnellen Austausch der Lichtquellen ohne Werkzeug.

Nähere Beschreibung von einzelnen Optiktypen ist an Seiten 180-183 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind nicht standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

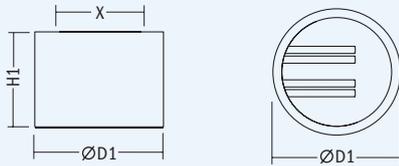

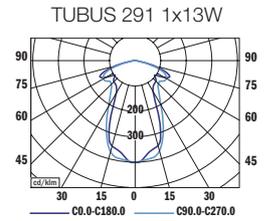

- Lichtquellen: kompakte Leuchtstofflampen TC-D/TC-DEL und TC-T/TC-TEL (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht, Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Leuchte können auf Wunsch mit einer Noteinheit mit Autonombetrieb von 1 Stunde ausgerüstet werden (nur ECG version)

### ZUBEHÖR

- ein breites Angebot von Dekorationselementen und Gläsern (eine nähere Beschreibung im Teil Downlight and Tubus accessories)

## PRO

### TUBUS PRO

Svietidlá Tubus PRO sú určené pre inštaláciu na stropy ako prisadené svietidlá. Svetidlá Tubus PRO Pendant sú závesné svietidlá určené pre inštaláciu na lankách. Kombinácia svietidla Tubus PRO a difúzora z pieskovaného skla, pod ktorým je umiestnený ďalší svetelný zdroj, zabezpečuje priamo/nepriamu distribúciu svetelného toku a príjemný dekoratívny vzhľad svietidla.

#### KONŠTRUKCIA

**Teleso svietidla:** hliníkový výlisok, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9010 (čistá biela), RAL 9006 (biely hliník) na požiadanie

**Reflektor:** fazetový hliník

**Obruč:** hliníkový odliatok, povrchovo upravený elektrostaticky nanášanou práškovou farbou RAL 9010 (čistá biela)

**Inštaláčna doska:** pozinkovaný plech, držiaky proti vytrhnutiu vodičov zo svorkovnice, dve gumené prechodky pre vodiče (možná priebežná montáž)

**Vrchný difúzor (rad Pro Pendant):** kalené pieskované sklo

Uchytenie svietidla na strop (rad PRO) je vyriešené prostredníctvom troch otvorov na inštaláčnej doske. Obruč sa k telu svietidla uchyťava pootočením v troch fixačných bodoch. Svetidlo PRO Pendant je zavesené prostredníctvom štandardného závesného príslušenstva.

Vyhotovenie svietidla umožňuje rýchlu beznástrojovú výmenu svetelných zdrojov.

#### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- elektronickými predradníkmi pre žiarivky, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi pre žiarivky, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)
- elektronickými predradníkmi pre výbojky

**Ostatné komponenty:**

- svetelné zdroje: kompaktné žiarivky TC-TEL, metal-halogenidové výbojky HIT (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovou jednotkou s 1 hodinovou autonómnou prevádzkou

#### PRÍSLUŠENSTVO

- rôzne typy pieskovaných skiel pre rad PRO Pendant
- široká ponuka dekoračných prvkov a skiel (bližší popis v časti PRO ACCESSORIES 138/139)
- široká ponuka krycích skiel identických s krycimi sklami pre svietidlo Downlight PRO 212 (strana 135)

## TUBUS PRO

The Tubus PRO range is designed for ceiling installations as surface mounted light fixtures. The Tubus PRO Pendant are pendant light fixtures designed for suspended installations on wires. The combination of the Tubus PRO light fixtures and a sandblasted glass diffuser, which covers the light source, provides direct/indirect distribution of the light beam and a convenient decorative appearance for the light fixture.

### CONSTRUCTION

**Housing:** aluminium casting, electrostatic powder coat finish – basic shade RAL 9010 (pure white), RAL 9006 (white aluminium) on request

**Reflector:** facet aluminium

**Ring:** aluminium casting, electrostatic powder coat finish RAL 9010 (pure white)

**Installation plate:** galvanised sheet metal, holders to prevent the conductors from loosening off the connection box, two rubber reducing adapters for the conductors (through wiring possible)

**Top diffuser (Pro Pendant range):** hardened, sandblasted glass

Ceiling attachment of the light fixture (PRO range) is done using three openings in the installation plate. The ring is attached to the body using a twist at the three points of fixation. The PRO Pendant light fixture is suspended using standard suspension accessories.

Construction of the light fixture allows fast, tool-free lamp replacement.

### WIRING

**Light fixtures can be equipped with:**

- electronic control gears for fluorescent lamps, standard class EEI=A2
- dimmable electronic control gears for fluorescent lamps, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)
- electronic control gears for discharge lamps

**Other components:**

- lamps: compact fluorescent lamps TC-TEL, metal-halide discharge lamps HIT (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- an emergency version of light fixtures with autonomous operation of 1 hour is available on request

### ACCESSORIES

- various types of sandblasted glass for the PRO Pendant range
- a wide range of decorative elements and glass types (detailed description in chapter PRO ACCESSORIES on page 138/139)
- a wide range of glass covers identical as for Downlight PRO 212 (page 135)

## TUBUS PRO

Die Leuchten Tubus PRO sind zum Einbau auf die Decken als Anbauleuchten bestimmt. Die Leuchten Tubus PRO Pendant sind Hängeleuchten, die zur Installation auf Seilen bestimmt sind. Kombination der Leuchte Tubus PRO und des Diffusors aus sandgestrahltem Glas, unter dem eine weitere Lichtquelle angebracht ist, gewährleistet direkte/indirekte Verteilung des Lichtstromes und angenehmes dekoratives Aussehen der Leuchte.

### KONSTRUKTION

**Leuchtenkörper:** Aluminiumpressteil, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9001 (Reinweiß), RAL 9006 (Weißaluminium) auf Wunsch

**Reflektor:** facettiertes Aluminium

**Einfassung:** Aluminiumguß, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe RAL 9010 (Reinweiß)

**Installationsplatte:** verzinktes Blech, Halter gegen Ausreißen der Leiter aus der Klemmleiste, zwei Gummidurchführungen für Leiter (möglicher durchgehender Einbau)

**Oberdiffusor (Reihe Pro Pendant):** sandgestrahltes Hartglas

Leuchte werden in die Decke (Reihe PRO) durch drei Öffnungen in der Installationsplatte befestigt. Die Einfassung wird an Leuchtenkörper mit kleiner Drehung in drei Fixierungspunkten befestigt. Die Leuchte PRO Pendant wird mit einem Standardhängezubehör angehängt.

Die Ausführung der Leuchte ermöglicht schnellen Austausch der Lichtquellen ohne Werkzeug.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit elektronischen Vorschaltgeräten für Leuchtstofflampen, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten für Leuchtstofflampen, Klasse EE1=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)
- mit elektronischen Vorschaltgeräten für Entladungslampen

**Andere Komponente:**

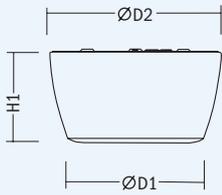

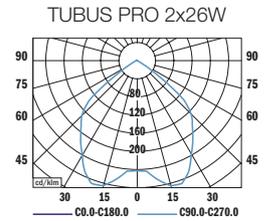

- Lichtquellen: kompakte Leuchtstofflampen TC-TEL, Metall-Halogenid-Entladungslampen HIT (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Leuchte können auf Wunsch mit einer Noteinheit mit Autonombetrieb von 1 Stunde ausgerüstet werden

### ZUBEHÖR

- verschiedene Typen der sandgestrahlten Gläser für die Reihe PRO Pendant
- ein breites Angebot von Dekorationselementen und Gläsern (eine nähere Beschreibung im Teil PRO ACCESSORIES an der Seite 138/139)
- ein breites Angebot von Schutzgläsern identisch als für Downlight PRO 212 an der Seite 135

# VARIO

## VARIO

Systém Vario je variabilný osvetľovací systém určený na závesnú montáž pomocou výškovo nastaviteľných lankových závesov. Veľká variabilnosť systému umožňuje spĺňať rôzne požiadavky na dosiahnutie kvalitného osvetlenia, či už sa jedná o hlavné alebo o akcentačné osvetlenie.

Na hliníkové profily je možné pomocou plastových boxov uchytiť svietidlá Modul EXE. Tieto svietidlá ponúkajú voľbu rôznych typov parabolických mriežok ako aj možnosť kombinácie priamo/nepriameho osvetlenia. Zvlášť efektívny nástroj na osvetľovanie stropov je mriežka TWIN so špeciálne tvarovanými pozdĺžnymi lamelami, ktoré usmerňujú svetelný tok rovnomerne smerom nahor. Trojzdrojová varianta svietidla - Vario Square, sa inštaluje pomocou štyroch výškovo nastaviteľných lankových závesov. Varianta svietidla Vario Mini ponúka dve možnosti inštalácie: nástennú (Vario Mini) a závesnú (Vario Modul Mini). Jednotlivé bunky svietidiel v systéme Vario je možné vďaka štyrom kĺbovým mechanizmom natáčať do ľubovoľného smeru. Všetky bodové svetelné zdroje sú k dispozícii v mnohých výkonových variantách a niekoľkých uhloch vyžarovania.

### KONŠTRUKCIA

**Teleso svietidla:** základ systému tvoria dva nosné hliníkové profily, povrchovo upravené elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9006 (biely hliník, jemná štruktúra)

**Koncovky hliníkových profilov:** ABS Cycolac, šedá s kovovým pigmentom

**Spojky profilov:** pozinkovaný plech

**Kĺbové spojky profilov:** ABS Cycolac, šedá s kovovým pigmentom

**Teleso svietidla (Vario Track 11/Vario Track 12/Vario Track 13):** tlakovo liaty hliník, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9006 (biely hliník, jemná štruktúra)

**Mriežky (Vario Track EXE):** lesklé alebo matné hliníkové parabolické mriežky PAR, PAR MAT, PAR DIR/INDIR, PAR MAT DIR/INDIR, TWIN

**Reflektor (Vario Track EXE):** na požiadanie prídavný vrchný reflector pre mriežky PAR (verzia REFLEX)

**Plastové predradné boxy (Vario Track):** dve šírky boxu, ABS Cycolac, šedá s kovovým pigmentom

**Rám svietidla (Vario Square):** hliníkový profil

**Predradný box (Vario Square):** plechový výlisok, povrchovo upravený elektrostaticky nanášanou práškovou farbou – základný odtieň RAL 9006 (biely hliník, jemná štruktúra)

**Teleso svietidla (Vario Mini):**

**Inštalácia doska:** pozinkovaný plech, držiaky proti vytrhnutiu vodičov zo svorkovnice, dve gumené prechodky pre vodiče (možná priebežná montáž)

Hliníkové profily je možné spájať priebežne prostredníctvom spojok alebo pod rôznymi uhlami pomocou kĺbov. V hliníkových profiloch je vedená kabeláž ku svietidlám (kabeláž nie je súčasťou dodávky a je potrebné ju objednať zvlášť). Elektronické transformátory alebo predradníky sú umiestnené v plastových boxoch.

Systém Vario umožňuje rýchlu beznástrojovú výmenu všetkých používaných svetelných zdrojov. Bližší popis jednotlivých typov optík je uvedený na konci kapitoly VARIO.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- stmievateľnými 12V elektronickými transformátormi
- elektronickými predradníkmi pre výbojky
- elektronickými predradníkmi pre žiarivky, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi pre žiarivky, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: nízkonapäťové halogénové žiarovky QR 111, metal-halogenidové výbojky CDM-R111, lineárne žiarivky T5 (16mm), vysokosvietiace diódy LED-R111 (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče so spletaným medeným jadrom prierezu 1,5 mm<sup>2</sup> v silikónovej izolácii (teplotná odolnosť do 130°C)
- napájacie vodiče vedúce k plastovým predradným boxom sú ukončené rýchlosvorkami WAGO pre rýchle elektrické pripojenie vodičov prierezu max. 1,5 mm<sup>2</sup>
- svietidlá Modul EXE je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

### PRÍSLUŠENSTVO

- troj alebo päť žilové vedenie s pevným medeným jadrom prierezu 1,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C) pre možnosť priebežnej montáže v hliníkových profiloch, štandardne dĺžky 5m a 10m
- stmievače k halogénovým žiarovkám

## VARIO

The Vario system is a variable lighting system designed for pendant installation using adjustable suspension accessories. The great flexibility of the system enables it to comply with various requirements of quality lighting, whether it is intended as general lighting or accentuated lighting.

Modul EXE light fixtures can be attached to aluminium profiles using plastic boxes. These light fixtures offer the choice of various types of parabolic louvers, as well as possible combinations of direct/indirect lighting. Especially spectacular tool for ceiling lighting is the TWIN louver with specially shaped longitudinal lamellas, which direct the light beam evenly upwards. A three-source variant of the light fixture – Vario Square – is installed using four adjustable wires. The Vario Mini variant provides two installation options: wall-mounted (Vario Mini) and pendant (Vario Modul Mini). Individual light fixture cells in the Vario system can be deflected in any direction thanks to the four jointed mechanisms. All light sources are available in various output variants and several beam angles.

### CONSTRUCTION

**Housing:** the base of the system consists of two supporting aluminium profiles, with an electrostatic powder coat finish – basic shade RAL 9006 (white aluminium, fine structure)

**Aluminium profile ends:** ABS Cyclocac, grey with metal pigment

**Profile connectors:** galvanised metal

**Jointed profile connectors:** ABS Cyclocac, grey with metal pigment

**Light fixture body (Vario Track 11/Vario Track 12/Vario Track 13):** die cast aluminium, with an electrostatic powder coat finish – basic shade RAL 9006 (white aluminium, fine structure).

**Louvers (Vario Track EXE):** polished or matt aluminium parabolic louvers PAR-V, PAR MAT-V, PAR-V DIR/INDIR, PAR MAT-V DIR/INDIR and TWIN

**Reflector (Vario Track EXE):** additional top reflector for PAR louvers (REFLEX version) available on request

**Plastic boxes for control gear (Vario Track):** two widths of box, ABS Cyclocac, grey with metal pigment

**Light fixture frame (Vario Square):** aluminium profile

**Control gear box (Vario Square):** sheet steel, with an electrostatic powder coat finish – basic shade RAL 9006 (white aluminium, fine structure).

**Light fixture body (Vario Mini):**

**Installation plate:** galvanised sheet steel, holders to prevent the conductors from loosening off the connection box, two rubber reducing adapters for the conductors (through wiring possible)

Aluminium profiles can be connected using connectors or under various angles using joints. Aluminium profiles contain cabling for lamps (cabling is not part of delivery and must be ordered separately). Electronic transformers or control gears are situated in plastic boxes.

The Vario system allows fast, tool-free replacement of all used light sources. Further description of the individual types of optics is listed at the end of the VARIO section.

### WIRING

Light fixtures can be equipped with:

- dimmable 12V electronic transformers
- electronic control gears for discharge lamps
- electronic control gears for fluorescent lamps, standard class EEI=A2
- dimmable electronic control gears for fluorescent lamps, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: QR 111 low-voltage halogen lamps, CDM-R111 metal-halide discharge lamps, linear fluorescent lamps T5 (16mm), high-brightness diodes LED-R111 (light sources must be ordered separately)
- flexible copper internal conductors, silicon insulated (heat resistant up to 180°C) with 1.5 mm<sup>2</sup> cross-section
- connection conductors leading to plastic ballast boxes are finished with WAGO clamps for fast electrical connection of conductors of up to 1.5 mm<sup>2</sup> cross-section
- emergency version of Modul EXE light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- PVC insulated solid copper three- or five-core conductor with 1.5 mm<sup>2</sup> diameter (heat resistant up to 90°C) for the option of through wiring in aluminium profiles, standard lengths 5m and 10m
- dimmers for halogen lamps

## VARIO

Das System Vario ist ein variables Beleuchtungssystem, das zum Hängeeinbau mit höheinstellbaren Seilaufhängungen bestimmt ist. Große Systemvariabilität ermöglicht verschiedene Forderungen an die Erreichung der qualitätsvollen Beleuchtung zu erfüllen, ob es um Hauptbeleuchtung oder um Akzentbeleuchtung geht.

An die Aluminiumprofile können mit Kunststoffboxen die Leuchten Modul EXE befestigt werden. Diese Leuchten bieten eine Auswahl an verschiedene parabolische Raster und die Möglichkeit der Kombination direkter/indirekter Beleuchtung an. Ein besonders effektives Mittel zur Beleuchtung der Decken ist der Raster TWIN mit speziell verformten Längslamellen, die den Lichtstrom gleichmäßig nach oben richten. Eine Dreiquellvariante der Leuchte – Vario Square wird mittels vier höheinstellbarer Seilaufhängungen installiert. Die Variante der Leuchte Vario Mini bietet zwei Möglichkeiten der Installation an: eine Wandinstallation (Vario Mini) und eine Hängeinstallation (Vario Modul Mini). Die einzelnen Zellen der Leuchten im System Vario können dank vier Gelenkgetrieben in beliebige Richtung gedreht werden. Alle punkttartigen Lichtquellen stehen in vielen Leistungsvarianten und einigen Strahlungswinkeln zur Verfügung.

### KONSTRUKTION

**Leuchtenkörper:** die Systemgrundlage bilden zwei Aluminiumtragprofile, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9006 (Weißaluminium, feine Struktur)

**Endstücke der Aluminiumprofile:** ABS Cyclocac, grau mit Metallpigment

**Verbindungen der Profile:** verzinktes Blech

**Gelenkkupplungen der Profile:** ABS Cyclocac, grau mit Metallpigment

**Leuchtenkörper (Vario Track 11/Vario Track 12/Vario Track 13):** Druckgußaluminium, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9006 (Weißaluminium, feine Struktur)

**Raster (Vario Track EXE):** glänzende oder matte parabolische Aluminiumraster PAR-V, PAR MAT-V, PAR-V DIR/INDIR, PAR MAT-V DIR/INDIR, TWIN

**Reflektor (Vario Track EXE):** ein zusätzlicher Oberreflektor für Raster PAR-V (Ausführung REFLEX) auf Wunsch

**Kunststoff-Vorschaltgeräteboxen (Vario Track):** zwei Boxbreiten, ABS Cyclocac, grau mit Metallpigment

**Leuchtenrahmen (Vario Square):** Aluminiumprofil

**Vorschaltbox (Vario Square):** Blechpressteil, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9006 (Weißaluminium, feine Struktur)

**Leuchtenkörper (Vario Mini):**

**Installationsplatte:** verzinktes Blech, Halter gegen Ausreißen der Leiter aus der Klemmleiste, zwei Gummidurchführungen für Leiter (möglicher durchgehender Einbau)

Die Aluminiumprofile können durchlaufend mit Verbindungsstücke oder unter verschiedenen Winkeln mit Gelenke verbunden werden. Die Verkabelung zu den Leuchten wird in den Aluminiumprofilen geführt (die Verkabelung ist kein Bestandteil der Lieferung und sie ist extra zu bestellen). Elektronische Transformator oder Vorschaltgeräte sind in Kunststoffboxen angebracht.

Das System Vario ermöglicht schnellen Austausch aller verwendeten Lichtquellen ohne Werkzeug. Nähere Beschreibung von einzelnen Optiktypen ist am Ende des Teil VARIO angeführt.

### ELEKTRISCHE AUSTRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit elektronischen 12 V-Dimmertransformatoren
- mit elektronischen Vorschaltgeräten für Entladungslampen
- mit elektronischen Vorschaltgeräten für Leuchtstofflampen, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten für Leuchtstofflampen, Klasse EEI=A1 (Vorschaltgeräte können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

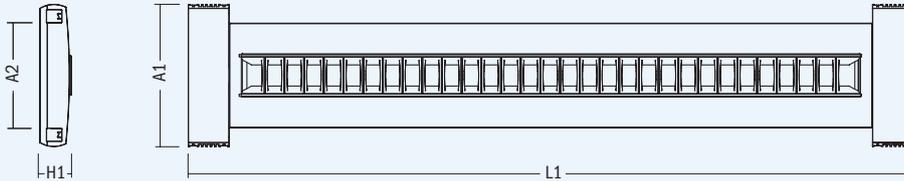

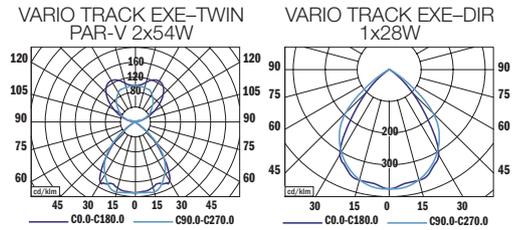

- Lichtquellen: Niederspannung-Halogenlampen QR 111, Metall-Halogenid Entladungslampen CDM-R111, lineare Leuchtstofflampen T5 (16 mm), hoch-hell Dioden LED-R111 (die Lichtquellen sind extra zu bestellen)
- nennleiter mit einem gespeistem Kupferkern mit einem Durchmesser von 1,5 mm<sup>2</sup> in einer Silikonisolierung (Wärmewiderstand bis zu 180°C)
- die zu den Kunststoff-Vorschaltboxen geführten Versorgungsleiter sind mit Schnellklemmen WAGO für schnellen Anschluß der Leiter mit einem Durchmesser von max. 1,5 mm<sup>2</sup> abgeschlossen
- die Modul EXE-Leuchten können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

### ZUBEHÖR

- drei- oder fünfadriges Leitung mit festem Kupferkern mit einem Durchmesser von 1,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C) für die Möglichkeit eines durchgehenden Einbaues in Aluminiumprofilen, Standardlängen von 5m und 10m
- Dimm-Modulen zum Halogenlampen

Large-diameter low-voltage reflector halogen lamp

Ceramic metal-halide lamp

High Brightness LED spot - 7 x 3W, 700mA

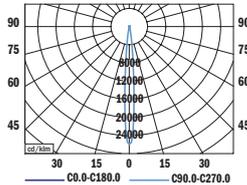

QR 111 lamps have high-purity faceted aluminum reflector with excellent focusing properties and extremely tight beam angles of as little as 4° for enormous luminous intensity so that objects can be highlighted even in bright surroundings. Each lamp has a cap for reduced glare and easy of handling. Customers with higher demands can choose halogen lamps (up to 65W) with IRC technology – these lamps offer energy savings of up to 48% compared with standard QR 111 lamps of the same brightness. Average lamp life also rise up from 3000 to 4000 hours. For better thermal conditions in luminaires, QR 111 lamps help to solve this problem – their aluminium reflector not only directs the light forwards but also the heat. Low-pressure halogen burner technology permits the lamp to be safely used in open luminaires. UV block quartz reduces fading of goods on display.

CDM-R111 metal-halide lamps provides an attractive alternative to the immensely popular QR 111 halogen display lamp. The reflector is of an attractive multi-faceted spun aluminium design and mounted at its focus is the arc tube. The glare shield cap is affixed over the top of the lamp and screens the arc tube from direct view. Beams of light can be produced which have a very sharp cutoff around the edge, and consequently the glaring intensity of the arc tube can only be seen through its reflections in the mirror, these only being visible when staring directly into the beam. The large diameter of the reflector also allows tighter beam angles to be attained with ease, permitting luminaires project their light from greater distances and be positioned out of view. A new GX8.5 cap of the twist-lock style is fitted to the lamp to facilitate replacement at end of life.

Luminous efficacy of LEDs was improved at a rapid rate, making LEDs more and more suitable for general lighting tasks. With luminous flux of 490 - 560 lumen, LED spots are interesting alternative to classic light sources. They are suitable for being built in standard QR 111 downlights. Different lens degrees are available: narrow, middle or wide beam. White LED spots are available as a standard. LED spots are available in 8+8 shades of white with colour temperatures from 2580K to 8000K. On request other LED colours are possible. Their major economic benefits are thanks to very low energy consumption, long life and practically no maintenance.

## FUTURO

Svietidlá Futuro sú určené pre inštaláciu do podhládov alebo sadrokartónových stropov. Svetidlo sa vyrába v mnohých prevedeniach a ponúka viaceré varianty usporiadania svetelných zdrojov – od jednozdrojových až po štvorzdrojové, možná je kombinácia s kompaktnou žiarivkou v parabolickej mriežke uprostred. Každá halogénová žiarovka v svietidle môže byť individuálne nasmerovaná do ľubovoľného smeru.

### KONŠTRUKCIA

**Teleso svietidla:** povrchovo upravený pozinkovaný plech (šedá perleť). Držiaky halogénových žiaroviek sú hliníkové odliatky.

**Mriežky:** hliníková parabolická mriežka PAR

Na spodnej strane svietidla je zvonku upevnená skrutkovacia svorkovnica spolu s držiakom proti vytrhnutiu vodičov zo svorkovnice. Otvory pre vstup vodičov do svietidla sú opatrené plastovými prechodkami.

Uchytenie svietidla v podhlade je vyriešené prostredníctvom štyroch úchytoch, nastaviteľných pre rôzne hrúbky stropu. Beznástrojová výmena svetelných zdrojov.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- stmievateľnými 12V elektronickými transformátormi (transformátory môžu byť riadené analógovým, digitálnym alebo DALI signálom)
- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: nízkonapäťové halogénové žiarovky QR 111, kompaktné žiarivky TC – L (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- skrutkovacia svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny, núdzová jednotka je umiestnená na špeciálnej montážnej doske mimo svietidla

## FUTURO

The Futuro range of light fixtures is designed for installations into plasterboard ceilings. The light fixture is manufactured in many versions and provides various variants of light source arrangement – from single-source to four-source; the combination of a compact fluorescent lamp in a centrally located parabolic louvre is also possible. Each halogen lamp in the light fixture can be individually tilted to any direction.

### CONSTRUCTION

**Housing:** surface finished galvanised sheet steel (iridescent grey). Halogen lamp holders are from die cast aluminium.

**Louvers:** aluminium parabolic louvre PAR

Outside, on the bottom of the light fixture, there is a screw connection terminal attached together with a holder preventing the conductors from being pulled off the terminal. Conductor openings are equipped with plastic reducing adapters.

Ceiling attachment of the light fixture is done using four holders, adjustable for various ceiling widths. Tool-free replacement of light sources.

### WIRING

**Light fixtures can be equipped with:**

- dimmable 12V electronic transformers (transformers can be controlled with analogue, digital or DALI signal)
- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: low-voltage halogen lamps QR 111, compact fluorescent lamps TC-L (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screw terminal block allows connecting conductors up to 2.5 mm<sup>2</sup> cross-section
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request, the emergency version is placed on a special installation plate apart from the light fixture

## FUTURO

Die Futuro-Leuchten sind zur Installation in die Untersichte oder Gipskartondecken bestimmt. Die Leuchten werden in vielen Ausführungen hergestellt und bieten mehrere Varianten der Anordnung von Lichtquellen – von Einquell- bis zur Vierquellenanordnung an, auch die Kombination mit einer kompakten Leuchtstoffröhre in einem parabolischen Raster in der Mitte ist möglich. Jede Halogenlampe in der Leuchte kann individuell in beliebige Richtung gerichtet sein.

### KONSTRUKTION

**Leuchtenkörper:** verzinktes Blech mit Oberflächenbehandlung (graues Perlmutter). Halter der Halogenlampen sind aus Aluminiumguss

**Raster:** parabolischer Aluminiumraster PAR

An der Unterseite der Leuchte ist eine Schraubklemmleiste von außen zusammen mit einem Halter gegen Ausreißen der Leiter aus der Klemmleiste befestigt. Die Öffnungen für die Einführung der Leiter in die Leuchte sind mit Kunststoffdurchführungen versehen.

Leuchte werden in der Untersicht ist mit vier Schellen befestigt, die für verschiedene Deckendicken einstellbar sind. Der Austausch der Lichtquellen erfolgt ohne Werkzeug.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

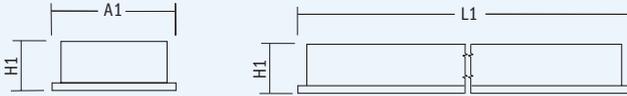

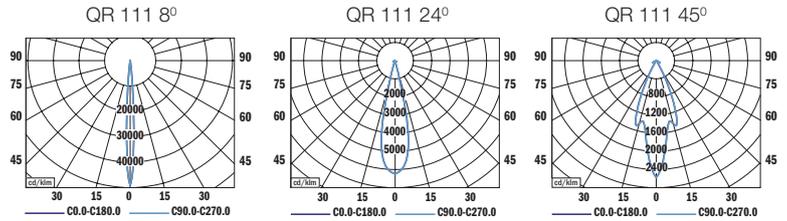

- mit elektronischen Dimmertransformatoren 12 V (Transformatoren können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)
- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschalter können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: Niederspannung-Halogenlampen QR 111, kompakte Leuchtstofflampen TC-L (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine Schraubklemmleiste ermöglicht Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Leuchten können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden, die Noteinheit ist an einer speziellen Einbauplatte außer der Leuchte angebracht

## AVANT

**Závesné svietidlá nekonvenčného dizajnu s vynikajúcimi technickými vlastnosťami. Avant ponúka rozličné možnosti kombinácie optických systémov ako aj možnosť priebežnej montáže.**

### KONŠTRUKCIA

**Teleso svietidla:** extrudovaný hliník, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9006 (biely hliník, jemná štruktúra)

**Koncovky svietidla:** hliníkový odliatok

V hliníkových koncovkách svietidiel je umiestnený mechanizmus umožňujúci zmenu dĺžky lankového závesu svietidla. V každej hliníkovej koncovke je otvor pre vstup napájacieho kábla, krytý dekoratívnou plastovou koncovkou. Koncovky sú k telesu svietidla prichytené sponou z nerezovej ocele.

**Mriežky:** lesklá alebo matná hliníková parabolická mriežka PAR-V/PAR MAT-V

**Difúzory:** číre (PMMA) alebo opálové (acryl-satiné PMMA) prevedenie

**Reflektory:** symetrický alebo asymetrický hliníkový reflektor

**Koncovky difúzorov:** číre (PC) alebo opálové (SMMA) prevedenie

**Koncovky reflektorov:** šedé (ABS) alebo číre (SMMA) prevedenie (číre len pre asymetrický reflektor)

**Nosná doska:** extrudovaný hliník. Doska sa nasúva do drážky telesa svietidla. Všetky elektrické komponenty sú umiestnené na plechovej inštaláčnej doske uchytenej na nosnej doske svietidla.

Difúzory a reflektory doplnené o plastové koncovky sú uchytené v drážke hliníkoveho telesa svietidla. Plastové koncovky optického príslušenstva sú k reflektorom dotlačené pružinami ktoré sú schované v hliníkových koncovkách svietidiel. Parabolická mriežka je vsadená do priehľadného difúzora, ktorý ju chráni pred znečistením a zjednodušuje údržbu svietidla. Uchytenie optického systému umožňuje jednoduchý prístup do svietidla a beznástrojovú výmenu svetelných zdrojov. Pri použití inej koncovky svietidla je možné zapájať svietidlá AVANT za sebou do línie. Pri tejto variante prídubnú na inštaláčnu dosku v svietidle konektory umožňujúce rýchle spájanie jednotlivých svietidiel do priebežnej montáže.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- elektronickými predradníkmi, štandardne triedy EEL=A2
- stmievateľnými elektronickými predradníkmi, trieda EEL=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- 7-pólové konektory WAGO umožňujúce rýchle elektrické spojenie pri priebežnej montáži
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny (3h prevádzka nie je v ponuke pre 80W verzie a pre asymetrický reflektor)

## AVANT

**Pendant light fixtures with an unconventional design and excellent technical properties, Avant offers various options for combination of optical systems, as well as the possibility of continuous installation.**

### CONSTRUCTION

**Housing:** extruded aluminium, electrostatic powder coat finish – basic shade RAL 9006 (white aluminium, fine structure).

**Light fixture end caps:** aluminium casting

Aluminium end cap of the light fixture contain mechanisms allowing changes to the length of the light fixture wire. Each aluminium ending has an opening for a power cable, covered by a decorative plastic cover. The end caps are attached to the body using stainless steel fasteners.

**Louvers:** polished or matt aluminium parabolic louvre PAR-V/PAR MAT-V

**Diffuser:** pure (PMMA) or opal (acrylic-satin PMMA) finish

**Reflectors:** symmetrical or asymmetrical aluminium reflector

**Diffuser end caps:** pure (PC) or opal (SMMA) finish

**Reflector end caps:** grey (ABS) or pure (SMMA) finish (pure finish only for asymmetrical reflector)

**Carrying plate:** extruded aluminium. The plate is placed into the light fixture body groove. All electrical components are situated on the metal installation plate connected to the carrying plate.

Diffusers and reflectors equipped with plastic covers are attached to the aluminium body groove. Optical accessory plastic end caps are pushed to the reflectors by springs hidden in the aluminium endings. The parabolic louvre is placed into the transparent diffuser protecting it from dirt, which makes maintenance of the light fixture easier. Attachment of the optical system allows simple access to the light fixture and tool-free lamp replacement.

If another end cap of the light fixture is used, AVANT light fixtures can be connected in a line. In this case the installation plate includes connectors allowing fast connection of individual light fixtures in a continuous installation.

### WIRING

**Light fixtures can be equipped with:**

- electronic control gear, standard class EEI=A2
- dimmable electronic control gear, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless five pole terminal allows connecting conductors up to 2.5 mm<sup>2</sup> cross-section
- 7-pole WAGO connectors allowing fast electrical connection in continuous installations
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request (3hr operation is not available for 80W versions or for asymmetrical reflectors)

## AVANT

**Hängeleuchten mit unkonventionellen Design und ausgezeichneten technischen Eigenschaften. Avant bietet verschiedene Möglichkeiten der optischen Systeme und durchgehendes Einbauen an.**

### KONSTRUKTION

**Leuchtenkörper:** extrudiertes Aluminium, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9006 (Weißaluminium, feine Struktur)

**Endstücke der Leuchte:** Aluminiumguß

In den Aluminiumendstücken der Leuchte ist ein Mechanismus angebracht, der Änderung der Seilaufhängungslänge der Leuchte ermöglicht. In jedem Aluminiumendstück gibt es eine Öffnung für die Einführung des Speisekabels, zugedeckt mit einem dekorativen Kunststoffendstück. Die Endstücke sind am Leuchtenkörper mit einer Schelle aus rostfreiem Stahl befestigt.

**Raster:** ein glänzender oder matter parabolischer Aluminiumraster PAR-V/PAR MAT-V

**Diffusoren:** klare (PMMA) Ausführung oder Opalausführung (acryl-satiné PMMA)

**Reflektoren:** ein symmetrischer oder asymmetrischer Aluminiumreflektor

**Endstücke der Diffusoren:** klare Ausführung (PC) oder Opalausführung (SMMA)

**Endstücke der Reflektoren:** graue (ABS) oder klare (SMMA) Ausführung (klar nur für den asymmetrischen Reflektor)

**Tragplatte:** extrudiertes Aluminium. Die Platte wird in die Rille des Leuchtenkörpers eingesteckt. Alle elektrischen Komponente sind an der Blechinstallationsplatte angebracht, die an der Tragplatte der Leuchte befestigt ist.

Die Diffusoren und Reflektoren mit Kunststoffendstücken sind in der Rille des Aluminiumkörpers der Leuchte befestigt. Die Kunststoffendstücke des optischen Zubehörs werden an Reflektoren mit Federn angedrückt, die in den Aluminiumendstücken der Leuchten versteckt sind. Der parabolische Raster ist im durchsichtigen Diffusor angebracht, der ihn vor Verschmutzung schützt und Wartung der Leuchte vereinfacht. Die Befestigung des optischen Systems ermöglicht einen einfachen Zugang zur Leuchte und Austausch der Lichtquellen ohne Werkzeug.

Bei Verwendung eines anderen Endstückes der Leuchte können die Leuchten AVANT in einer Linie hintereinandergeschaltet werden. Bei dieser Variante wird die Installationsplatte in der Leuchte um Verbindungsstecker ergänzt, die schnelle Verbindung von einzelnen Leuchten in den durchgehenden Einbau ermöglichen.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

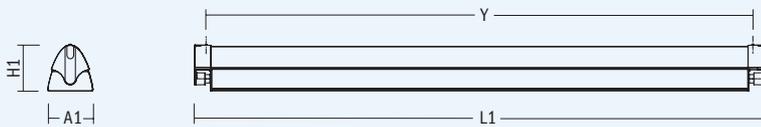

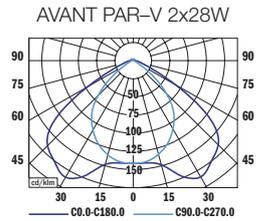

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten für Leuchtstofflampen, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), die Lichtquellen sind extra zu bestellen
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie fünfpolige Klemmleiste ermöglicht, die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- siebenpolige Verbindungsstecker WAGO, die einen schnellen elektrischen Anschluß beim durchgehenden Einbau ermöglichen
- Leuchte können auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden ausgerüstet werden (ein 3 Stunden-Betrieb ist für die Ausführung von 80W und für den asymmetrischen Reflektor nicht im Angebot)

# MODUL

## ESO

### MODUL ESO

**Trojžiarivkové svietidlo MODUL ESO predstavuje typického zástupcu kancelárskeho svietidla s veľmi nízkym profilom. Najväčšou výhodou svietidiel Modul je možnosť kombinácie priameho a nepriameho osvetlenia. Svietidlá sa montujú ako závesné pomocou závesného príslušenstva.**

#### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela), RAL 9006 (biely hliník) na požiadanie

**Mriežky:** hliníkové parabolické mriežky PAR-V, PAR MAT-V

**Reflektor:** na požiadanie možno všetky verzie doplniť o prídavné reflektory – jeden pre strednú žiarivku v parabolickej mriežke a dva pod žiarivky svietiace na strop (verzia REF)

**Difúzory (ESO G):** dve verzie kaleného pieskovaného skla – celé opieskované (sanded) alebo s vynechaným opieskovaním v strede pod mriežkou (clear)

Sklo je prichytené ku svietidlu prostredníctvom dekoračných skrutiek.

Pre výmenu strednej žiarivky je potrebné odstrániť vrchný plechový kryt nad mriežkou uchytený dvomi skrutkami. K zvyšným dvom žiarivkám je voľný prístup zvrchu.

Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

Modul ESO je v ponuke aj s prevažne nepriamou vyžarovacou charakteristikou – verzia S. Perforovaný spodný plech v tejto verzii prepustí časť svetelného toku smerom dole, väčšina svetelného toku je však vrchnými reflektormi usmernená v širokom zväzku smerom nahor. Kvôli údržbe je vrch svietidla prekrytý priehľadným plastovým krytom, výmena žiariviek je možná po jeho odstránení.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- elektronickými predradníkmi, štandardne triedy EEI=A2
  - stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)
- Svietidlá sú štandardne vybavené dvomi elektronickými predradníkmi, ktoré môžu byť na požiadanie zapojené pre samostatné ovládanie priamej a nepriamej zložky svetelného toku.

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

#### PRÍSLUŠENSTVO

- lankový vypínač
- rôzne typy závesného príslušenstva
- kombinovaný senzor (detektor prítomnosti + snímač denného osvetlenia + infračervený prijímač na diaľkové ovládanie) vsadený do telesa svietidla

## MODUL ESO

The MODUL ESO three-lamp light fixture represents a typical office light fitting with a very low profile. The greatest advantage of the Modul range is the possibility to combine direct and indirect lighting. The light fixtures are mounted as pendant using suspension accessories.

### CONSTRUCTION

**Housing:** steel sheet, electrostatic powder coat finish – basic shade RAL 9003 (signal white), RAL 9006 (white aluminium) on request

**Louvers:** aluminium parabolic louvers PAR-V, PAR MAT-V

**Reflector:** all versions are possible to be equipped with additional reflectors on request – one for central fluorescent lamp located in the parabolic louver and two under the fluorescent lamps, which illuminate the ceiling (REF version)

**Diffusers (ESO G):** two versions of hardened, sandblasted glass – completely sanded or without sandblasting centred below the louver (clear) Glass is attached to the light fixture using decorative screws.

To replace the middle lamp, it is necessary to remove the top metal cover above the grid, attached by two screws. The other two lamps are accessible from above.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

Modul ESO is offered also with mostly indirect lighting characteristics – S version. The perforated bottom sheet in this version transfers the part of the luminous flux down, but the most of the light will be directed by upper reflectors in a wide beam upwards. The top of the lamp is covered with transparent plastic cover due to maintenance, the fluorescent lamps can be replaced after removing of the cover.

### WIRING

Light fixtures can be equipped with:

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

Light fixtures are equipped with two electronic control gears as a standard, they can be pre-wired for independent control of direct and indirect part of luminous flux on request.

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- holders to prevent conductors from detaching from the terminal block, a rubber reducer for power cable
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- pull switch
- various types of suspension accessories
- combined sensor (motion detector + daylight sensor + infrared receiver for remote control) embedded in the body

## MODUL ESO

Die Dreileuchtstoffröhrenleuchte MODUL ESO stellt einen typischen Vertreter der Büroleuchten mit sehr niedrigem Profil dar. Der größte Vorteil der Leuchten Modul ist die Möglichkeit der Kombination direkter und indirekter Beleuchtung. Die Leuchten werden als Hängeleuchten mit Hängezubehör eingebaut.

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß), RAL 9006 (Weißaluminium) auf Wunsch

**Raster:** parabolische Aluminiumraster PAR-V, PAR MAT-V

**Reflektor:** es ist möglich auf Wunsch alle Ausführungen mit Zusatzreflektoren zu ergänzen – mit einem für die Mittelleuchtstofflampe im parabolischen Raster und mit zwei unter die auf die Decke leuchtenden Leuchtstofflampen (Ausführung REF).

**Diffusoren (ESO G):** zwei Ausführungen von sandgestrahltem Glas – ganz sandgestrahlt (sanded) oder ohne Sandstrahlung unter dem Raster (clear) Das Glas ist zur Leuchte mittels der Dekorationsschrauben befestigt.

Für den Austausch der mittleren Leuchtstoffröhre ist der über den Raster mit Schrauben befestigte obere Blechdeckel zu beseitigen. Freier Zugang zu restlichen Leuchtstoffröhren ist von oben möglich.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

Modul ESO ist im Angebot auch mit einer überwiegend indirekten Charakteristik – Ausführung S. Das Lochunterblech in dieser Ausführung läßt einen Teil des Lichtstromes nach unten durch, der Großteil des Lichtstromes ist jedoch mit Oberreflektoren in einem breiten Bündel nach oben gerichtet. Wegen der Wartung ist der Leuchtendeckel mit einem durchsichtigen Kunststoffdeckel verdeckt, der Leuchtstofflampenwechsel ist nach seiner Beseitigung möglich.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

Die Leuchten sind standardmäßig mit zwei elektronischen Vorschaltgeräten ausgerüstet, die für selbständige Steuerung direkter und indirekter Komponente des Lichtstromes auf Wunsch angeschlossen werden können.

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel
- die Leuchten können auf Wunsch mit Noteinheiten mit einem Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

### ZUBEHÖR

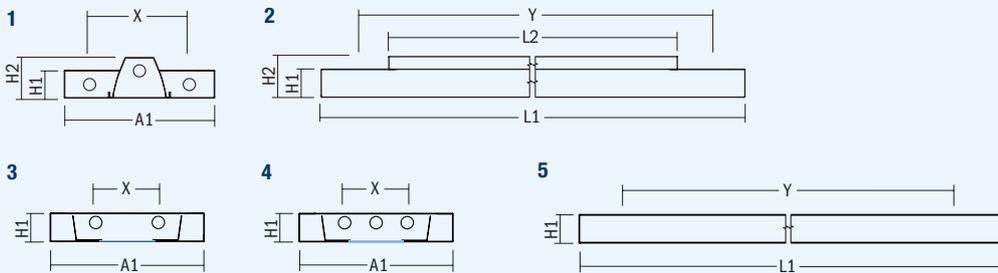

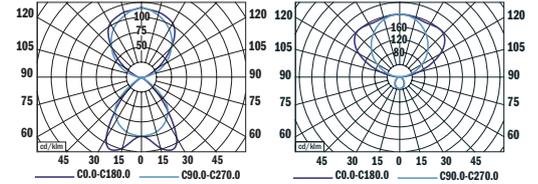

- Seilschalter
- Verschiedene Typen des Hängezubehörs
- kombinierter Sensor (Anwesenheitsdetektor + Aufnehmer der täglichen Beleuchtung + Infrarotempfänger mit Fernsteuerung), der im Leuchtenkörper angebracht ist

## EXE

### MODUL EXE

Jedno alebo dvojžiariarkové svietidlo MODUL EXE predstavuje typického zástupcu kancelárskeho svietidla s veľmi nízkym profilom. V závislosti od varianty poskytuje priamu alebo priamo/nepriamu distribúciu svetelného toku. Zvlášť efektívny nástroj na osvetľovanie stropov je mriežka TWIN so špeciálne tvarovanými pozdĺžnymi lamelami, ktoré usmerňujú svetelný tok rovnomerne smerom nahor. Svietidlá sa montujú ako závesné pomocou závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela), RAL 9006 (biely hliník) na požiadanie. Vrchný plech s otvormi nad žiarivkami pre DIR/INDIR verzie.

**Mriežky:** hliníkové parabolické mriežky PAR-V, PAR MAT-V, TWIN

**Reflektor:** pre všetky mriežky PAR na požiadanie prídavný vrchný reflektor (verzia REF)

Pre výmenu žiaroviek je potrebné odstrániť vrchný plech svietidla uchytený štyrmi skrutkami. Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- elektronickými predradníkmi, štandardne triedy EEL=A2
  - stmievateľnými elektronickými predradníkmi, trieda EEL=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)
- Na požiadanie môžu byť svietidlá vybavené dvomi elektronickými predradníkmi pre samostatné ovládanie priamej a nepriamej zložky svetelného toku.

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

#### PRÍSLUŠENSTVO

- lankový vypínač
- rôzne typy závesného príslušenstva
- kombinovaný senzor (detektor prítomnosti + snímač denného osvetlenia + infračervený prijímač na diaľkové ovládanie) vsadený do telesa svietidla

## MODUL EXE

**MODUL EXE one- or two-lamp light fixtures represent typical office light fittings with a very low profile. Depending on the variant, it provides direct or direct/indirect luminous flux distribution. An especially spectacular tool for ceiling illumination is the TWIN louver with specially shaped longitudinal lamellas that direct the light beam evenly upwards. The light fixtures are mounted as a pendant using suspension accessories.**

### CONSTRUCTION

**Housing:** steel sheet, electrostatic powder coat finish – basic shade RAL 9003 (signal white), RAL 9006 (white aluminium) on request; top sheet with perforations above the lamps for DIR/INDIR versions.

**Louvers:** aluminium parabolic louvers PAR-V, PAR MAT-V, TWIN

**Reflector:** additional top reflector (REF version) for all PAR louvers available on request

To replace lamps, it is necessary to remove the top metal cover, attached by four screws.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### WIRING

**Light fixtures can be equipped with:**

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

Light fixtures can be equipped with two electronic control gears for independent control of the direct and indirect part of the luminous flux on request.

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- holders to prevent conductors from detaching from the terminal block, a rubber reducer for power cable
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- pull switch
- various types of suspension accessories
- combined sensor (motion detector + daylight sensor + infrared receiver for remote control) embedded in the body

## MODUL EXE

**Eine Ein- oder Zweileuchtstoffröhrenleuchte MODUL EXE stellt einen typischen Vertreter der Büroleuchten mit sehr niedrigem Profil dar. Abhängig von der Variante bietet sie eine direkte oder direkte/indirekte Verteilung des Lichtstromes. Ein besonders effektives Mittel zur Beleuchtung der Decken ist der Raster TWIN mit speziell verformten Längslamellen, die den Lichtstrom gleichmäßig nach oben richten. Die Leuchten werden als Hängeleuchten mit Hängezubehör eingebaut.**

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß), RAL 9006 (Weißaluminium) auf Wunsch

Oberblech mit Öffnungen über den Leuchtstoffröhren für Ausführungen DIR/INDIR

**Raster:** parabolische Aluminiumraster PAR-V, PAR MAT-V, TWIN

**Reflektor:** für alle Raster PAR ein zusätzlicher Oberreflektor (Ausführung REF) auf Wunsch

Für den Austausch der Leuchtstoffröhren ist es notwendig, das mit vier Schrauben befestigte Oberblech der Leuchte zu beseitigen.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

Die Leuchten können mit zwei elektronischen Vorschaltgeräten für selbständige Steuerung direkter und indirekter Komponente des Lichtstromes auf Wunsch ausgerüstet werden.

**Andere Komponente:**

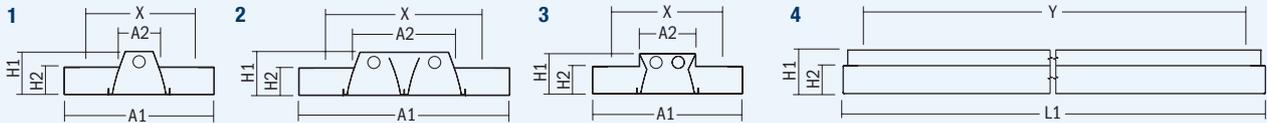

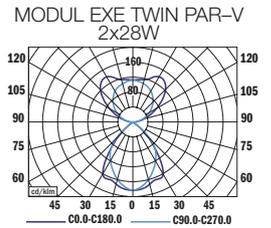

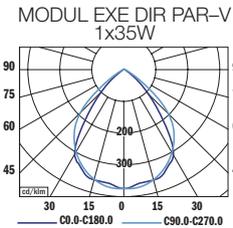

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht, Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel
- Leuchten können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

### ZUBEHÖR

- Seilschalter
- Verschiedene Typen des Hängezubehörs
- kombinierter Sensor (Anwesenheitsdetektor + Aufnehmer der täglichen Beleuchtung + Infrarotempfänger mit Fernsteuerung), der im Leuchtenkörper angebracht ist

## GAMMA

### MODUL GAMMA

Trojžiarivkové svietidlo MODUL GAMMA je ďalšie z radu kancelárskych svietidiel s veľmi nízkym profilom, ponúkajúce kombináciu priameho a nepriameho osvetlenia. Svietidlá sa montujú ako závesné pomocou závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela), RAL 9006 (biely hliník) na požiadanie. Pre rovnomerný rozptyl svetla je pod perforovanými tienidlom (verzia GAMMA S) vsunutá tenká polykarbonátová fólia.

**Mriežky:** hliníkové parabolické mriežky PAR-V, PAR MAT-V

Pre výmenu strednej žiarivky je potrebné pre obidve verzie svietidla dať dole vrchný plech uchytený dvomi dekoračnými skrutkami. Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- elektronickými predradníkmi, štandardne triedy EEI=A2
  - stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)
- Na požiadanie môžu byť svietidlá vybavené dvomi elektronickými predradníkmi pre samostatné ovládanie priamej a nepriamej zložky svetelného toku (verzia GAMMA PAR).

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

#### PRÍSLUŠENSTVO

- lankový vypínač
- rôzne typy závesného príslušenstva

## MODUL GAMMA

The **MODUL GAMMA three-lamp light fitting** is another product from the range of office light fixtures with a very low profile, offering a combination of direct and indirect lighting. The light fixtures are mounted as a pendant using suspension accessories.

### CONSTRUCTION

**Housing:** steel sheet, electrostatic powder coat finish – basic shade RAL 9003 (signal white), RAL 9006 (white aluminium) on request. For regular light diffusion, a thin polycarbonate foil is used under the perforated shade (GAMMA S version).

**Louvers:** aluminium parabolic grids PAR-V, PAR MAT-V

To replace the middle lamp in both versions, it is necessary to remove the top metal cover attached by two decorative screws. Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### WIRING

Light fixtures can be equipped with:

- an electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

The light fixtures can be equipped with two electronic control gears for independent control of the direct and indirect part of the luminous flux on request (GAMMA PAR version).

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- holders to prevent conductors from detaching from the terminal block, a rubber reducer for power cable
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- wire switch
- various types of pendant accessories

## MODUL GAMMA

Die **Dreileuchtstoffröhrenleuchte MODUL GAMMA** ist die nächste Leuchte aus der Reihe der Büroleuchten mit sehr niedrigem Profil, die die Kombination direkter oder indirekter Beleuchtung anbietet. Die Leuchten werden als Hängeleuchten mit Hängezubehör eingebaut.

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß), RAL 9006 (Weißaluminium) auf Wunsch

Für eine gleichmäßige Lichtstreuung ist unter dem Lochschirm (Ausführung GAMMA S) eine dünne Polykarbonatfolie eingelegt.

**Raster:** parabolische Aluminiumraster PAR-V, PAR MAT-V

Für Austausch der mittleren Leuchtstoffröhre ist es für beide Ausführungen notwendig, das durch Dekorationsschrauben befestigte Oberblech zu beseitigen.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

Die Leuchten können mit zwei elektronischen Vorschaltgeräten für selbständige Steuerung direkter und indirekter Komponente des Lichtstromes (Ausführung GAMMA PAR) auf Wunsch ausgerüstet werden.

**Andere Komponente:**

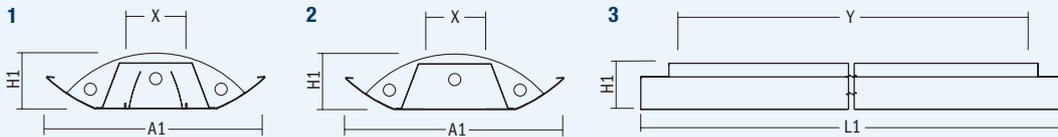

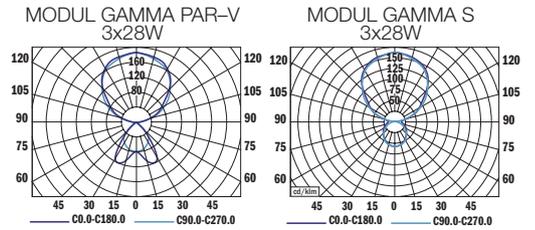

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht, Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel
- Leuchten können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

## DA

### MODUL DA

Hliníkové svietidlá MODUL DA s možnosťou voľby dvoch alebo troch žiarivek v sebe spájajú moderný dizajn a kombináciu priameho a nepriameho osvetlenia. MODUL DA ponúka možnosť rozšírenia o prídavný reflektor pre oddelené ovládanie týchto dvoch zložiek a väčší svetelný výkon. Pre rovnomerný rozptyl svetla, zvýšenie krytia a jednoduchšiu údržbu svietidla je vrchná časť svietidla prekrytá prieladným plastovým difúzorom. Svietidlá sa montujú ako závesné pomocou rôznych typov závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** extrudovaný hliník, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela), RAL 9006 (biely hliník, jemná štruktúra).

**Mriežky:** hliníkové parabolické mriežky PAR-V, PAR MAT-V

**Reflektor:** na požiadanie prídavný vrchný reflektor (verzia REF)

**Difúzor:** priehľadný vrúbkovaný PMMA

Mriežka je v svietidle uchytená pomocou pružín, vrchný difúzor je uchytený v drážke telesa svietidla - toto riešenie umožňuje jednoduchý prístup do svietidla a beznástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- elektronickými predradníkmi, štandardne triedy EEL=A2
- stmievateľnými elektronickými predradníkmi, trieda EEL=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

Na požiadanie môžu byť svietidlá vybavené dvomi elektronickými predradníkmi pre samostatné ovládanie priamej a nepriamej zložky svetelného toku (verzia DA PAR REFLEX).

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

#### PRÍSLUŠENSTVO

- lankový vypínač
- rôzne typy závesného príslušenstva

## MODUL DA

**MODUL DA aluminium light fittings, with the optional choice of two or three fluorescent lamps, combine modern design and a combination of direct and indirect illumination. MODUL DA provides the possibility of enhancement with an additional reflector for separate control of these two components and higher fixture efficiency. To keep the light beam even, increase coverage and simplify maintenance of the light fixture, the top part of it is covered with a transparent plastic diffuser. The light fixtures are mounted as a pendant using various types of accessories.**

### CONSTRUCTION

**Housing:** extruded aluminium, electrostatic powder coat finish – basic shade RAL 9003 (signal white), basic shade RAL 9006 (white aluminium, fine structure).

**Louvers:** aluminium parabolic louvers PAR-V, PAR MAT-V

**Reflector:** additional top reflector (REF version) available on request

**Diffuser:** transparent, notched PMMA

The louver in the light fixture is attached using springs; the top diffuser is attached to the light fixture body groove – this solution allows easy access to the light fixture and tool-free lamp replacement.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### WIRING

**Light fixtures can be equipped with:**

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

Light fixtures can be equipped with two electronic control gears for independent control of the direct and indirect part of the luminous flux on request (DA PAR REFLEX version).

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> diameter
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- holders to prevent pulling off of conductors from the terminal block, a rubber reducer for the power cable
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- pull switch
- various types of suspension accessories

## MODUL DA

**Die Aluminiumleuchten MODUL DA, mit der Möglichkeit von zwei oder drei Leuchtstoffröhren, verbinden ein modernes Design mit der Kombination direkter und indirekter Beleuchtung. MODUL DA bietet die Möglichkeit der Ergänzung um einen Zusatzreflektor für getrennte Steuerung dieser zwei Komponenten und auch eine höhere Lichtleistung an. Für gleichmäßige Lichtstreuung, Erhöhung der Deckung und einfachere Wartung der Leuchte ist der Oberteil der Leuchte mit einem durchsichtigen Kunststoffdiffusor verdeckt. Die Leuchten werden als Hängeleuchten mittels verschiedener Typen vom Hängezubehör eingebaut.**

### KONSTRUKTION

**Leuchtenkörper:** extrudiertes Aluminium, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß), RAL 9006 (Weißaluminium, feine Struktur).

**Raster:** parabolische Aluminiumraster PAR-V, PAR MAT-V

**Reflektor:** ein zusätzlicher Oberreflektor (Ausführung REF) auf Wunsch

**Diffusor:** durchsichtiger, zackiger PMMA

Der Raster ist in der Leuchte mit Federn befestigt, der Oberdiffusor ist in der Rille des Leuchtenkörpers befestigt – diese Lösung ermöglicht einen einfachen Zugang in die Leuchte und einen Austausch der Lichtquellen ohne Werkzeug.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

Die Leuchten können auf Wunsch mit zwei elektronischen Vorschaltgeräten für selbständige Steuerung direkter und indirekter Komponente des Lichtstromes (Ausführung DA PAR REFLEX) ausgerüstet werden.

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel
- die Leuchten können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

## EN

### MODUL EN

Elegantné svietidlá s nízkym hliníkovým profilom ponúkajú na výber niekoľko typov optických systémov. Ich výhodou je kombinácia priameho a nepriameho smerovania svetelného toku. Uplatnenie nájdu nielen pri riešení celkového osvetlenia, ale aj v aplikáciach vyžadujúcich dynamické osvetlenie alebo miešenie farieb. Veľkou výhodou pre všetky ponúkané varianty je možnosť ich priebežného zapojenia do dlhej neprerušovanej línie (verzia EN LINE). Pre zvýšenie krytia a jednoduchú údržbu svietidla je vrchná časť svietidla uzavretá priehľadným plastovým krytom. Svietidlá sa montujú ako závesné pomocou rôznych typov závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** extrudované hliníkové profily, povrchovo upravené anodizovaním (prírodný hliníkový vzhľad)

**Koncovky svietidiel:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9007 (šedý hliník - mikroštruktúra)

**Mriežky:** hliníkové parabolické mriežky PAR-V, PAR MAT-V

**Difúzory:** polykarbonát s dvomi typmi mikroprizmatickej úpravy – LDP a CDP

Kvôli rovnomernejšiemu rozptylu svetla a zabráneniu pohľadu na jednotlivé žiarivky sa voliteľne nad difúzor môže pridať tenká polykarbonátová fólia (verzia DIF).

**Vrchný kryt:** priehľadný plast (PMMA)

Mriežky sú v svietidle uchytené pomocou pružín, vrchný kryt optiky je uchytený v drážke telesa svietidla – toto riešenie umožňuje jednoduchý prístup do svietidla a bez-nástrojovú výmenu svetelných zdrojov.

Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### EN LINE

Pre verziu EN LINE sú použité iné koncovky svietidiel a jednotlivé svietidlá sú navzájom pevne pospájané prostredníctvom plechových spojok, povrchovo upravených v RAL 9007 (šedý hliník - mikroštruktúra). V koncovkách svietidiel sú otvory opatrené gumenými prechodkami. Vnútri svietidiel je pripravená kabeláž 3x1,5mm<sup>2</sup> alebo 5x1,5mm<sup>2</sup>, spolu s bezskrutkovými svorkovnicami umožňujúcimi rýchle priebežné prepojenie svietidiel. Svietidlá sú zavesené za spojky.

#### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

Pre simuláciu priebehu denného osvetlenia, alebo pre potreby farebného miešania, môže byť varianta svietidiel PRISMA vybavená dvomi alebo tromi elektronickými predradníkmi, pre samostatné riadenie každej žiarivky (viac informácií v technickej prílohe).

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

#### PRÍSLUŠENSTVO

- rôzne typy závesného príslušenstva

## MODUL EN

These elegant light fixtures with low aluminium profiles provide several types of optical systems. Their advantage is the combination of direct and indirect light beam regulation. They can be used not only as general lighting, but also in applications requiring dynamic lighting or mixed colours. One great advantage of all offered variants is the possibility to connect them into a long uninterrupted line (EN LINE version). To increase coverage and simplify maintenance of the light fixture, a transparent plastic cover encloses the top section. The light fixtures are mounted as a pendant using various types of accessories.

### CONSTRUCTION

**Housing:** extruded aluminium profiles, anodised surface finish (natural aluminium appearance)

**Light fixture ends:** sheet steel, electrostatic powder coat finish – basic shade RAL 9007 (grey aluminium - microstructure)

**Louvers:** aluminium parabolic louvers PAR-V, PAR MAT-V

**Diffuser:** polycarbonate with two types of microprismatic finish – LDP and CDP

To make light diffusion more even and prevent individual lamps from being visible, the diffuser can be equipped with a thin polycarbonate foil over it (DIF version).

**Top cover:** transparent plastic (PMMA)

Louvers in the light fixture are attached using springs, the top optic cover is attached to the light fixture body groove – this solution allows easy access to the light fixture and tool-free lamp replacement.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### EN LINE

The EN LINE version includes different fixture ends and individual light fixtures are tightly interconnected using metal connectors, surface finished in RAL 9007 (grey aluminium - microstructure). The endings contain openings equipped with rubber reducers. Inside the light fixture, cables 3x1,5mm<sup>2</sup> or 5x1,5mm<sup>2</sup> are located, together with screw-free connection boxes allowing fast interconnection of light fixtures. The light fixtures are suspended on connectors.

### WIRING

Light fixtures can be equipped with:

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

To simulate daily light conditions or to mix colours, the PRISMA variant can be equipped with two or three electronic ballasts for independent control of each fluorescent lamp (for more information see technical appendix).

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screw-free three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- a rubber reducer for power cable
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- various types of suspension accessories

## MODUL EN

Elegante Leuchten mit einem niedrigen Aluminiumprofil bieten einige Typen optischer Systeme zur Auswahl. Ihr Vorteil ist die Kombination direkter und indirekter Richtung des Lichtstromes. Sie kommen nicht nur bei der Lösung der ganzen Beleuchtung, sondern auch in Anwendungen, die dynamische Lösung oder Farbgemisch erfordern, zur Geltung. Ein großer Vorteil für alle angebotenen Varianten ist die Möglichkeit ihrer durchlaufenden Einschaltung in lange kontinuierliche Linie (Ausführung EN LINE). Um Deckung und einfache Wartung der Leuchte zu erhöhen, ist der Oberteil der Leuchte mit einem durchsichtigen Kunststoffdeckel geschlossen. Die Leuchten werden als Hängeleuchten mit verschiedenen Typen des Hängezubehörs eingebaut.

### KONSTRUKTION

**Leuchtenkörper:** extrudierte Aluminiumprofile, Oberflächenbehandlung mit Anodisierung (natürliches Aluminiumaussehen)

**Leuchtenendstücke:** Stahlblech, Oberflächenbehandlung mit elektrostatisc beschichteter Pulverfarbe - Grundton RAL 9007 (Graualuminium – Mikrostruktur)

**Raster:** parabolische Aluminiumraster PAR-V, PAR MAT-V

**Diffusoren:** Polycarbonat mit zwei Arten von prismatischer Gestaltung – LDP und CDP

Wegen der gleichmäßigeren Lichtstreuung und der Vorbeugung des Blicks auf einzelne Leuchtstoffröhren kann eine dünne Polycarbonatfolie (Ausführung DIF) über den Diffusor wahlfrei zugegeben werden.

**Oberdeckel:** durchsichtiger Kunststoff (PMMA)

Die Raster sind in der Leuchte mit Federn befestigt, der Oberdeckel der Optik ist in der Rille des Leuchtenkörpers befestigt – diese Lösung ermöglicht einfachen Zugang in die Leuchte und Austausch der Lichtquellen ohne Werkzeug.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### EN LINE

Für die Ausführung von EN LINE werden andere Endstücke der Leuchten angewendet und die einzelnen Leuchten werden mit Blechverbindungsstücke einander verbunden, mit RAL 9007 (Graualuminium – Mikrostruktur)-Oberflächenbehandlung. In den Leuchteendstücken sind die Öffnungen mit Gummidurchführungen versehen. Innerhalb der Leuchten ist die Verkabelung 3x1,5 mm<sup>2</sup> oder 5x1,5 mm<sup>2</sup> zusammen mit schraubenfreien Klemmleisten vorbereitet, die schnelle durchgehende Durchschaltung der Leuchten ermöglichen. Die Leuchten werden mit Verbindungsstücke aufgehängt.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

Für die Simulation der Tagesbeleuchtung oder bei Bedarf der Farbmischung kann die Variante der Leuchten PRISMA mit zwei oder drei elektronischen Vorschaltgeräten für selbständige Steuerung jeder Leuchtstofflampe ausgerüstet werden (mehrere Informationen in technischer Anlage).

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Gummidurchführung für Speisekabel
- die Leuchten können auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden ausgerüstet werden

## LAMBDA

### MODUL LAMBDA

Svietidlá minimalistického dizajnu s nízkym profilom, ponúkajúce v závislosti od varianty buď priame, alebo kombináciu priameho a nepriameho smerovania svetelného toku. Pre dosiahnutie vysokého svetelného výkonu z kompaktných rozmerov svietidla poskytujú možnosť umiestnenia dvoch žiariviek v jednej parabolickej mriežke. Veľkou výhodou pre všetky ponúkané varianty je možnosť ich priebežného zapojenia do dlhej neprerušovanej línie (verzia LAMBDA LINE). Svetidlá sa montujú buď ako závesné pomocou rôznych typov závesného príslušenstva alebo ako prisadené.

#### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9007 (šedý hliník - mikroštruktúra), RAL 9003 (signálna biela) na požiadanie. Vrchný plech s otvormi nad žiarivkami pre DIR/INDIR verzie.

**Mriežky:** hliníkové parabolické mriežky PAR-V, PAR MAT-V

**Reflektor (Lambda DIR):** hliníkový reflektor zakrývajúce vrchné otvory

Mriežka je v svietidle uchytená pomocou pružín, ktoré umožňujú beznástrojovú výmenu svetelného zdroja. Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### LAMBDA LINE

Vo verzii LAMBDA LINE sú jednotlivé svietidlá navzájom pevne pospájané prostredníctvom plechových spojok, povrchovo upravených v RAL 9007 (šedý hliník - mikroštruktúra). V bočniciach svietidiel sú otvory opatrené gumenými prechodkami. Vnútri svietidiel je pripravená kabeláž 3x1,5mm<sup>2</sup> alebo 5x1,5mm<sup>2</sup>, spolu s bezskrutkovými svorkovnicami umožňujúcimi rýchle priebežné prepojenie svietidiel. Svetidlá sú zavesené za spojky.

#### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

#### PRÍSLUŠENSTVO

- lankový vypínač
- rôzne typy závesného príslušenstva

## MODUL LAMBDA

**Minimalist designed light fixtures with a low profile, offering – depending on the variant – either a direct or a combination of direct and indirect distribution of luminous flux; to achieve high fixture efficiency with the compact dimensions of the light fixture, they provide the option to put two fluorescent lamps into one parabolic louver. One great advantage of all offered variants is the possibility to connect them into a long uninterrupted line (LAMBDA LINE version). The light fixtures are mounted either as a pendant using various types of accessories or as a surface mounted.**

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9007 (grey aluminium - microstructure), RAL 9003 (signal white) on request. Top sheet with perforations above the lamps for DIR/INDIR versions

**Louvers:** aluminium parabolic louvers PAR-V, PAR MAT-V

**Reflector (Lambda DIR):** aluminium reflector covering the top openings

The grid is attached using springs that allow easy lamp changes.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### LAMBDA LINE

In the LAMBDA LINE version, individual light fixtures are tightly interconnected using metal connectors, surface finished in RAL 9007 (grey aluminium - microstructure). Sideboards contain openings equipped with rubber reducers. Inside the light fixtures are cables 3x1,5mm<sup>2</sup> or 5x1,5mm<sup>2</sup>, together with screw-free connection terminals allowing fast interconnection of light fixtures. The light fixtures are suspended on connectors.

### WIRING

**Light fixtures can be equipped with:**

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole connector allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- holders to prevent conductors from detaching from the terminals, rubber reducer for power cable
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- pull switch
- various types of suspension accessories

## MODUL LAMBDA

**Leuchten des minimalistischen Designs mit niedrigem Profil, die in der Abhängigkeit von der Variante eine direkte oder eine Kombination von direkter und indirekter Richtung des Lichtstromes anbieten. Um hohe Lichtleistung von kompakten Abmessungen der Leuchte zu erreichen, bieten sie Möglichkeit, zwei Leuchtstoffröhren in einem parabolischen Raster anzubringen. Ein großer Vorteil für alle angebotenen Varianten ist die Möglichkeit ihrer durchgehenden Einschaltung in eine lange nicht unterbrochene Linie (Ausführung LAMBDA LINE). Die Leuchten werden als Hängeleuchten mittels verschiedener Typen des Hängezubehörs oder als Anbauleuchten eingebaut.**

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9007 (Graualuminium - Mikrostruktur), RAL 9003 (Signalweiß) auf Wunsch. Das Oberblech mit Öffnungen über den Leuchtstoffröhren für Ausführungen DIR/INDIR.

**Raster:** parabolische Aluminiumraster PAR-V, PAR MAT-V

**Reflektor (Lambda DIR):** Aluminiumreflektor, der die Oberöffnungen deckt

Der Raster ist an der Leuchte mit Federn befestigt, die Austausch der Lichtquelle ohne Werkzeug ermöglichen.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### LAMBDA LINE

In der Ausführung LAMBDA LINE sind die einzelnen Leuchten mit Blechverbindungsstücke einander verbunden, mit Oberflächenbehandlung RAL 9007 (Graualuminium – Mikrostruktur). In den Seitenteilen der Leuchten sind die Öffnungen mit Gummidurchführungen versehen. In den Leuchten ist die Verkabelung 3x1,5 mm<sup>2</sup> oder 5x1,5 mm<sup>2</sup> zusammen mit schraubenfreien Klemmleisten vorbereitet, die eine schnelle durchgehende Durchschaltung der Leuchten ermöglichen. Leuchten sind mit Verbindungsstücke aufgehängt.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel
- Leuchte können auf Wunsch mit Noteinheiten mit Autonombetrieb von 1 oder 3 Stunden ausgerüstet werden

### ZUBEHÖR

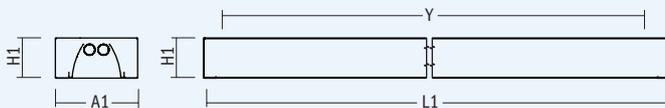

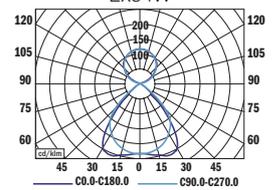

- Seilschalter
- Verschiedene Typen des Hängezubehörs

## QUARK

### MODUL QUARK

Svietidlo moderného dizajnu založené na poslednom trende v osvetľovacej technike - mikroprizmatickom materiále difúzora. Modul Quark sa vyznačuje čistými líniami a extrémne nízkym profilom svietidla 40mm. Difúzor poskytuje mäkké neoslňivé osvetlenie, bez odrazov na obrazovkách, čo rozširuje použitie svietidla aj pre kancelárie s počítačovými obrazovkami (DSE). Quark nájde uplatnenie nielen pri riešení celkového osvetlenia, ale aj v aplikáciach vyžadujúcich dynamické osvetlenie (simuláciu priebehu denného osvetlenia prostredníctvom miešania rozdielnych teplôt bielych žiariviek). Svetidlá sa montujú ako závesné pomocou závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** kombinácia extrudovaných hliníkových profilov a oceleového plechu, časti sú povrchovo upravené elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9007 (šedý hliník – jemná štruktúra).

**Difúzor:** polykarbonátová mikroprizma, verzia CDP a CDP DIF

Kvôli rovnomernejšiemu rozptylu svetla a zabráneniu pohľadu na jednotlivé žiarivky sa voľiteľne nad difúzor môže pridať tenká polykarbonátová fólia (verzia DIF).

**Reflektor:** vrchná hliníková odrazová plocha štandardne pre všetky verzie

Difúzor je k vrchnej časti svietidla uchytený prostredníctvom štyroch pružín a pre jednoduchšiu údržbu zaistený dvomi lankami. Pre prístup do svietidla sa difúzor bežnástrojovo odklopí.

Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- elektronickými predradníkmi, štandardne triedy EEI=A2
  - stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)
- Pre simuláciu priebehu denného osvetlenia, alebo pre potreby farebného miešania, môžu byť svietidlá vybavené dvomi elektronickými predradníkmi pre samostatné riadenie každej žiarivky (viac informácií v technickej prílohe).

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel

## MODUL QUARK

A modern design luminaire based on the latest trend in lighting technology – microprismatic diffuser material. Quark is characterised by plain lines and extremely low profile of the luminaire 40 mm. The diffuser provides soft pleasant light with no reflections on screens, which enhances the possible use of the luminaire also for offices with computer screens (DSE). Quark can be used not only as general lighting, but also in applications requiring dynamic lighting (simulation of the daylight course using the mixing of various white lamp temperatures). The luminaires are mounted as pendant using suspension accessories.

### CONSTRUCTION

**Housing:** combination of extruded aluminium profiles and steel sheet, finished with electrostatic powder coating – basic shade RAL 9007 (grey aluminium – fine structure).

**Diffuser:** polycarbonate microprism, version CDP and CDP DIF

To make light diffusion more even and prevent individual lamps from being visible, the diffuser can be equipped with a thin polycarbonate foil over it (DIF version).

**Reflector:** top aluminium reflecting surface standard for all versions

The diffuser is attached to the top part of the luminaire using four springs and secured by two wires for simple maintenance. To access the luminaire, uncover the diffuser with no tools necessary.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### WIRING

Lighting fixtures can be equipped with:

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

To simulate daily light conditions or to mix colours, the luminaires can be equipped with two electronic control gears for independent control of each fluorescent lamp (for more information see technical appendix).

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- holders to prevent pulling off of conductors from the connecting box, rubber reducer for power cable

## MODUL QUARK

Die Leuchte eines modernen Designs, die auf dem letzten Trend in der Beleuchtungstechnik gegründet ist – auf einem mikroprismatischen Material des Diffusors. Modul Quark zeichnet sich durch reine Linien und ein extrem niedriges Profil der Leuchte von 40 mm aus. Der Diffusor bietet eine weiche blendfreie Beleuchtung, ohne Reflexionen an Bildschirmen, was die Anwendung der Leuchte auch für Büros mit PC-Bildschirmen (DSE) erweitert. Quark kommt nicht nur bei der Lösung von gesamter Beleuchtung zur Geltung, sondern auch in Applikationen, die eine dynamische Beleuchtung erfordern (die Simulation der Tagesbeleuchtung mittels der Mischung von verschiedenen Temperaturen der weißen Leuchtstoffröhren). Die Leuchten werden als Hängeleuchten mittels des Hängezubehörs eingebaut.

### KONSTRUKTION

**Leuchtenkörper:** Kombination der extrudierten Aluminiumprofile und des Stahlblechs, die Teile haben die Oberflächenbehandlung mit einer elektrostatistisch beschichteten Pulverfarbe - Grundton RAL 9007 (graues Aluminium – feine Struktur)

**Diffusor:** Polycarbonat-Mikroprisma, Ausführung CDP und CDP DIF

Wegen der gleichmäßigeren Lichtstreuung und der Vorbeugung des Blicks auf einzelne Leuchtstoffröhren kann eine dünne Polycarbonatfolie (Ausführung DIF) über den Diffusor wahlfrei zugegeben werden.

**Reflektor:** eine obere Reflexionsaluminiumfläche standardmäßig für alle Ausführungen

Der Diffusor ist zum oberen Teil der Leuchte durch vier Federn befestigt und für eine einfachere Wartung mit zwei Seilen gesichert. Zum Zugang in die Leuchte wird der Diffusor ohne Werkzeug aufgeklappt.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können ausgerüstet sein:

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

Für die Simulation der Tagesbeleuchtung oder im Bedarfsfall der Farbmischung können die Leuchten mit zwei elektronischen Vorschaltern für eine separate Steuerung jeder Leuchtstoffröhre ausgerüstet sein (mehr Informationen in technischer Anlage).

**Andere Komponenten:**

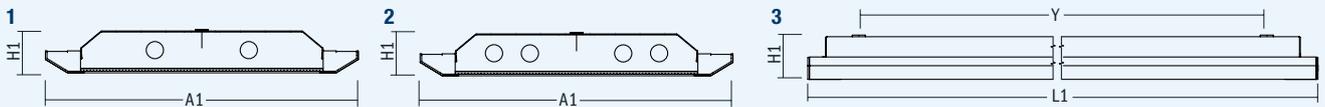

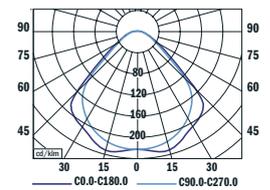

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - es ist notwendig die Lichtquellen extra zu bestellen
- die Innenleiter mit einem festen Kupferkern mit einem Durchschnitt von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- die Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel

## RENDO

### MODUL RENDO

Svietidlo moderného dizajnu založené na poslednom trende v osvetľovacej technike - mikroprizmickom materiále difúzora. Vďaka priesvitnému vrchnému difúзору ponúka kombinovanú distribúciu svetelného toku priamo dole s nepriamym osvetlením stropu. Modul Rendo sa vyznačuje moderným dizajnom a nízkym profilom svietidla 46mm. Difúzor poskytuje mäkké neoslňivé osvetlenie, bez odrazov na obrazovkách, čo rozširuje použitie svietidla aj pre kancelárie s počítačovými obrazovkami (DSE). Rendo nájde uplatnenie nielen pri riešení celkového osvetlenia, ale aj v aplikáciach vyžadujúcich dynamické osvetlenie (simuláciu priebehu denného osvetlenia prostredníctvom miešania rozdielnych teplôt bielych žiariviek). Svetidlá sa montujú ako závesné pomocou závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** kombinácia extrudovaných hliníkových profilov a oceľového plechu, časti sú povrchovo upravené elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9007 (šedý hliník – jemná štruktúra)

**Vrchný difúzor:** číry polykarbonát v prizmatickom prevedení

**Spodný difúzor:** polykarbonátová mikroprizma, verzia LDP, CDP a CDP DIF

Kvôli rovnomernejšiemu rozptylu svetla a zabráneniu pohľadu na jednotlivé žiarivky sa voliteľne nad difúzor môže pridať tenká polykarbonátová fólia (verzia DIF).

**Koncovky svietidla:** polykarbonát, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9007 (šedý hliník – jemná štruktúra)

Pre prístup do svietidla a výmenu žiariviek sa vrchný difúzor beznástrojovo vyberie z drážky telesa svietidla.

Bližší popis jednotlivých typov optiky je uvedený na strane 316/317, v kapitole OPTICS.

#### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

Pre simuláciu priebehu denného osvetlenia, alebo pre potreby farebného miešania, môžu byť svietidlá vybavené dvomi elektronickými predradníkmi pre samostatné riadenie každej žiarivky (viac informácií v technickej prílohe).

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová (samostatne 3+2) svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- držiaky proti vytrhnutiu vodičov zo svorkovnice, gumená prechodka pre napájací kábel

## MODUL RENDO

A modern design luminaire based on the latest trend in luminaire technology – microprismatic diffuser material. Thanks to a translucent top diffuser, it offers combined luminous flux distribution in a downward direction with indirect illumination of ceiling. Rendo is characterised by modern design and low profile of the luminaire 46mm. The diffuser provides soft pleasant light with no reflections on screens, which enhances the possible use of the luminaire also for offices with computer screens (DSE). Rendo can be used not only as general lighting, but also in applications requiring dynamic lighting (simulation of the daylight course using the mixing of various white lamp temperatures). The luminaires are mounted as pendant using suspension accessories.

### CONSTRUCTION

**Housing:** combination of extruded aluminium profiles and steel sheet, finished with electrostatic powder coating – basic shade RAL 9007 (grey aluminium – fine structure)

**Top diffuser:** pure polycarbonate in prismatic shape

**Bottom diffuser:** polycarbonate microprism, version LDP, CDP and CDP DIF

To make light diffusion more even and prevent individual lamps from being visible, the diffuser can be equipped with a thin polycarbonate foil over it (DIF version).

**Luminaire endings:** polycarbonate, finished with electrostatic powder coating – basic shade RAL 9007 (grey aluminium – fine structure)

To access the luminaire and replace fluorescent lamps, pull out the top diffuser from the luminaire body groove with no tools necessary.

Further description of individual optic types is listed on the page 316/317, in section OPTICS.

### WIRING

**Lighting fixtures can be equipped with:**

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

To simulate daily light conditions or to mix colours, the luminaires can be equipped with two electronic control gears for independent control of each fluorescent lamp (for more information see technical appendix).

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- screwless three or five pole terminal (independent 3+2) allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- holders to prevent pulling off of conductors from the connecting box, rubber reducer for power cable

## MODUL RENDO

Die Leuchte eines modernen Designs, die auf dem letzten Trend in der Beleuchtungstechnik gegründet ist – auf einem mikroprismatischen Material des Diffusors. Dank einem durchsichtigen Diffusor bietet sie die Lichtverteilung gerade nach unten mit einer indirekten Beleuchtung der Decke an. Modul Rendo zeichnet sich durch modernes Design und niedriges Profil der Leuchte von 46 mm aus. Der Diffusor bietet eine weiche blendfreie Beleuchtung, ohne Reflexionen an Bildschirmen, was die Anwendung der Leuchte auch für Büros mit PC-Bildschirmen (DSE) erweitert. Rendo kommt nicht nur bei der Lösung von gesamter Beleuchtung zur Geltung, sondern auch in Applikationen, die eine dynamische Beleuchtung erfordern (die Simulation der Tagesbeleuchtung mittels der Mischung von verschiedenen Temperaturen der weißen Leuchtstoffröhren). Die Leuchten werden als Hängeleuchten mittels des Hängezubehörs eingebaut.

### KONSTRUKTION

**Leuchtenkörper:** Kombination der extrudierten Aluminiumprofile und des Stahlblechs, die Teile haben die Oberflächenbehandlung mit einer elektrostatistisch beschichteten Pulverfarbe - Grundton RAL 9007 (graues Aluminium – feine Struktur)

**Oberdiffusor:** reines Polycarbonat in prismatischer Ausführung

**Unterdiffusor:** Polycarbonat-Mikroprisma, Ausführung LDP, CDP und CDP DIF

Wegen der gleichmäßigeren Lichtstreuung und der Vorbeugung des Blicks auf einzelne Leuchtstoffröhren kann eine dünne Polycarbonatfolie (Ausführung DIF) über den Diffusor wahlfrei zugegeben werden.

**Endstücke der Leuchte:** Polycarbonat mit Oberflächenbehandlung mit einer elektrostatistisch beschichteten Pulverfarbe - Grundton RAL 9007 (graues Aluminium – feine Struktur)

Zum Zugang in die Leuchte und zum Austausch der Leuchtstoffröhren wird der Diffusor aus der Rille des Leuchtenkörpers ohne Werkzeug herausgenommen.

Nähere Beschreibung von einzelnen Optiktypen ist am Seite 316/317 in OPTICS Anlage angeführt.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können ausgerüstet sein:**

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

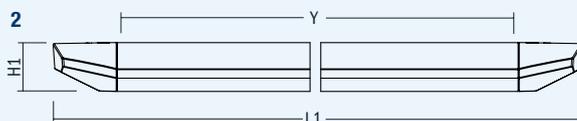

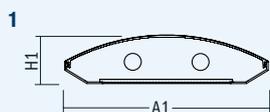

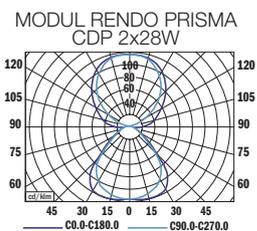

Für die Simulation der Tagesbeleuchtung oder im Bedarfsfall der Farbmischung können die Leuchten mit zwei elektronischen Vorschaltern für eine separate Steuerung jeder Leuchtstoffröhre ausgerüstet sein (mehr Informationen in technischer Anlage).

**Andere Komponenten:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - es ist notwendig die Lichtquellen extra zu bestellen
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige (selbständig 3+2) Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- die Halter gegen Ausreißen der Leiter aus der Klemmleiste, eine Gummidurchführung für Speisekabel

## KA

### MODUL KA

Dvojžiarivkové svietidlá ponúkajúce tri typy optických systémov. Hlavnou výhodou pre všetky ponúkané varianty je možnosť ich priebežného zapojenia do dlhej neprerušovanej línie alebo spájanie viacerých svietidiel v ľubovoľných uhloch pomocou kruhových kĺbových mechanizmov. Svietidlá sa montujú ako prisadené alebo závesné pomocou závesného príslušenstva.

#### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela), RAL 7001 (strieborná šedá) na požiadanie.

**Mriežky:** pokovovaná (LA) alebo biela (LB) polykarbonátová mriežka

**Difúzor:** priesvitný polykarbonát

**Reflektor:** vrchný hliníkový reflektor štandardne pre všetky verzie

**Koncovky:** biely ABS

Optické príslušenstvo sa zo svietidla jednoducho vyberie vytiahnutím zospodu - výmena žiariviek je rýchla a beznástrojová.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- gumená prechodka pre napájací kábel
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 hodina

#### PRÍSLUŠENSTVO

- biela kruhová univerzálna spojka (ABS) umožňuje rýchle vloženie dvoch alebo viacerých držiakov svietidiel ktoré sú nastaviteľné v 3600
- spojky svietidiel pre spájanie do línie

## MODUL KA

**Two-lamp luminaires offering three types of optical systems. Main advantage of all offered variants is the possibility to connect them into a long uninterrupted line or interconnection of various luminaires in random angles using round joint mechanisms. The luminaires are mounted as surface or pendant using suspension accessories.**

### CONSTRUCTION

**Housing:** sheet steel, finished with electrostatic powder coating – basic shade RAL 9003 (signal white), RAL 7001 (silver grey) on request.

**Louvers:** metal coated (LA) or white (LB) polycarbonate grid

**Diffuser:** transparent polycarbonate

**Reflector:** top aluminium reflector standard for all versions

**Endings:** white ABS

Optical accessories are pulled out of the luminaire simply from underneath – lamp replacement is fast and toolless.

### WIRING

**Lighting fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, lighting fixtures are standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- screwless three or five pole connector allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- rubber reducer for power cable
- emergency version of lighting fixtures with autonomous operation 1 hour is available on request

### ACCESSORIES

- white round universal connector (ABS) allows fast installation of two or more luminaire holders which are 360° adjustable
- luminaire connectors for connecting in a line

## MODUL KA

**Die Leuchten mit zwei Leuchtstoffröhren bieten drei Typen der optischen Systeme an. Der Hauptvorteil für alle angebotenen Varianten ist die Möglichkeit ihrer durchlaufenden Einschaltung in eine nicht unterbrochene Linie oder die Verbindung der mehreren Leuchten in beliebigen Winkeln mittels der kreisförmigen Gelenkmechanismen. Die Leuchten werden als Anbauleuchten oder Hängeleuchten mittels des Hängezubehörs eingebaut.**

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (Signalweiß), RAL 7001 (Silbergrau) auf Wunsch

**Raster:** ein metallisierter (LA) oder weißer (LB) Polykarbonatraster

**Diffusor:** ein durchsichtiges Polykarbonat

**Reflektor:** ein Oberaluminiumreflektor standardmäßig für alle Ausführungen

**Endstücke:** weißes ABS

Das optische Zubehör wird aus der Leuchte einfach durch Ausziehen von unten herausgenommen – der Austausch der Leuchtstoffröhren ist schnell und ohne Werkzeug.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch, die Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

**Andere Komponenten:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm) - es ist notwendig die Lichtquellen extra zu bestellen
- die Innenleiter mit einem festen Kupferkern mit einem Durchschnitt von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchschnitt von max. 2,5 mm<sup>2</sup> anzuschließen
- eine Gummidurchführung für Speisekabel
- es ist möglich die Leuchte auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 Stunde auszurüsten

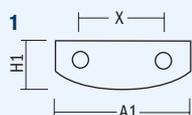

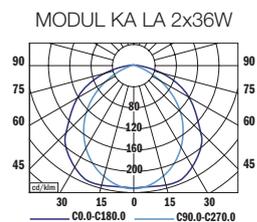

### ZUBEHÖR

- ein weißes kreisförmiges universales Verbindungsstück (ABS) ermöglicht ein schnelles Einlegen von zwei oder mehreren Haltern, die in 360° einstellbar sind
- die Verbindungsstücke der Leuchten zur Einschaltung in die Linie

## AAZ/AA

### MODUL AAZ/AA

Svietidlo MODUL AA sa vyrába v dvoch variantách – ako závesné (Modul AAZ) alebo ako nástenné (Modul AA). Vďaka svojej konštrukcii je v ponuke len s priamo/nepriamou vyžarovacou charakteristikou.

#### KONŠTRUKCIA

**Teleso svietidla:** perforovaný oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela). Koncovky svietidla z plného plechu, povrchovo upravené tou istou farbou. Pre rovnomerný rozptyl svetla je pod perforovanými plechom vsunutá tenká polykarbonátová fólia.

**Difúzor:** vyrobený z PMMA v prizmatickom prevedení

Svietidlo umožňuje beznástrojovú výmenu svetelných zdrojov - po odstránení difúzora položeného na vrchu svietidla.

#### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm), kompaktné žiarivky TC-L (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>

#### PRÍSLUŠENSTVO

rôzne typy závesného príslušenstva

## MODUL AAZ/AA

The MODUL AA lighting fitting is manufactured in two variants – pendant (Modul AAZ) or wall-mounted (Modul AA). Thanks to its construction, it is offered only with direct/indirect light characteristics.

### CONSTRUCTION

**Housing:** perforated sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white). Ends are made of solid sheet metal, surface finished in the same colour. For regular light diffusion, a thin polycarbonate foil is used under the perforated sheet.

**Diffuser:** made of PMMA in a prismatic finish

The light fixture allows for tool-free lamp replacement– after the diffuser on top of the light fixture is removed.

### WIRING

Light fixtures can be equipped with:

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, light fixtures are standardly compensated
- electronic control gear, standard class EEI=A2
- dimmable electronic control gear, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm), compact fluorescent lamps TC-L (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section

### ACCESSORIES

- various types of suspension accessories

## MODUL AAZ/AA

Die Leuchte MODUL AA wird in zwei Varianten hergestellt – als Hängeleuchte (Modul AAZ) oder als Wandleuchte (Modul AA). Dank ihrer Konstruktion ist sie im Angebot nur mit direkter/indirekter Strahlungscharakteristik.

### KONSTRUKTION

**Leuchtenkörper:** Lochstahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß). Die Endstücke der Leuchte sind aus Vollblech. Oberflächenbehandlung mit derselben Farbe. Für eine gleichmäßige Lichtstreuung ist unter dem Lochblech eine dünne Polykarbonatfolie eingelegt.

**Diffusor:** in prismatischer Ausführung, hergestellt aus PMMA

Die Leuchte ermöglicht einen Austausch der Lichtquellen ohne Werkzeug – gemäß der Beseitigung des auf der Leuchte angebrachten Diffusors

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm), kompakte Leuchtstofflampen TC-L (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen

## OPTICS

### OPIS

Štýlové žiarivkové svietidlá smerujúce svetelný tok buď smerom dole, nepriamo odrazom od stropu miestnosti alebo kombináciou týchto dvoch spôsobov (priamo/odrazom). Pre požadovaný nepriamy rozptyl svetla od stropu potrebujú dostatočnú vzdialenosť medzi svietidlom a stropom miestnosti. Najväčšou výhodou svietidiel Modul je práve možnosť kombinácie priameho a nepriameho osvetlenia. Táto kombinácia dokáže potlačiť ostro ohraničené prechody medzi svetlom a tieňom, vznikajúce na stenách miestností pri používaní mriežkových svietidiel, ktoré prísne rozdeľujú svetelný tok smerom dole v predpísaných uhloch. Pre vyhovujúce osvetlenie, spĺňajúce nároky ľudí pre zrakovú pohodu, zrakový výkon a v neposlednom rade taktiež bezpečnosť, je vhodné dodržiavať odporúčania pre osvetľovanie stien a stropov miestností. Odporúčania hovoria, že priemerná osvetlenosť stien nad pracovnou rovinou by mala byť najmenej 50% priemernej osvetlenosti horizontálnej pracovnej roviny a priemerná osvetlenosť stropu by mala byť aspoň 30% priemernej horizontálnej osvetlenosti pracovnej plochy. Vhodným rozmiestnením svietidiel Modul môžu byť tieto odporúčania ľahko splnené.

### Oddelené riadenie žiariviek

Výhodou Modulov je možnosť navolenia si jedného z troch svietiacich režimov: priamy, nepriamy a kombinovaný. Táto možnosť je možná len v prípade oddeleného ovládania žiariviek v svietidle. Použitím takéhoto ovládania dokážeme v jednej miestnosti vytvoriť rozličné atmosféry – v závislosti od toho, či jedna, dve alebo všetky tri žiarivky budú zapnuté. Týmto spôsobom sa dá ľahko regulovať množstvo priameho alebo nepriameho osvetlenia. Regulácia môže ešte viac vyniknúť použitím stmievateľných predradnikov.

### MRIEŽKY PAR-V, PAR MAT-V

Parabolická mriežka s priečnymi lamelami taktiež parabolického tvaru, vyrobená z lešteného alebo matného anodizovaného hliníka s ohľadom na vysokú účinnosť a presné smerovanie svetelného toku. Vďaka dvojito-zakrivenému parabolickému tvaru je ideálna pre využitie v miestnostiach s počítačmi, kde je kladený dôraz na vysoký zrakový výkon. Svetelný tok napomáha smerovať vysoká kvalita použitého hliníka s viac ako 95% odrazivosťou (MIRO). Tento typ mriežok zabezpečuje najvyššiu zrakovú pohodu za obrazovkami počítačov vďaka presnému obmedzeniu rušivého osvetlenia od monitorov a samotných svetelných zdrojov. Nízky jas mriežky spĺňa hranice európskej normy EN 12464-1 pre osvetlenie pracovísk obsahujúcich zobrazovacie jednotky - DSE (limity 200 resp. 1000 cd/m<sup>2</sup> v 65 stupňových uhloch). Hliník: Alanod 316G2, MIRO 4 (extra bright), MIRO 5 (difúz), MIRO 7 (matt), MIRO85 (erotex) Účinnosť svietiel môže byť zvýšená pridaním vrchnej odrazovej plochy nad žiarivky (verzia REFLEX).

### DESCRIPTION

This stylish suspended fluorescent luminaires can distribute light directly down, indirectly by reflecting off the ceiling, or a combination (direct/indirect). Moduls, of course, require additional ceiling height for clearance and for adequate light spread on the ceiling. The biggest advantage of Modul luminaires is the possibility of combining direct and indirect lighting. It can completely eliminate the dark and gloomy effect that can be created by „categorised“ louvres, including the sharp wall cut off and bright scalloping. For the suitable lit environment that satisfies the human need for visual comfort, visual performance and safety is good to follow new recommendations for wall and ceiling illuminance. They say that the average wall illuminance above the working plane should be at least 50% of the average horizontal illuminance on the working plane and the ceiling average illuminance should be at least 30% of the average horizontal illuminance on the working plane. With using of Modul luminaires these recommendations can be easily fulfilled.

### Separate control of fluorescent lamps

Another big advantage of suspended luminaires is that they can work in three modes: direct, indirect and combined. This is possible by choosing of separate controlling of fluorescent lamps. This feature allows to create three different atmospheres by one lighting installation – it depends if one, two or three fluorescent tubes are turned on. Different amount of direct and indirect light is therefore easy adjustable. This feature can be even more intensive together with dimmable control gears.

### PAR-V, PAR MAT-V LOUVERS

Double parabolic louvre with parabolic crossblades made of polished or matt anodised aluminium with respect to high efficiency and precise direction of the light beam. Thanks to the double-curved parabola is ideal for use in rooms with computers, where good visual comfort is required. The light output is optimised by high quality of aluminium which has reflectance exceeding 95% (MIRO). This type of louvre provides the highest visual comfort at the computer screen due to exact glare evaluation of reflections from monitors and light sources themselves. Low glare of the louvre is in accordance with European standard EN 12464-1 for lighting of workplaces equipped with display screens - DSE (limits 200 or 1000 cd/m<sup>2</sup> at 65° elevation). Aluminium: Alanod 316G2, MIRO 4 (extra bright), MIRO 5 (diffus), MIRO 7 (matt), MIRO85 (erotex) Luminous efficiency can be increased by adding a top reflex surface above the lamps (REFLEX version).

### BESCHREIBUNG

Stilvolle Leuchtstofflampen-Leuchten, die den Lichtstrom entweder nach unten, indirekt mit der Reflexion von der Decke des Raums, oder mit der Kombination von diesen zwei Arten (direkt/mit Reflexion) richten. Für die geforderte indirekte Lichtstreuung benötigen sie einen ausreichenden Abstand zwischen der Leuchte und der Decke des Raums. Der größte Vorteil der Leuchten Modul ist diese Möglichkeit der Kombination der direkten und indirekten Beleuchtung. Diese Kombination kann die scharf begrenzten Übergänge zwischen dem Licht und dem Schatten unterdrücken, die auf den Wänden der Räume beim Einsatz der Rasterleuchten entstehen, die den Lichtstrom nach unten in vorgeschriebenen Winkeln teilen. Für entsprechende Beleuchtung, die Ansprüche der Leute auf den Sehkomfort, die Sehleistung und nicht zuletzt auf die Sicherheit erfüllt, ist es geeignet, die Empfehlungen für Beleuchtung von Wänden und Decken der Räume einzuhalten. Die Empfehlungen sagen, daß eine durchschnittliche Beleuchtungsstärke der Wände über der Arbeitsebene sollte mindestens 50 % der durchschnittlichen Beleuchtungsstärke der horizontalen Arbeitsebene sein und eine durchschnittliche Beleuchtungsstärke der Decke sollte mindestens 30 % der durchschnittlichen horizontalen Beleuchtungsstärke der Arbeitsfläche sein. Durch entsprechende Anbringung der Leuchten Modul können diese Empfehlungen leicht erfüllt werden.

### Getrennte Steuerung der Leuchtstofflampen

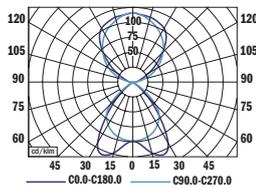

Der Vorteil der Leuchten Modul ist die Möglichkeit der Vorgabe eines aus drei Leuchtmodi: direktes, indirektes und kombiniertes. Diese Möglichkeit ist nur im Fall der getrennten Steuerung der Leuchtstofflampen in der Leuchte möglich. Durch den Einsatz von dieser Steuerung können wir in einem Raum verschiedene Atmosphären bilden – abhängig davon, ob eine, zwei oder drei Leuchtstofflampen eingeschaltet sein werden. Auf diese Art kann die Menge der direkten oder indirekten Beleuchtung leicht reguliert werden. Die Regulierung kann sich durch den Einsatz der dinstennden Vorschalter abheben.

### RASTER PAR-V, PAR MAT-V

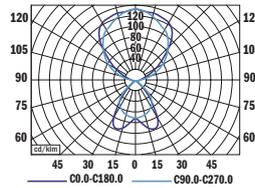

Ein parabolischer Raster mit Querlamellen der parabolischen Form, der aus poliertem oder mattem anodisiertem Aluminium mit Rücksicht auf die hohe Wirksamkeit und genaue Richtung des Lichtstromes hergestellt ist. Dank der doppel-gekrümmten parabolischen Form ist er zum Einsatz in Räumen mit PC ideal, wo eine hohe Sehleistung hervorgehoben ist. Die hohe Qualität des verwendeten Aluminiums mit der Reflexionsfähigkeit von mehr als 95 % (MIRO) hilft den Lichtstrom zu richten. Dieser Typ der Raster sichert den höchsten Sehkomfort hinter den PC-Bildschirmen dank der genauen Beschränkung der störenden Blendung von Monitoren und einzelnen Lichtquellen. Eine niedrige Leuchtdichte des Rasters erfüllt die Grenzen der europäischen Norm EN 12464-1 für Beleuchtung der Arbeitsplätze, die die DSE-Bildschirmanzeigeräte enthalten (Grenzen 200 bzw. 1000 cd/m<sup>2</sup> in 65° Winkeln). Aluminium: Alanod 316G2, MIRO 4 (extra bright), MIRO 5 (diffus), MIRO 7 (matt), MIRO85 (erotex) Die Wirksamkeit der Leuchten kann mit der Zugabe der oberen Reflexionsfläche über die Leuchtstoffröhren (Ausführung REFLEX) erhöht werden.

### MIKROPRIZMATICKÉ DIFÚZORY

Súčasný trend v svetelnej technike – špeciálne difúzory s mikroprizmatickou štruktúrou. Primárne sú určené ako náhrada parabolických mriežok, pričom ponúkajú veľmi podobné vlastnosti, no môžu sa používať aj v špeciálnych aplikáciách pre farebné miešanie svetla. Pre rad MODUL sú v ponuke dve základné verzie týchto difúzorov, určené pre obmedzenie rušivého oslnenia pre kancelárske priestory:

### MICROPRISMATIC DIFFUSERS

The newest trend in lighting technology – special diffusers with microprismatic structure. They are primarily designed to substitute parabolic louvers, while offering very similar properties; however, they can be used also in special applications for mixing of colour lighting. The MODUL range offers two basic versions of these diffusers, designed to reduce glare in office applications:

### MICROPRISMATIC DIFFUSERS

Der gegenwärtige Trend in der Lichttechnik – spezielle Diffusoren mit einer mikroprismatischen Struktur. Sie sind primär als Ersatz der parabolischen Raster bestimmt, wobei sehr ähnliche Eigenschaften anbieten, und sie können auch in speziellen Applikationen für farbige Mischung des Lichts angewendet werden. Für die MODUL-Reihe sind zwei Grundauführungen dieser Diffusoren im Angebot, die für die Beschränkung der störenden Blendung in Büroräumen bestimmt sind:

Linear de-glaring system, LDP

Táto prizma s čiarovou mikroštruktúrou ponúka vynikajúce optické vlastnosti a zároveň rieši problém oslnenia. Obmedzenie oslnenia v priechom smere na svetidlo je dosahované špeciálnym symetrickým tvarom prizmy. Obmedzenie oslnenia v pozdĺžnom smere na svetidlo je zaistené efektom celkového odrazu pozdĺž tvarovanej štruktúry prizmy. Lineárna prizmatická štruktúra LDP je priehľadná a vytvára dvojitý obraz žiariviek, čím znižuje konečný jas svetidla. Navyše, za uhlom pohľadu väčším ako 60° nie sú jednotlivé žiarivky viditeľné, čím sa dosiahne úplné potlačenie oslnenia od svetidla.

This linear prismatic microstructure astonishes by its outstanding optical brilliance and potential in solving de-glaring problems. De-glaring in the direction perpendicular to the prisms is reached by the special symmetric shape of the prism. De-glaring in the direction along the prism is performed by total-reflection effects along the shaped prism structure.

The linear prismatic structure LDP is highly transparent and generates a double image of the fluorescent lamp, what results in a reduced luminance. Furthermore the lamps are invisible beyond a viewing angle of 60°. This is equal to a complete de-glaring of the lighting.

Dieses Prisma mit einer Linien-Mikrostruktur bietet ausgezeichnete optische Eigenschaften an und löst auch das Problem der Blendung. Die Beschränkung der Blendung in der Querrichtung auf die Leuchte ist mit einer speziellen symmetrischen Form des Prismas erreicht. Die Beschränkung der Blendung in der Längsrichtung auf die Leuchte ist mit dem Effekt der Gesamreflexion entlang der formgestalteten Struktur des Prismas gesichert.

Lineare prizmatická štruktúra LDP ist durchsichtig und bildet ein Doppelbild der Leuchtstofflampen, womit sie die Endleuchtdichte der Leuchte senkt. Darüber hinaus sind die einzelnen Leuchtstoffröhren hinter dem mehr als 60° größeren Ansichtswinkel nicht sichtbar, womit die völlige Unterdrückung der Blendung von der Leuchte erreicht wird.

Conical de-glaring prism, CDP

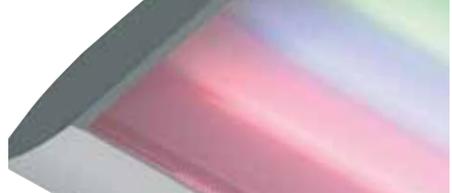

Rotačne-symetrické obmedzenie oslnenia je dosahované presne navrhnutým tvarom kužeľov. Prizma CDP ponúka kompletne konštantné obmedzenie oslnenia vo všetkých smeroch pohľadu. Pri zapnutom svetidle značne znižuje jas svietiacej plochy, difúzor zabezpečuje opalový efekt plochy.

Rotation symmetric de-glaring is achieved by computer determined shape of the cone. A completely constant de-glaring in all angles of the plane is offered by the micro-comb CDP prisms. Their effect in lightings is rather opal and reduces luminance considerably, as well in not de-glared areas.

Eine rotationsymmetrische Beschränkung der Blendung ist mit einer genau entworfenen Form der Kegel erreicht. Das Prisma CDP bietet eine vollständig konstante Beschränkung der Blendung in allen Richtungen der Ansicht an. Bei der eingeschalteten Leuchte senkt es wesentlich die Leuchtdichte der leuchtenden Fläche, der Diffusor sichert einen Opaleffekt der Fläche.

RGB

Použitie mikroprizmatických difúzorov vo svetidlách je obzvlášť všestranný nástroj; zabezpečujú miešanie farieb použitím farebných T5 žiariviek, alebo simuláciu priebehu denného osvetlenia použitím bielych žiariviek s rozdielnou teplotou chromatickosti ako denná, biela a teplo biela. Každé svetidlo obsahuje tri elektronické predradníky - jeden pre každú žiarivku. Najlepší spôsob ako ich ovládať je použitím DALI signálu. Špeciálny difúzor používajúci mikroprizmatickú technológiu zabezpečí pri výstupe zo svetidla optimálne zmiešavanie farieb.

The prismatic versions of these luminaires are particularly versatile lighting tools: they offer colourmixing using coloured RGB T5 fluorescent lamps or daylight simulation using white T5 fluorescent lamps with different temperatures like daylight, cool white and warm white. Three electronic control gears, one for each lamp, are contained within the luminaire. The best way how to control them is via DALI signal. A special diffuser using microprism technology ensures the optimum mixture of the three primary colours as the light is emitted from the luminaire.

Der Einsatz der mikroprismatischen Diffusoren in den Leuchten ist ein besonders allseitiges Instrument: sie sichern die Mischung der Farben durch den Einsatz von den Leuchtstoffröhren T5 oder mit der Simulation der Tagesbeleuchtung durch den Einsatz der weißen Leuchtstofflampen mit verschiedener Temperatur der Chrominanz als Tagesleuchtstoffröhre, weiße und warme weiße Leuchtstoffröhre. Jede Leuchte enthält drei elektronische Vorschalter – ein für jede Leuchtstoffröhre. Die beste Art ihrer Steuerung ist die Verwendung des DALI-Signals. Ein spezieller Diffusor, der die mikroprismatische Technologie verwendet, sichert bei dem Ausgang aus der Leuchte eine optimale Mischung der Farben.

## PRESTIGE

Rýchlomontážny systém Prestige ponúkajúci široké príslušenstvo reflektorov a mriežok umožňuje veľmi ľahko a vysoko účinne realizovať rôzne typy vnútorných svetelných inštalácií.

Vďaka možnosti rôzneho nakonfigurovania môže systém Prestige pokryť široké množstvo aplikácií – fotometrické vlastnosti ho predurčujú k použitiu pre celkové osvetlenie interiérov (predajné plochy, priemyselné priestory, obchodné priestory, školy, knižnice) a taktiež pre priestory kde je dôležité stlačiť spotrebu elektrickej energie osvetľovacej sústavy na minimum. Tento koľajnicový systém určený na priebežnú montáž je ideálne do všetkých priestorov ktoré vyžadujú vysokú hladinu rovnomerného osvetlenia. V ponuke sú tiež špeciálne mriežky a reflektory pre výrobné alebo skladové priestory, nízke alebo vysoké sklady či výstavné plochy.

Hlavnou výhodou tohto prípojnicového systému je rýchla a ľahká montáž a vysoká variabilita použitia. Systém Prestige je navrhnutý pre lineárne žiarivky T5 a T8, jedno-žiarivkové alebo dvoj-žiarivkové verzie. Elektrická časť svietidla pozostáva buď z kompenzovaného magnetického predradníka, štandardného elektronického predradníka, stmievateľného elektronického predradníka alebo inteligentného elektronického predradníka podporujúceho DALI protokol. Na želanie sa svietidlo môže vybaviť núdzovou jednotkou.

Vhodným výberom vnútornej kabeláže inštalovanej v nosnom profile sa dá dosiahnuť optimálne riešenie pre každú aplikáciu. Skutočnosť, že kabeláž je súčasťou nosného profilu, umožňuje ďalšie šetrenie nákladov za elektrické rozvody. Priebežný systém je možné dodať až so siedmimi vodičmi, určenými pre sieťové napájanie, stmievanie a prevádzku v núdzovom režime, všetky štandardne s 1,5 mm<sup>2</sup> prierezom. Nosný profil môže byť pripravený s tromi, piatimi alebo siedmimi vodičmi priebežného vedenia.

Jednoduchý uzamykací mechanizmus umožňuje rýchlo a bezpečne upevniť teleso svietidla k nosnému profilu. Pre lepšie usmernenie svetelného toku sa k nosnému profilu môžu uchytiť reflektory, ktoré sa k nosnému profilu uchytávajú prostredníctvom toho istého mechanizmu. Všetky tieto činnosti sa vykonávajú beznástrojovo.

Široký výber svetelných zdrojov a výkonov (lineárne žiarivky T5 alebo T8) umožňuje dosiahnuť maximálny svetelný výkon, koľajnicový systém s pripravenou kabelážou je v ponuke v rôznych štandardných dĺžkach: od 1,5m do 4,5m, určený pre priamu montáž na povrch alebo pre závesnú montáž pomocou laniek alebo reťazí.

Z projektantom navrhnutého usporiadania svetidiel sa dá správnou kombináciou reflektorov a mriežok ľahko dosiahnuť žiadaný výsledok – široký výber reflektorového príslušenstva pokrýva celú radu štandardných aplikácií. Ako príslušenstvo sú k dispozícii reflektory s priamym alebo s priamo/nepriamym smerovaním svetelného toku, mriežky zabraňujúce oslneniu od svetelných zdrojov a reflektory so širokou alebo úzkou charakteristikou vyžarovania svetelného toku. Doplnky – spojky reflektorov a biele plastové koncovky zabezpečujú čistý vzhľad sústavy a perfektné zoradenie priebežného systému do jednej línie.

Osvetľovací systém Prestige umožňuje ľahké prispôsobenie sa novým požiadavkám na osvetlenie – systém je multifunkčný, flexibilný a spoľahlivý. S jeho beznástrojovou montážou a jednoduchým elektrickým pripojením systém Prestige významne redukuje čas potrebný k inštalácii.

## PRESTIGE

Easy – to – mount system PRESTIGE equipped with wide range of louvres and reflectors enables realization of different interior lighting solutions with high efficiency.

Thanks to the various configuration options of the Prestige system, a wide range of applications can be covered - the luminaires distinct characteristics make them ideal for general lighting (for commercial spaces, retail and industrial areas, schools and libraries) and also in areas that need to keep energy consumption at a minimum. This continuous light run system is ideally suited to areas which require high levels of uniform light. Specific reflectors/louvres are also available for manufacturing areas and storage rooms, low or high bay warehouses or exhibition halls.

The main advantage of this system is fast and easy montage and high variability of applications. System PRESTIGE is produced for T5 and T8 single and twin lamp luminaires.

Electric part of the system consists either of compensated conventional kontrol gear, standard electronic kontrol gear, dimmeable kontrol gear or intelligent kontrol gear supporting DALI protocol. Emergency version is available on request.

Optimal solution for specific application is enabled by variations of wiring installed in the suspension profile. As the internal wiring is the part of the mounting rail, it markedly decreases costs for distribution of electricity. The range is available with up to 7 conductors for mains power supply, dimming and emergency operation, with 1.5 mm<sup>2</sup> cross-section. Mounting rail can be supplied with three, five or seven conductors.

Easy lock mechanism fixes the device mount to the mounting rail quickly and securely and also enables the fixing of reflectors for light direction. No tools are needed to install accessories.

A great choice of lamp types (T5 or T8) and wattages gives maximum lighting performance and the pre-wired trunking is available in more modular lengths, from 1.5m to 4,5m, for surface mounting or suspended by ropes or chains.

The right combination of reflector and louvre enables reaching requested outcome of the lighting arrangement designed by the projectant - the wide selection of light-directing accessories easily covers the entire range of standard applications. Reflectors with and without indirect light part, louvers for glare limitation, reflectors with wide or narrow angle characteristic are available as light-directing components. Reflector couplers and white plastic end caps provide neat appearance and perfect alignment of the continuous row lighting system.

Prestige lighting systems enable easy adaptation to new lighting requirements - the system is multifunctional, flexible and reliable. With its simple and tool-free mounting and electrical connection Prestige can significant reduce required installation time.

## PRESTIGE

Der Schnellmontagesystem Prestige bietet eine breite Auswahl von Leuchten und Gittern, die eine sehr leichte und Hocheffiziente Realisierung von verschiedenen Typen von Lichtinstallationen in Innenräumen ermöglicht.

Dank der Möglichkeit einer schneller Konfigurierung bietet der Prestige System eine breite Auswahl von Anwendungen an – die photometrische Eigenschaften prädestinieren das System für eine Verwendungs zur ganzheitlichen Ausleuchtung von Innenräumen (Verkaufsflächen, Industrieräume, Geschäftsräume, Schulen, Bibliotheken), sowie für Räume mit einer Notwendigkeit von Reduzierung von Stromverbrauch auf das Minimum. Dieses zur Durchlaufmontage bestimmte Schienensystem passt ideal in alle Räume, die eine gleichmäßige Ausleuchtung auf hohem Niveau brauchen. In dem Angebot sind auch spezielle Gitter sowie Leuchten für Produktions- oder Lagerräume, niedrige oder hohe Lager, sowie für Ausstellungsflächen zu finden.

Der Hauptvorteil dieses Sammelschienensystems ist die Schnelle und leichte Montage und die hohe Anwendungsvariabilität. Das Prestige System ist für die Linearleuchten von Typen T5 und T8 vorgeworfen, und zwar für Ein- und Zweileuchtenvarianten. Der elektrische Teil der Leuchte besteht entweder aus einem kompensierten magnetischen Vorschaltgerät, handelsüblichen elektronischem Vorschaltgerät, dämmerbaren Vorschaltgerät oder einen intelligenten, das DALI Protokoll unterstützenden elektronischen Vorschaltgerät. Auf Anfrage kann man die Leuchte mit einer Noteinheit ausstatten.

Mit einer optimaler Auswahl der im Trageprofil zu montierender Innenverkabelung kann man eine optimale Lösung für jede Applikation zu finden. Aufgrund der Tatsache, dass die Innenverkabelung zum Trageprofil gehört, kann man weitere Stromverteilungskosten erzielen. Das Durchlaufsystem ist mit bis zu sieben Leitern zu liefern, die für die Netzversorgung, Dämmerung und einen Notbetrieb bestimmt sind, alle handelsüblich mit einem 1,5 mm<sup>2</sup> Profil geliefert. Das Trageprofil kann mit drei, fünf oder sieben Leitern der Durchlaufleitung ausgestattet werden.

Der einfache Sperrmechanismus ermöglicht eine schnelle und sichere Befestigung des Leuchtkörpers zum Trageprofil. Für eine bessere Regulierung des Lichtstroms kann man auch diejenigen Leuchten an das Trageprofil befestigen, die durch denselben Mechanismus an den Trageprofil befestigt. All diese Tätigkeiten werden ohne Instrumente ausgeführt.

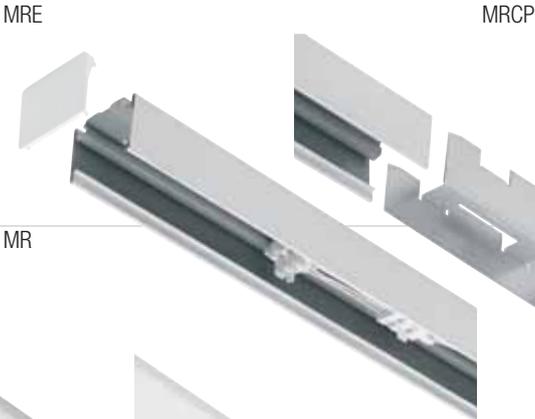

Die breite Auswahl von Lichtquellen und Leistungen (Linearleuchten des Typs T5 oder T8) ermöglicht eine maximale Lichtleistung, das Schienensystem mit einer vorbereiteter Verkabelung ist in verschiedenen Längen von 1,5 m bis 4,5 m, und ist für eine direkte Montage an der Oberfläche oder eine Aufhängung mittels Litzen oder Ketten bestimmt

Aus der vom Projektanten vorgeschlagenen Leuchtengestaltung kann man durch eine richtige Kombination von Leuchten und Gittern leicht zum gewünschten Ergebnis kommen – der breite Auswahl von Leuchtenzubehör schließt eine Reihe von Standardanwendungen ein. Als Zubehör stehen Leuchten mit einer direkten oder indirekten Leitung des Lichtstrahls, Gitter zur Verhinderung von Blendung durch Lichtquellen und Leuchten mit einer breiten oder engen Charakteristik der Ausstrahlung des Lichtstromes. Die Komponente – Leuchten Kupplungen und weiße Plastik-Endstücke sorgen für ein sauberes Aussehen des Systems und eine perfekte Rangierung des Durchlaufsystems in eine Linie.

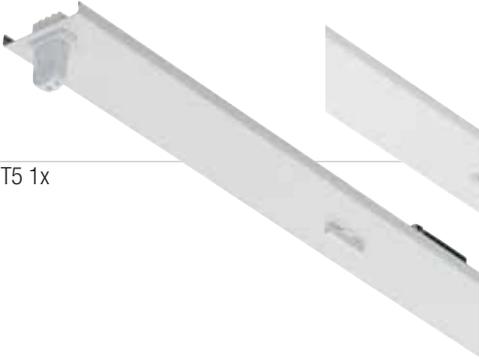

Das Prestige Beleuchtungssystem ermöglicht eine einfache Anpassung an die neue Forderungen an die Ausleuchtung – das System ist multifunktionell, flexibel und zuverlässig. Die werkzeugfreie Montage und der einfache Prestige Stromanschluss sorgt für eine erhebliche Reduzierung der Installationszeit.

## MOUNTING RAIL

### MR – MOUNTING RAIL

The mounting rail is manufactured by calandering of 0,6 mm sheet steel, surface coated with white polyester resin paint. Rail is available in 2 lengths (double-body and triple-body) for lamps T8 or T5. It is available to order single-body mounting rail on request. The wiring of 3x1,5mm<sup>2</sup>, 5x1,5mm<sup>2</sup> or 7x1,5mm<sup>2</sup> cross-section can be installed in the profile. It is possible to order wiring with 2,5 mm<sup>2</sup> cross-section on request. Ends of conductors installed in the mounting rail are ended with the axial connector, which allows conductive continuous connection of the mounting rails without any tools. The connectors, that are part of wiring, allow simple clamping of luminaire bodies to the mounting rails.

### PRE-WIRED TRUNKING

Wiring for the Prestige system is fitted at the factory and prepared for a rapid electrical installation. Trunking systems with built-in conductors provides big flexibility. Prestige system have electrical connection points for mains, lighting control and emergency lighting supply at pre-defined points - in distances for T8 58W or T5 35/49/80W fluorescent lamp. For simple to complex configurations, the mounting rails feature three, five or seven-conductor wiring with 1.5 mm<sup>2</sup> cross-section. Cross-section

2.5 mm<sup>2</sup> is available on request. If emergency lighting is required in the lighting installation, some of lighting fixtures has to be equipped with emergency unit, which needs extra conductor for battery supply.

#### 1. 3-pole electrical connection

Basic variant of Prestige system allows to connect phase, neutral and ground conductors to the terminal block.

#### 2. 5-pole electrical connection

##### a) three-phase operation

Use of 3-phase system allows Prestige to be built in very long uninterrupted runs, making it ideal solution for large buildings. 3-phase system also allows to switch-off of most luminaires at night or during periods of low requirement, while maintaining sufficient illumination.

b) two-phase operation + emergency operation option from two spare phase conductors is still available.

#### 3. 7-pole electrical connection

This variant combines all above mentioned advantages together, moreover brings to the final user possibility of lighting control. 7-pole connection

is therefore necessary in lighting installations, where lighting fixtures should be pre-wired for:

##### a) three-phase operation + lighting control

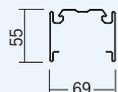

Use of 3-phase system allows Prestige to be built in very long uninterrupted runs, making it ideal solution for large buildings. 3-phase system also allows to switch-off of most luminaires at night or during periods of low requirement, while maintaining sufficient illumination. Two spare conductors are dedicated to lead a signal for dimmable electronic control gears.

##### b) two-phase operation + emergency operation + lighting control

By this type of wiring it is possible to use emergency modules inside, while alternative phase option from two spare phase conductors is still available. Two conductors are dedicated to lead a signal for dimmable electronic control gears.

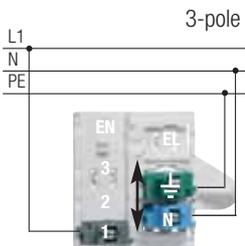

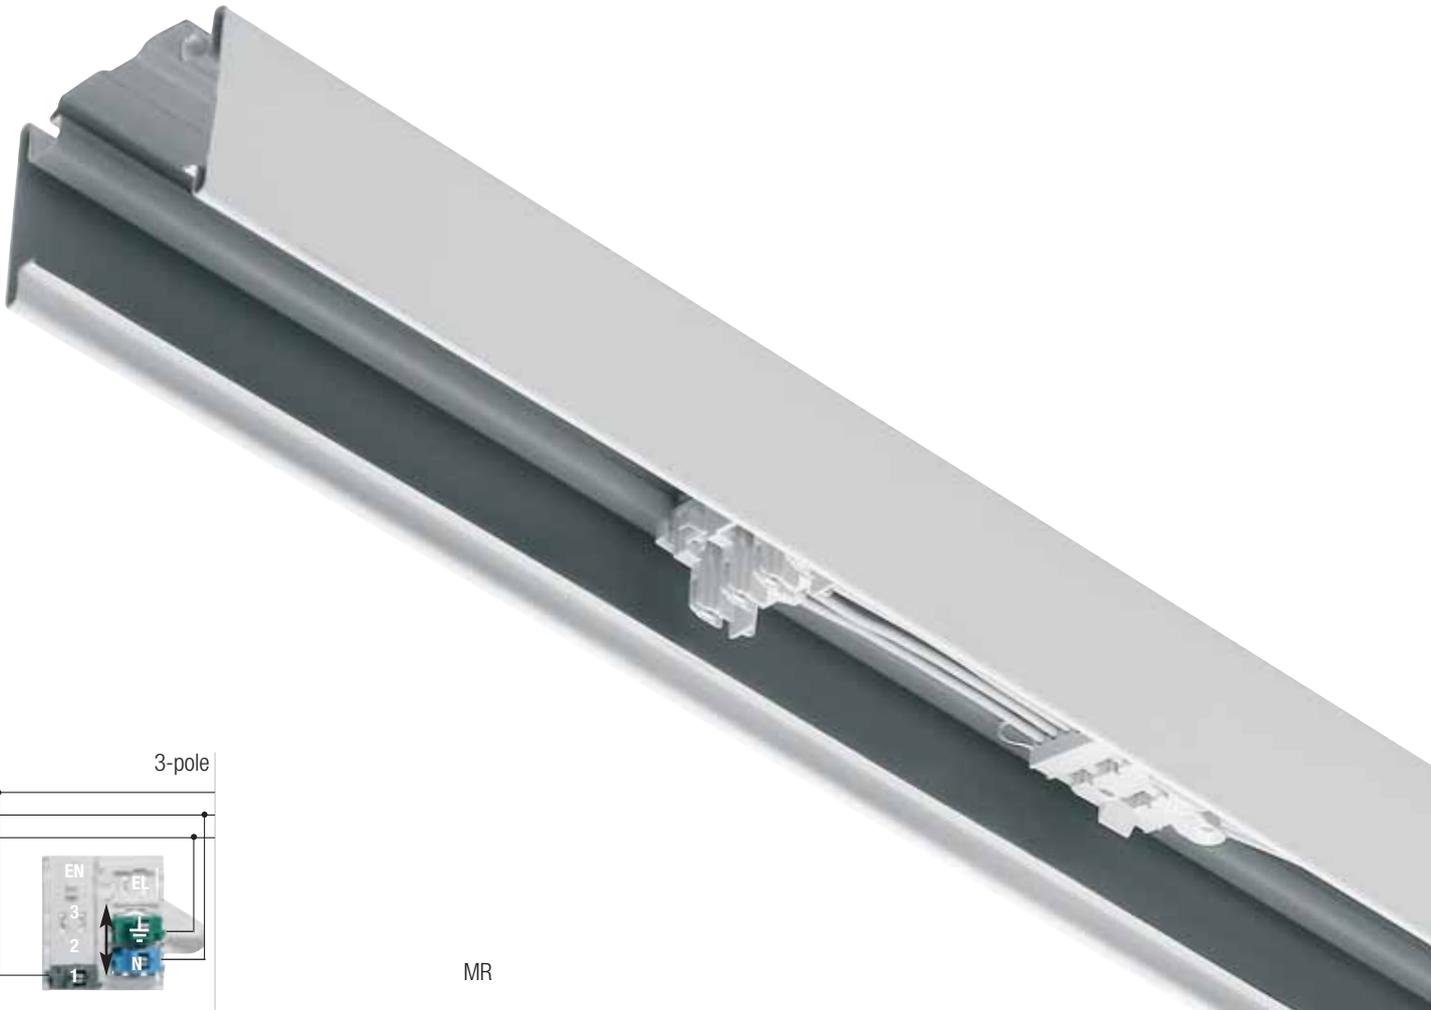

##### c) three-phase operation + emergency operation

The same benefits for three-phase operation as mentioned in point a) + emergency lighting possibility. The last seventh conductor is not connected.

RSE 5x1,5mm <sup>2</sup>	PB50000000000000	0.68			

All types of suspensions are attached to the mounting rails without any tools via stainless steel quick-fix bracket. Wires length are fully adjustable without tools. Maximum distance between suspension brackets is 2.5 metres.

**RSE – rope suspension with electric cable**

The rope suspension for electric connection. Depth adjustable suspension is used for holding of the mounting rail together with connection of the mounting rail to the mains.

3 or 5-core wiring of 1,5 mm<sup>2</sup> cross-section of standard length 800mm is available.

Another length is available on request.

**RS – rope suspension**

Depth adjustable rope suspension of standard length 800mm. Another length is available on request.

Diameter of wire is 1.5 mm.

**CHS – chain suspension**

Chain suspension of standard length 800mm.

**SB – bracket for ceiling mounting**

Quick-fix bracket for ceiling installation of mounting rail.

**CHP – bracket for chain**

Quick-fix bracket for chain suspension of mounting rail.

# PRESTIGE

## DEVICE MOUNT T5 DM T5 1x.../DM T5

Device mount for T5 fluorescent lamps is normally installed by using of a mounting rail. Device mount is manufactured by calandring of sheet steel, surface coated with white polyester resin paint. Device mount is available in single and twin lamp version, where both versions can use mostly the same optic. Device mount is equipped with 2 clamping mechanisms which allow simple gripping of the device mount to the mounting rail. By using of these clamping mechanisms it is also possible to fix reflectors to the device mount without any tools.

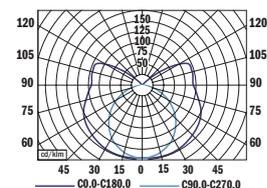

The connector placed on the gear tray is used for simple electrical connection of the lighting fixture to the mounting rail. This connector also allows simple selection of the phase in three-phase system (5 or 7-pole electrical connection). Phase

selection is made by repositioning of movable contact into the required position. Additional free contacts allow configuration of a standard lighting fixture into an emergency luminaire or into a dimmable luminaire.

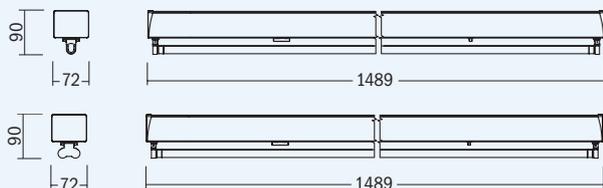

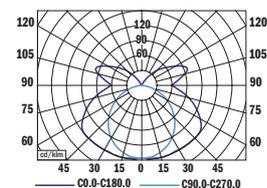

DM T5 can be equipped with an electronic ballast or with a dimmable electronic ballast (analogue or digital). Emergency version is available on request.

It is required to make a separate order for lamps.

## PRESTIGE OPTICAL SYSTEMS AND ACCESSORIES DM T5

### Batten luminaire without reflector

Luminaires that have exposed lamps allow the user to have almost 360° of space lighting. The version without optics can be used for basic lighting with no need of light concentration.

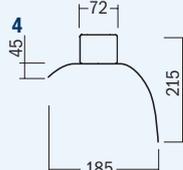

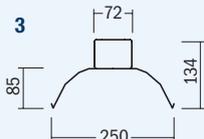

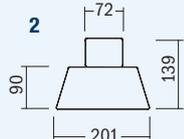

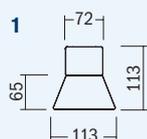

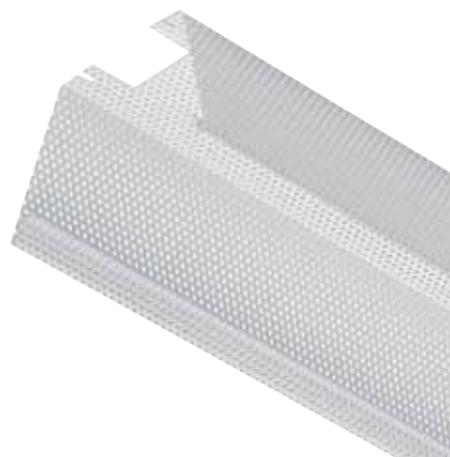

#### R12 T5 L1

Reflector accessory made of 0,6 mm steel sheet; finished with white powder coating RAL. Designed for one or twin fluorescent lamps T5. Light distribution direct, wide angle. Ideal for installations which require high illumination levels and low energy consumption.

#### R12 T5 L2

Reflector accessory made of 0,6 mm perforated steel sheet; finished with white powder coating RAL. Designed for one or twin fluorescent lamps T5. Light distribution direct/indirect, wide angle. Reflector perforation for ceiling illumination ensures decorative look with pleasant lighting effect. Ideal for representative installations which require high illumination levels and low energy consumption.

**R12 T5 AL**

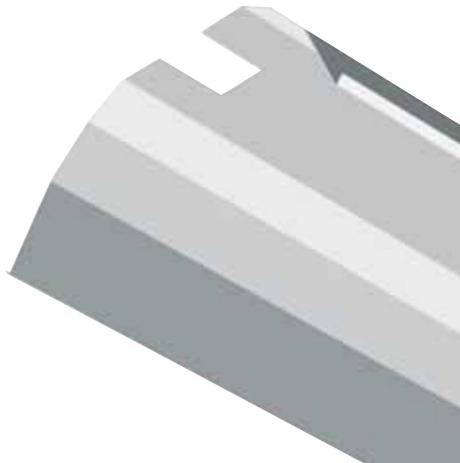

Reflector is made of pure anodized aluminium, high gloss. Light distribution direct, wide angle. Designed for one or twin fluorescent lamps T5. Ideal for middle - high mounting installations which require high illumination levels and low energy consumption.

DM T5 R12 AL 2x

**R12 T5 AL DEEP**

With aluminium narrow beam reflector it is possible to use fluorescent lamps at high levels and simultaneously to maintain the required illuminance - depending on room height, these optics ensures optimum illumination of aisles in high-bay storage facilities or production bays with high roofs. The narrow-beam optic is ideal for room heights from 6 to 10 m. Reflector is made of pure anodized aluminium, high gloss. Light distribution direct, narrow beam. Reflector is designed for T5 fluorescent lamps - both single or twin lamp versions.

DM T5 R12 AL DEEP 1x

**R12 T5 AL ASYMMETRIC**

Asymmetrical light distribution that enables designers to accentuate walls and displays while still applying the same type of luminaire appearance as used for general lighting. Reflector is designed for T5 fluorescent lamps - both single or twin lamp versions. Suitable for mounting halls, production sites, workshops and especially for wall, blackboard and shelf lighting.

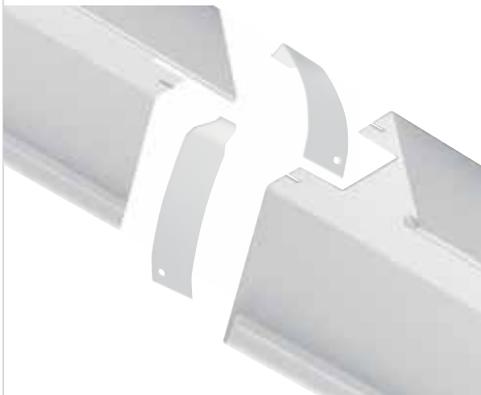

DM T5 R12 AL ASYMMETRIC 2x

**REP R12 – reflector ending piece**

Plastic ending of reflectors R12 T5 L1, R12 T5 L2, R1 T8 L1 and R1 T8 L2. Reflector end piece must be ordered separately.

**RCP R12 – reflector connecting piece**

Clutch of reflectors R12 T5 L1, R12 T5 L2, R1 T8 L1 and R1 T8 L2. Reflector connector must be ordered separately.

## DEVICE MOUNT T8 DM T8 1x.../DM T8 2x...

Device mount for T8 fluorescent lamps is normally installed by using of a mounting rail. Device mount is manufactured by calandering of sheet steel, surface coated with white polyester resin paint. Device mount is available in single and twin lamp version, where both versions can use mostly the same optic. Device mount is equipped with 2 clamping mechanisms which allow simple gripping of the device mount to the mounting rail. By using of these clamping mechanisms it is also possible to fix reflectors to the device mount without any tools.

The connector placed on the gear tray is used for simple electrical connection of the lighting fixture to the mounting rail. This connector also allows simple selection of the phase in three-phase system (5 or 7-pole electrical connection). Phase selection is made by repositioning of movable contact into the required position. Additional free contacts allow on-site configuration of a standard lighting fixture into an emergency luminaire or into a dimmable luminaire.

DM T8 can be equipped with a magnetic ballast (with or without compensation capacitor), with an electronic ballast or with a dimmable electronic

ballast (analogue or digital). Emergency version is available on request. It is required to make a separate order for lamps.

### Starter alternative: glow starters – longlife starters - safety starters

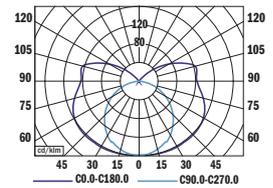

All luminaires equipped with magnetic ballasts are standardly fitted with glow starters. For better safety or economy of installation, it is possible to order safety starters or longlife starters.

Longlife starters - their number of switches is up to 10 times higher than that of other conventional starters – and they increase the fluorescent lamp lifetime by up to 20%.

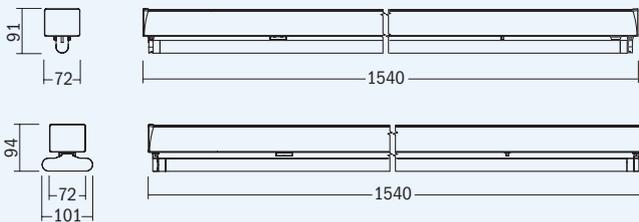

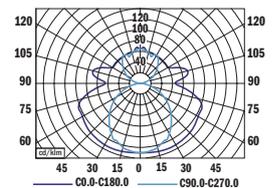

Safety starters - they offer decisive advantages in comparison to conventional starters without switch-off function: automatic and reliable switch-off of defective lamps or lamps, that have reached their end of life, thus avoiding annoying flickering and unscheduled maintenance work. Moreover, they have built in circuit breaker to protect both the starter and the ballast. 10 times higher number of switches ensures long service life compared to conventional starters. This type of starters also

increase the fluorescent lamp lifetime by up to 20%. It is strongly recommended to replace starter every time when lamp is changed.

### Batten luminaire without reflector

Luminaires that have exposed lamps allow the user to have almost 360° of space lighting. The version without optics can be used for basic lighting with no need of light concentration.

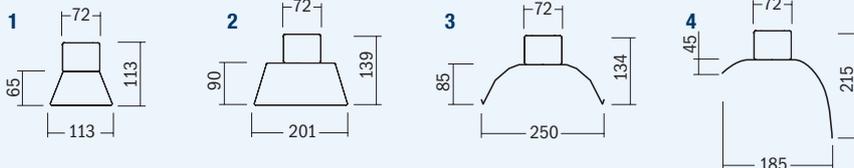

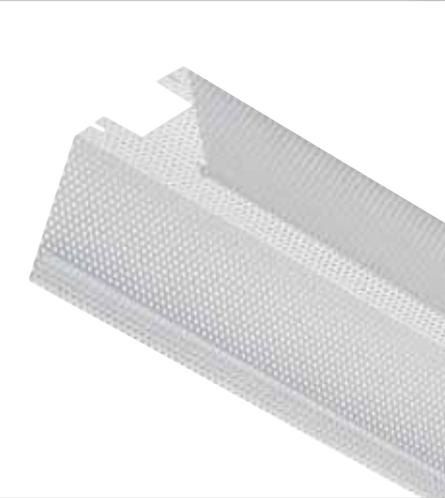

#### R1 T8 L1

Reflector accessory made of 0,6 mm steel sheet; finished with white powder coating RAL. Designed for one fluorescent lamp T8. Light distribution direct, wide angle. Ideal for installations which require high illumination levels and low energy consumption.

#### R1 T8 L2

Reflector accessory made of 0,6 mm perforated steel sheet; finished with white powder coating RAL. Designed for one fluorescent lamp T8. Light distribution direct/indirect, wide angle. Reflector perforation for ceiling illumination ensures decorative look with pleasant lighting effect. Ideal for representative installations which require high illumination levels and low energy consumption.

**R1 T8 AL**

Reflector is made of pure anodized aluminium, high gloss. Light distribution direct, wide angle. Designed for one fluorescent lamp T8. Ideal for middle - high mounting installations which require high illumination levels and low energy consumption.

**R12 T8 AL DEEP**

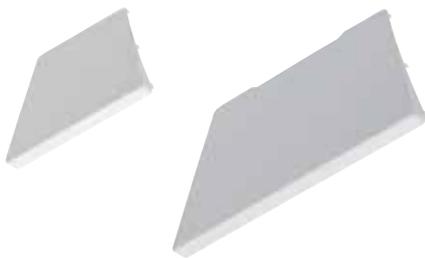

With aluminium narrow beam reflector it is possible to use fluorescent lamps at high levels and simultaneously to maintain the required illuminance - depending on room height, these optics ensures optimum illumination of aisles in high-bay storage facilities or production bays with high roofs. The narrow-beam optic is ideal for room heights from 6 to 10 m. Reflector is made of pure anodized aluminium, high gloss. Light distribution direct, narrow beam. Reflector is designed for T8 fluorescent lamps - both single or twin lamp versions.

**R12 T8 AL ASYMMETRIC**

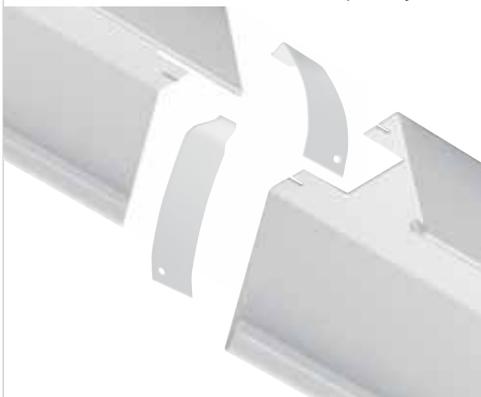

Asymmetrical light distribution that enables designers to accentuate walls and displays while still applying the same type of luminaire appearance as used for general lighting. Reflector is designed for T8 fluorescent lamps - both single or twin lamp versions. Suitable for mounting halls, production sites, workshops and especially for wall, blackboard and shelf lighting.

**REP R12 – reflector ending piece**

Plastic ending of reflectors R12 T5 L1, R12 T5 L2, R1 T8 L1 and R1 T8 L2. Reflector end piece must be ordered separately.

**RCP R12 – reflector connecting piece**

Clutch of reflectors R12 T5 L1, R12 T5 L2, R1 T8 L1 and R1 T8 L2. Reflector connector must be ordered separately.

**RCP R2 - reflector connecting piece**

Clutch of reflectors R2 T8 L1, R2 T8 L2. Reflector connector must be ordered separately.

**REP R2 - reflector ending piece**

Plastic ending of reflectors R2 T8 L1, R2 T8 L2. Reflector end piece must be ordered separately.

## INSTALLATION

**The PRESTIGE system is a perfect compound. It consists of different factory pre-wired mounting profiles, which needs to be simply joined together at the place of installation without the need to use of any tools. Even untrained staff can handle this.**

For suspended ceiling installation (RS rope suspension with adjustable height in this case), the clip is simply snapped to the mounting rail using a slight pressure.

A MRCP joint is used for mechanical connection of different mounting rails.

Different mounting rails are connected electrically via axial connectors located always on both ends of the mounting rails.

Electrical and mechanical connection of the device mount (DM T5 1x in this case) to the mounting rail without the need to use of any tools is done by the special connector which is a part of the wiring. Simple selection of the lamp phase is done by adjusting of this connector.

Lighting fixtures device mount are equipped with two locking mechanisms that make it possible to fit them easily to the mounting rail.

By using of the same locking mechanisms it is possible to fit reflector to the device mount. Reflector (R12 L1 in this case) is pushed to the device mount and fixed by simply turning of the locking mechanism.

After connecting of the reflector (R12) end piece, it is possible to insert the light source.

Use the spring mechanisms, which are parts of the louvre, various types of louvers can be attached to the reflectors.

## ACCENT

Prípojnícový systém Accent pokračuje v osvedčenej koncepcii tradičného systému NOKIA a je s ním kompatibilný. Je to najpoužívanejší typ trojfázového prípojnícového systému v Európe. Lišty osvetľovacieho systému sú navrhnuté pre jednoduchú montáž na stropy a steny alebo pre zapustenú montáž do závesných podhládov. Lišty môžu mať rôznu dĺžku a môžu byť spájané buď priamo, alebo pod rôznymi uhlami prostredníctvom nastaviteľných koncoviek. Pre vytvorenie ľubovoľného útvaru sú k dispozícii konektory typu I, L, T alebo X. Lišty majú v sebe diery na uchytenie v pravidelných rozstupoch. Hlavná výhoda systému Accent je jeho univerzálnosť – možnosť prispôsobenia osvetlenia na základe požiadaviek užívateľa. Zákazník si môže vybrať z rôznych typov svetelných zdrojov, ktoré môže ľubovoľne rozmiestňovať a natáčať do požadovaných smerov. Okrem flexibility systému je samozrejmosťou rýchla a jednoduchá montáž.

### KONŠTRUKCIA

**Lišty:** extrudovaný hliníkový profil, štandardná dĺžka 3 metre, povrchová úprava anodizovaním

**Plastové príslušenstvo:** spojky, klby a koncovky sú vo farbe RAL 7040 (okenná šedá)

**Telesá svietidiel:** hliníkové odliatky

V každej kolajnici sú uložené 4 vodiče - tri slúžia pre fázové vodiče, štvrtý je nulový vodič. Konektory svietidiel sa vložia do kolajnice, otočením plastovej páčky sa upevnia a uzemia zároveň, pomocou otočného mechanizmu sa nastaví požadovaná fáza. Predradníky sú umiestnené v hliníkových kazetách svietidiel.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- stmievateľnými 12V elektronickými transformátormi
- elektronickými predradníkmi pre výbojky

**Ostatné komponenty:**

- svetelné zdroje: nízkonapäťové halogénové žiarovky QR-CB51, metal-halogenidové výbojky HIT (svetelné zdroje je nutné objednať zvlášť)

### PRÍSLUŠENSTVO

- rôzne typy spojok a závesov (pozri technickú schému systému ACCENT)

## ACCENT

The Accent connecting bar system continues in the traditions of the NOKIA system and is compatible with it. It is the most frequently used type of three-stage connecting bar system in Europe. Lighting system bars are designed for simple installation to walls and ceilings, or for embedded pendant installation. Bars can have various lengths and can be connected either directly or in various angles using adjustable ends. Connector types I, L, T and X are available to create random formations. The bars contain regular attachment holes.

The main advantage of the Accent system is its flexibility – adjustment of the light fittings on the basis of user's requirements is possible. The customer can choose from various types of light sources, which can be randomly positioned and deflected to desired directions. In addition to the system's flexibility, fast and simple installation is also an advantage.

### CONSTRUCTION

**Bars:** extruded aluminium profile, standard length of 3 metres, anodised surface finish

**Plastic accessories:** connectors, joints and ends are RAL 7040 (window grey)

**Light fixture bodies:** aluminium casting

Each track contains 4 conductors – three of them serve as phase conductors, the fourth is neutral. Lamp connectors are put into the track, attached by twisting plastic lever, and at the same time they are grounded, then the required phase is set using a rotary mechanism. Ballast boxes are situated in the aluminium housings of the light fixtures.

### WIRING

Light fixtures can be equipped with:

- dimmable 12V electronic transformers
- electronic ballast for discharge lamps

**Other components:**

- lamps: low-voltage halogen lamps QR-CB51, metal-halide discharge lamps HIT (lamps must be ordered separately)

### ACCESSORIES

- various types of connections and suspension equipment (see ACCENT system technical description)

## ACCENT

Das Schienensystem Accent setzt in bewährter Konzeption des traditionellen System NOKIA fort und ist mit ihm kompatibel. Es ist ein am meisten angewendetes dreiphasiges Schienensystem in Europa. Die Leisten sind für einen einfachen Einbau in Decken und an Wände, oder für die Unterputzinstallation in Hängeuntersichten, entworfen. Die Leisten können verschiedene Längen haben und können direkt sein oder unter verschiedenen Winkeln durch einstellbare Endstücke verbunden werden. Gestaltung in beliebige Form stehen Verbindungsstecker I, L, T oder X zur Verfügung. Die Leisten haben Öffnungen zur Befestigung in regelmäßigen Abständen.

Der Hauptvorteil des Accent-Systems ist seine Allseitigkeit – Möglichkeit der Anpassung der Beleuchtung aufgrund von Forderungen des Anwenders. Der Kunde kann aus verschiedenen Typen der Lichtquellen wählen, die er beliebig anbringen und in gewünschte Richtungen drehen kann. Nebst der Flexibilität des Systems ist auch ein schneller und einfacher Einbau selbstverständlich.

### KONSTRUKTION

**Leisten:** extrudiertes Aluminium, Standardlänge von 3 m, anodisierte Oberflächenbehandlung.

**Kunststoffzubehör:** Verbindungen, Gelenke und Endstücke der Farbe RAL 7040 (Fenstergrau)

**Leuchtenkörper:** Aluminiumgüsse

Es sind in jeder Schiene 4 Leiter angebracht – drei dienen als Phasenleiter, der vierte ist ein Nullungsleiter. Die Verbindungsstecker werden in die Schiene angebracht, durch die Drehung des Kunststoffhebels befestigt und geerdet, mit einem Drehmechanismus wird die geforderte Phase eingestellt. Die Vorschalter sind in Aluminiumkassetten der Leuchten angebracht.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können wie folgt ausgerüstet sein:

- mit elektronischen 12 V-Dimmertransformatoren
- mit elektronischen Vorschaltern für Entladungslampen

**Andere Komponente:**

- Lichtquellen: Niederspannung-Halogenlampen QR-CB51, Metall-Halogenid Entladungslampen HIT (die Lichtquellen sind extra zu bestellen)

### ZUBEHÖR

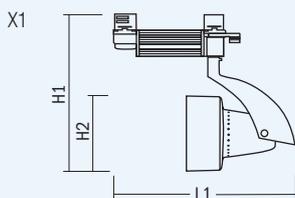

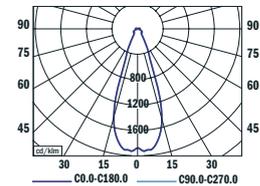

- verschiedene Typen von Verbindungen und Aufhängungen (siehe technisches Schema des Systems ACCENT)

# CCS T5

## CCS T5

Svietidlá radu CCS (colour changing system) si nájdu svoje miesto hlavne v aplikáciach, v ktorých sa uplatní náladové osvetlenie dosiahnuteľné prostredníctvom miešania farieb, dynamické osvetlenie, v priestoroch vyžadujúcich simuláciu priebehu denného osvetlenia, no dajú sa použiť aj pri riešení celkového osvetlenia. Rad CCS je v ponuke s priamym vyžarovaním ako vstavaná, prisadená alebo závesná varianta, alebo s priamo-nepriamym vyžarovaním ako prisadená alebo závesná varianta. Základ svietidla tvorí špeciálny opálový difúzor. Jeho vlastnosti zabezpečujú dokonalé zmiešavanie farieb na povrchu, čoho výsledkom je homogénna farebná plocha - jednotlivé farebné žiarivky nie sú rozoznateľné.

### KONŠTRUKCIA

**Teleso svietidla:** extrudované hliníkové profily, povrchovo upravené elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9007 (šedý hliník – jemná mikroštruktúra).

Pri variante priameho a nepriameho vyžarovania (CCS DIR/INDIR) sú na spodku svietidla vyseknuté otvory prekryté opálovým difúzorom (PC). Vnútorne steny svietidla sú obložené bielym plechom s difúznym rozptylom svetla, povrchovo upravené elektrostaticky nanášanou práškovou farbou - odtieň RAL 9003 (matná biela).

**Difúzor:** opálový plast (liaty PMMA). Pod difúzorom je umiestnený priehľadný plastový kryt (SAN), ktorý chráni difúzor svietidla pred prípadnými nečistotami. Difúzor je v svietidle uchytený prostredníctvom štyroch pružín a zaistený bezpečnostnými lankami proti úplnému vypadnutiu. Pre prístup do svietidla je difúzor potrebné vybrať pomocou špeciálnych nástrojov (nástroje sú súčasťou balenia). Pri verzii svietidla CCS určenej pre vstavanie do podhládu má hliníkový rám svietidla po krajoch rozšírený lem o 30 mm na každej strane (viď obr.).

### ELEKTRICKÁ VÝBAVA

Svietidlá sú štandardne vybavené stmievateľnými elektronickými predradníkmi (trieda EEL=A1) riadenými DALI signálom, ktoré umožňujú využiť všetky výhody svietidiel CCS - samostatné ovládanie každej farby (viac informácií v technickej prílohe).

#### Ostatné komponenty:

- svetelné zdroje: lineárne žiarivky T5 (16 mm) - svetelné zdroje sú dodané spolu so svietidlom
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- na zadnej strane svietidla je pre rýchle elektrické pripojenie do siete umiestnená trojpólová svorkovnica WIELAND 92.030.2053.0 (prierez vodičov max. 2,5 mm<sup>2</sup>), spolu s dvojpólovou svorkovnicou WIELAND 93.420.4553.0 pre rýchle pripojenie riadiaceho signálu (max. 2 x 0,75 mm<sup>2</sup>)

### PRÍSLUŠENSTVO

- držiaky svietidla pre vstavanú variantu
- závesné príslušenstvo
- rôzne typy elektronického príslušenstva umožňujúce programovanie farebných scén a vytváranie sekvencií podľa predstáv užívateľa (viac informácií v technickej prílohe)

## CCS T5

The **CCS (colour changing system) range of light fittings** are used mainly in applications that involve mood lighting achievable by mixing colours or dynamic lighting, in spaces requiring simulation of daylight changes, but they can also be used for general lighting. The CCS range is offered with direct illumination as recessed, surface mounted or suspended, or with direct-indirect illumination as recessed, surface mounted or suspended.

On the base of the light fixture is a special opal diffuser. Its properties ensure perfect blending of colours on surface, resulting in a homogenous colour area – individual coloured lamps are indistinguishable.

### CONSTRUCTION

**Housing:** extruded aluminium profiles, electrostatic powder coat finish – basic shade RAL 9007 (grey aluminium – fine microstructure).

The direct and indirect illumination variant (CCS DIR/INDIR) includes cutout openings at the bottom of the light fixture, covered with an opal diffuser (PC). Inner walls of the light fixture are covered in white sheet metal with diffuse light dispersion, electrostatic powder coat finish – RAL 9003 shade (matte white).

**Diffuser:** opal plastic (cast PMMA). Under the diffuser is a transparent plastic cover (SAN) protecting the diffuser from potential dirt.

The diffuser is attached to the light fixture using four springs and secured against complete fall-out by security wires. To access the light fixture, the diffuser must be taken out using special tools (they are part of delivery). The CCS version designed for recessing into ceilings has its aluminium frame widened by 30 mm on each side (see fig.).

### WIRING

As standard equipment, these light fixtures come equipped with dimmable electronic DALI signal-controlled control gears (class EEI=A1) that enable the use of all the advantages of CCS light fixtures – mainly, independent control of each colour (for more information see the technical appendix).

#### Other components:

- lamps: linear fluorescent lamps T5 (16 mm) – lamps are delivered with the light fixture
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- for fast electrical connection, a three-pole WIELAND 92.030.2053.0 terminal can be found in the back of the light fixture (conductors up to 2.5 mm<sup>2</sup> cross-section), together with a two-pole WIELAND 93.420.4553.0 terminal for fast connection of the control signal (up to 2 x 0,75 mm<sup>2</sup> cross-section)

### ACCESSORIES

- light fixture holders for the built-in version
- suspension accessories
- various types of electronic equipment that allow programming of colour scenes and creation of sequences of the user's choosing (for more information see the technical appendix)

## CCS T5

Die Leuchten der Reihe CCS (colour changing system) werden ihren Platz hauptsächlich in den Applikationen finden, in denen eine mittels des Farbgemisches erreichbare stimmungsvolle Beleuchtung und eine dynamische Beleuchtung in den die Simulation der Tagesbeleuchtung erfordernden Räumen zur Geltung kommen und sie können auch bei der Lösung der gesamten Beleuchtung verwendet werden. Die Reihe CCS ist im Angebot mit einer direkten Strahlung als eine Einbau-, Anbau- oder Hängevariante, oder mit direkter-indirekter Strahlung als eine Anbau- oder Hängevariante.

Die Leuchtengrundlage bildet ein spezieller Opaldiffusor. Seine Eigenschaften gewährleisten eine vollkommene Mischung der Farben an der Oberfläche, deren Ergebnis eine homogene Farbfläche ist – die einzelnen Farblichtstoffröhren sind nicht erkennbar.

### KONSTRUKTION

**Leuchtenkörper:** extrudierte Aluminiumprofile, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9007 (Graualuminium - Mikrostruktur)

Bei der Variante direkter und indirekter Strahlung (CCS DIR/INDIR) sind am Unterteil der Leuchte Öffnungen ausgestanzt, die mit dem Opaldiffusor (PC) verdeckt sind. Die Innenwände der Leuchte sind mit Weißblech mit diffuser Lichtstreuung belegt, sie haben Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - RAL 9003 (mattweiß).

**Diffusor:** Opalkunststoff (gegossener PMMA). Unter dem Diffusor ist ein durchsichtiger Kunststoffdeckel (SAN) angebracht, der den Diffusor der Leuchte gegen eventuelle Unreinheit schützt.

Der Diffusor ist an der Leuchte mit vier Federn befestigt und mit Sicherheitsseilen gegen völligem Ausfall gesichert. Für den Zugang zur Leuchte ist es notwendig, den Diffusor mit speziellen Werkzeugen (Werkzeug bildet den Bestandteil der Lieferung) herauszunehmen. Bei der Leuchtenausführung CCS, die zum Einbau in die Untersicht bestimmt ist, hat ein Aluminiumrahmen am Rand den Saum um 30 mm an jeder Seite verbreitert (siehe Abb.).

### ELEKTRISCHE AUSRÜSTUNG

Leuchten sind standardmäßig mit den mit DALI-Signal gesteuerten elektronischen Dimmvorschaltgeräten (Klasse EE1=A1) ausgerüstet, die es ermöglichen, alle Vorteile der Leuchten CCS auszunutzen – selbständige Steuerung jeder Farbe (mehr Informationen in technischer Anlage)

#### Andere Komponente:

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen werden zusammen mit der Leuchte geliefert
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- auf der Rückseite der Leuchte ist für den schnellen Anschluß zum Netz eine dreipolige Klemmleiste WIELAND 92.030.2053.0 (Leiterdurchschnitt von max. 2,5 mm<sup>2</sup>) zusammen mit einer zweipoligen Klemmleiste WIELAND 93.420.4553.0 für schnellen Anschluß des Steuersignals (max. 2 x 0,75 mm<sup>2</sup>) angebracht

### ZUBEHÖR

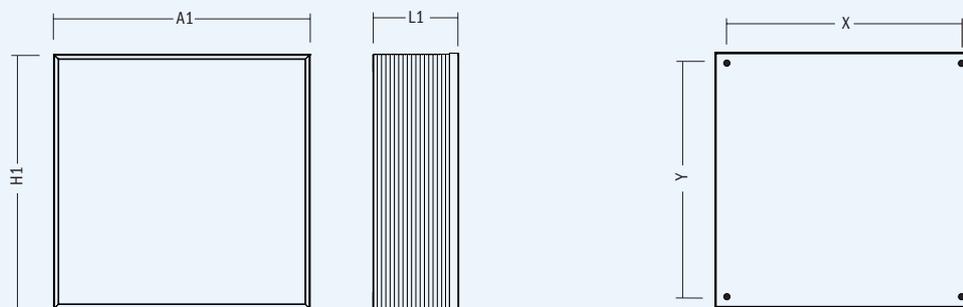

- Leuchtehalter für die Einbauvariante
- Hängezubehör
- verschiedene Typen des elektronischen Zubehörs, das die Programmierung der Farbszenen und die Bildung der Sequenzen nach den Vorstellungen des Benutzers ermöglicht (mehrere Informationen in technischer Anlage)

## THE DYNAMICS OF LIGHT AND COLOUR: BAR – BAR REFERENCE

### The project and the challenge

Skalica is smaller historical city placed in western part of Slovakia. In the silent part of the city is located building for sport and leisure time – squash centrum. This building consists of two parts – part for sport (two squash courts, showers) and relax part (bar). After squash game people can relax in next-door situated bar, called BAR-BAR. Bar is very good equipped with modern interior and very rich menu of alco and nealco drinks. The goal of the project was to realize some unique designed bar, which can simulate different feelings for people – either relax atmosphere after sport match – or different exciting atmospheres for evening party.

### Design

Equipment of the bar is in three basic tones – black, red and creamy. This classic bar-trio become a solid ground for a colour firework above them, so Bar could turn into a showroom of modern RGB technology. One of the features contributing to the right atmosphere for spending a few pleasant hours in the centre is the unusual lighting solution.

By creating of scenes architects solved completely different problem as few years ago: „To create similar colour show as we wanted to achieve before few years, was now child’s play. Now we could choose from infinite colour palette, we almost became crazy“, said lead architect of this project. After all they decided for 14 lighting scenes, from illusion of day light, through afternoon silent till evening club atmosphere.

### Dialux project

For better vision, how will final project look like, we simulate all scenes in the latest version of light calculation software – Dialux 4.3. It has several important improvements against the older versions, that helps planners especially with colour changing luminaires, the main are:

- calculating the light distribution, taking into account the spectral radiation of the light
- the selection of lamps from a lamp PlugIn for a desired luminaire; the selected lamp from a lamp PlugIn can contain the following information:
  - technical information like luminous flux, power consumption, voltage, etc.
  - a new light distribution curve (LDC) for example with reflector lamps
  - maintenance factors for the lamp
  - spectral light distribution
  - pictures, text, article names and numbers
  - further marketing relevant information
  - colour filters for luminaires. DIALux includes a large quantity of available and measured colour filters which influence in addition to the used lamp the spectral light distribution of the luminaire
- improved diagrams for the luminaire technique, better resolution and better design for the monitor and for the printouts
- a large quantity of new furniture and textures

### Components

In this installation we used 30 LED COB RGB panels and 17 special built in luminaires with T5 colour lamps. In the ceiling are built-in luminaires from CCS T5 range, improved only for this project. Concealed behind special diffuser material, designed to guarantee uniform light distribution and good colour intensity, are 2 green, 2 blue and 2 red T5 fluorescent lamps in each luminaire. They are operated on DALI electronic control gear units. DALI electronic control gear is characterised by optimised control of filament preheating as a function of dimming setting and luminous flux. This results in maximum lamp service life, even in the event of frequent and dynamic dimming operations.

DIGIDIM management system, completed with sequencer, is responsible for controlling the dynamic lighting solution in the bar area. In coordination with the architects and the builder owners, 14 coloured-light transition sequences were programmed, which can be called up very easily via an touch panels or a personal computer.

For atmosphere improvement and decoration of the bar, coloured balls were also used. There are colour changing RGB LEDs inside each ball, which are also individual adressable. As 64 addresses of DALI system was not enough for us, we have to group some luminaires equipped with 1-10V ballasts and control them with DALI/1-10V converters.

### Scene control

In places like this, an atmosphere in which people feel comfortable guarantees that customers stay longer and spend correspondingly much money. The illuminated wall and the illuminated ceiling contribute to creating pleasant surroundings, which was an important reason for deciding in favour of this lighting concept. With its

3D vizualization of architect vision of the interior

3D vizualization from dialux software

coloured highlights and vivid dynamic transitions, the bright but glare-free light creates the desired, "consumption-promoting" atmosphere.

Up to 16 lighting groups can be assigned and, in addition, 16 lighting scenes can be programmed and recalled. Bar-men can very easily recall different colour scenes by simple pressing of pre-programmed button. For slowly changing from one colour scene to another we used special sequencer, which recalls DALI scenes automatically, in pre-defined time. This means that the atmosphere in the room can be changed constantly. Dynamic light grabs our attention and arouses our interest. Whether it's a gentle change of colour in a bar or spectacular lighting for a shop window display or event, the intensity and the colour of the light can be changed automatically or at the touch of a button to create the right effects for the particular application. Such effects are based on dimmable electronic control gear in conjunction with coloured fluorescent lamps and/or LED modules.

The Bar-Bar is impressive proof that innovative light concepts can be functional and aesthetically pleasing at the same time. The final effect seems very fine, helps to create complete different colour atmospheres, and becomes very attractive for visitors, because each time they can relax in different atmosphere.

# PLASTIC

## PLASTIC

**Tradičné svietidlá s plastovými difúzormi rôznych veľkostí a povrchov. V kombinácii s lineárnymi alebo kompaktnými žiarivkami nájdu široké uplatnenie v rôznych aplikáciách. Svietidlá sú určené pre montáž na povrch (Plast D umožňuje aj závesnú montáž).**

### KONŠTRUKCIA

**Telesá svietidiel (Chubby, M, P, C, D):** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela). Dva otvory pre vodiče, jeden opatrený gumenou prechodkou.

**Difúzor (Chubby, C):** vyrobený z PMMA v opálovom alebo prizmatickom prevedení

**Difúzor (M, P):** vyrobený z polystyrénu (PS) v opálovom alebo prizmatickom prevedení

**Difúzor (D):** vyrobený z polykarbonátu (PC) v opálovom prevedení

**Koncovky (Chubby, M, P):** biely polystyrén (PS)

Plastový difúzor (Chubby, M, P) je uchytený za plechovým lemom svietidla fixovaný koncovkami na pružinách. Difúzor (C, D) je k telesu svietidla prichytený otočnými klipsami. Tieto riešenia umožňujú jednoduchý prístup do svietidiel a beznástrojovú výmenu svetelných zdrojov. Všetky plastové difúzory sú UV stabilizované.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm), kompaktné žiarivky TC-L, TC-S, TC-DD (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- skrutkovacia svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny (verzie 1x36/58W len s 1h)

## PLASTIC

**Traditional light fittings with plastic diffusers of various sizes and surfaces. Combined with linear or compact fluorescent lamps, they can be used in numerous applications. The light fittings are designed for surface installation (Plast D also allows pendant installation).**

### CONSTRUCTION

**Housing (Chubby, M, P, C, D):** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white). Two openings for conductors, one equipped with a rubber reducer

**Diffuser (Chubby, C):** made of PMMA in opal or prismatic finish

**Diffuser (M, P):** made of polystyrene (PS) in opal or prismatic finish

**Diffuser (D):** made of polycarbonate (PC) in opal finish

**Endings (Chubby, M, P):** white polystyrene (PS)

The plastic diffuser (Chubby, M, P) is attached behind the rim of the light fixture and fixed by endings on springs. The diffuser (C, D) is attached to the body by rotating clips. Such solutions allow easy access to the light fixture and tool-free lamp replacement. All plastic diffusers are UV-stabilised.

### WIRING

**Light fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, lighting fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signals)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm), compact fluorescent lamps TC-L, TC-S, TC-DD (lamps must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> diameter
- a screw terminal allows connecting conductors up to 2.5 mm<sup>2</sup> cross-section
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request (version 1x36/58W only 1 hr)

## PLASTIC

**Traditionelle Leuchten mit Kunststoffdiffusoren verschiedener Größen und Oberflächen. In der Kombination mit linearen oder kompakten Leuchtstoffröhren kommen sie in verschiedenen Applikationen zur Geltung. Die Leuchten sind zum Oberflächeneinbau bestimmt (Kunststoff D ermöglicht auch den Hängeeinbau).**

### KONSTRUKTION

**Leuchtenkörper (Chubby, M, P, C, D):** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (Signalweiß). Zwei Öffnungen für Leiter, eine ist mit Gummidurchführung versehen.

**Diffusor (Chubby, C):** aus PMMA in einer Opalausführung oder einer prismatischen Ausführung hergestellt

**Diffusor (M, P):** aus Polystyrol (PS) in einer Opalausführung oder einer prismatischen Ausführung hergestellt

**Diffusor (D):** aus Polykarbonat (PC) in einer Opalausführung hergestellt

**Endstücke (Chubby, M, P):** weißes Polystyrol (PS)

Der Kunststoffdiffusor (Chubby, M, P) ist hinter dem Blechsaum der Leuchte befestigt und mit Endstücken an den Federn fixiert. Der Diffusor (C, D) ist an den Leuchtenkörper mit Drehclips befestigt. Diese Lösungen ermöglichen einfachen Zugang zu Leuchten und Austausch der Lichtquellen ohne Werkzeug. Alle Kunststoffdiffusoren sind UV-stabilisiert.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, Klasse EEI=B1 auf Wunsch, Leuchten sind nicht standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

**Andere Komponente:**

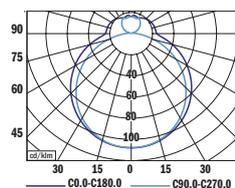

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm), kompakte Leuchtstofflampen TC-L, TC-S, TC-DD (die Lichtquellen sind extra zu bestellen)
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine Schraubklemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Leuchten können auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden ausgerüstet werden (Ausführungen 1x36/58W nur mit 1 Std.)

## PLAST H

## PLAST H

Svietidlo jednoduchého účelného dizajnu s plastovým difúzorom dostupné v rôznych dĺžkových prevedeniach. Vďaka zvýšenej odolnosti proti vniknutiu pevných predmetov a striekajúcej vode nájde uplatnenie v rôznych aplikáciách - obzvlášť tam, kde je vyžadovaná rýchla inštalácia, jednoduchá údržba a čistenie svietidiel, resp. v priestoroch so zvýšeným rizikom korózie.

### KONŠTRUKCIA

**Teleso svietidla:** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou –základný odtieň RAL 9003 (signálna biela). Dva otvory pre vodiče (možná priebežná montáž).

**Difúzor:** číry alebo opálový polykarbonát

**Koncovky:** biely polykarbonát. Tri oslabené miesta pre vytvorenie otvorov pre vodiče v každej koncovke (možná priebežná montáž).

Plastový difúzor je uchytенý za plechovým lemom svietidla bez akýchkoľvek skrutiek. Toto riešenie umožňuje jednoduchý prístup do svietidla a beznástrojovú výmenu svetelných zdrojov.

### ELEKTRICKÁ VÝBAVA

Svietidlá môžu byť vybavené:

- elektronickými predradníkmi, štandardne triedy EEL=A2
- stmievateľnými elektronickými predradníkmi, trieda EEL=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>, držiaky proti vytrhnutiu vodičov zo svorkovnice
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

### PRÍSLUŠENSTVO

- gumenné prechodky pre káble (súčasť balenia)
- závesné príslušenstvo
- troj alebo päť žilové vedenie s pevným medeným jadrom prierezu 1,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C) pre možnosť priebežnej montáže

## PLAST H

**A light fixture with a simple and practical design, including a plastic diffuser, available in various lengths. Thanks to its higher protection to solid objects and wet conditions, it can be used in many applications – especially where fast installation, easy maintenance and fixture cleaning are required or in places with a higher risk of corrosion.**

### CONSTRUCTION

**Housing:** sheet steel, electrostatic powder coat finish – basic shade RAL 9003 (signal white). Two openings for conductors (through wiring possible)

**Diffuser:** clear or opal polycarbonate

**Ends:** white polycarbonate. Three pre-weakened spots to create holes for conductors in each end (through wiring possible)

The plastic diffuser is attached with no screws behind the rim of the light fixture. Such a solution allows easy access to the light fixture and tool-free lamp replacement.

### WIRING

**Light fixtures can be equipped with:**

- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- a screwless three or five pole connector allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section, holders to prevent the conductors from detaching
- an emergency version of light fixtures with autonomous operation of 1 or 3 hours is available on request

### ACCESSORIES

- rubber reducers for cables (part of delivery)
- suspension accessories
- PVC insulated solid copper three- or five-core conductors with 1.5 mm<sup>2</sup> in diameter (heat resistant up to 90°C) for the option of through wiring

## PLAST H

**Leuchten mit einfachem zweckdienlichen Design mit einem Kunststoffdiffusor, die in verschiedenen Längenausführungen verfügbar sind. Dank erhöhtem Widerstand gegen Eindringung von festen Gegenständen und spritzendem Wasser kommt sie in verschiedenen Applikationen zur Geltung – besonders dort, wo schnelle Installation, einfache Wartung und Reinigung der Leuchten gefordert ist, bzw. in Räumlichkeiten mit erhöhtem Korrosionsrisiko**

### KONSTRUKTION

**Leuchtenkörper:** Stahlblech, Oberflächenbehandlung mit elektrostatisch beschichteter Pulverfarbe - Grundton RAL 9003 (Signalweiß). Zwei Öffnungen für Leiter (möglicher durchgehender Einbau).

**Diffusor:** Klar- oder Opalpolykarbonat

**Endstücke:** weißes Polykarbonat. Drei abgeschwächte Stellen für die Bildung von Öffnungen für Leiter in jedem Endstück (möglicher durchgehender Einbau)

Der Kunststoffdiffusor ist hinter dem Blechsaum der Leuchte ohne Schrauben befestigt. Diese Lösung ermöglicht einfachen Zugang in die Leuchte und den Austausch der Lichtquellen ohne Werkzeug.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können wie folgt ausgerüstet sein:**

- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit elektronischen Dimmervorschaltgeräten, Klasse EEI=A1 (Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert werden)

**Andere Komponente:**

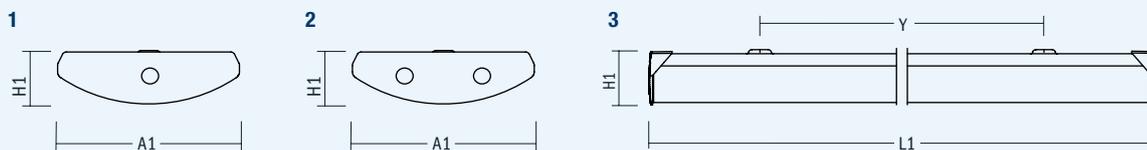

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm) - die Lichtquellen sind extra zu bestellen
- Innenleiter mit festem Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen, die Halter gegen Ausreißen der Leiter aus der Klemmleiste
- Leuchten können auf Wunsch mit Noteinheiten mit Autonometrieb von 1 oder 3 Stunden ausgerüstet werden

### ZUBEHÖR

- Gummidurchführungen für Kabel (Bestandteil der Packung)
- Hängezubehör
- eine dreidradige oder fünfadriges Leitung mit festem Kupferkern mit einem Durchmesser von 1,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)

## PLAST 1/2/3/4

### PLAST 1/2/3/4

#### KONŠTRUKCIA

**Telesá svietidiel (Plast 1, 2, 3, 4):** biely polykarbonát (PC). Jeden otvor pre prívodný vodič.

**Difúzor (Plast 1, 3):** polykarbonát v opálovom prevedení

**Difúzor (Plast 4):** polykarbonát v prizmatickom prevedení

**Difúzor (Plast 2):** PMMA v opálovom prevedení

**Klipsy:** polykarbonát

Plastový difúzor (verzie Plast 1/3/4) je uchytený k telesu svietidla pomocou dvoch polykarbonátových klipsov. Plastový difúzor pre svietidlo Plast 2 sa beznástrojovo uchytáva do spodku svietidla. Difúzor je utesený gumeným tesnením zabezpečujúcim krytie IP54/IP65 (Plast 2).

Všetky spôsoby uchytenia difúzorov umožňujú jednoduchý prístup do svietidiel a beznástrojovú výmenu svetelných zdrojov. Plastové difúzory sú UV stabilizované.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované

**Ostatné komponenty:**

- svetelné zdroje: žiarovky IT, kompaktné žiarivky TC-L, TC-S, TC-DD, kruhové žiarivky T-R (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- skrutkovacia trojpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny (platí len pre Plast 1/3/4 s priemerom 360mm - verzie 1x28/38W)

#### PRÍSLUŠENSTVO

- gumenné priechodky pre káble (súčasť balenia pre Plast 2)

## PLAST 1/2/3/4

### CONSTRUCTION

**Lamp bodies (Plast 1, 2, 3, 4):** white polycarbonate (PC). One slot for supply wire.

**Diffuser (Plast 1, 3):** polycarbonate in opal version

**Diffuser (Plast 4):** polycarbonate in prismatic version

**Diffuser (Plast 2):** PMMA in opal version

**Clips:** polycarbonate

The plastic diffuser (Plast 1/3/4 version) is mounted to the lamp housing by two polycarbonate clips. The plastic diffuser of the Plast 2 lamp will be mounted to the lamp bottom without instruments. The diffuser is sealed with rubber seal in order to cover the IP54/IP65 (Plast 2).

All types of diffuser mounting enable easy access to lamps and replacing of the light sources without instruments. The plastic diffusers are UV-stabilized.

### ELECTRIC EQUIPMENT

**The lamps can be equipped with:**

- conventional magnetic ballasts, medium-size category EEI=B2, EEI=B1 class on demand, the lamps are not standard compensated

**Other components:**

- light sources: IT fluorescent lamps, TC-L, TC-S, TC-DD fluorescent lamps, circular fluorescent lamps T-R (the light sources must be ordered separately)
- inner conductors with solid copper cross-section core 0,5 mm<sup>2</sup> in PVC insulation (thermal protection to 90°C)
- screw three pole terminal plates, which allow connecting wires with a cross-section to max. 2, 5 mm<sup>2</sup>
- the lamps can be on demand equipped with emergency units, which can be automatically operated from 1 to 3 hours (valid only for Plast 1/3/4 with 360mm diameter - versions 1x28/38W)

### ACCESSORIES

- rubber cable grommets (part of the package for Plast 2)

## PLAST 1/2/3/4

### KONSTRUKTION

**Leuchtenkörper (Kunststoff 1, 2, 3, 4):** weißes Polykarbonat (PC). Eine Öffnung für den Speiseleiter

**Diffusor (Kunststoff 1, 3):** Polykarbonat in einer Opalausführung

**Diffusor (Kunststoff 4):** Polykarbonat in einer prismatischen Ausführung

**Diffusor (Kunststoff 2):** PMMA in einer Opalausführung

**Klipps:** Polykarbonat

Der Kunststoffdiffusor (Ausführung Kunststoff 1/3/4) ist zum Leuchtenkörper mittels zwei Polykarbonatklipps befestigt. Der Kunststoffdiffusor für den Kunststoff 2 wird in den Unterteil der Leuchte ohne Werkzeug befestigt. Der Diffusor ist mit einer Gummidichtung gedichtet, die die Schutzart IP54/IP65 sichert (Kunststoff 2).

Alle Arten der Befestigung von Diffusoren ermöglichen den einfachen Zugang in die Leuchten und den Austausch der Lichtquellen ohne Werkzeug. Die Kunststoffdiffusoren sind UV-stabilisiert.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten können ausgerüstet sein:

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch, die Leuchten sind nicht standardmäßig kompensiert

**Andere Komponenten:**

- Lichtquellen: Glühlampen IT, kompakte Leuchtstofflampen TC-L, TC-S, TC-DD, kreisförmige Leuchtstofflampen T-R (es ist notwendig die Lichtquellen extra zu bestellen)
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine Schraubklemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- es ist möglich die Leuchten auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden auszurüsten (es gilt nur für den Kunststoff 1/3/4 mit dem Durchmesser von 360 mm - Ausführungen 1x28/38W)

### ZUBEHÖR

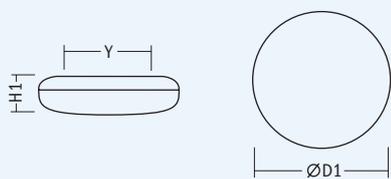

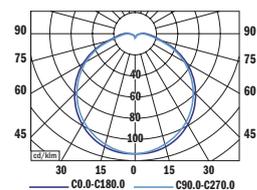

- Gummidurchführungen für Kabel (Bestandteil der Packung für den Kunststoff 2)

## FORWALL

## FORWALL

**Nástenné svietidlá s plastovým difúzorom dostupné v troch tvarových prevedeniach. Vďaka zvýšenej odolnosti proti vniknutiu pevných predmetov a striekajúcej vode nájdu uplatnenie v rôznych aplikáciách - obzvlášť tam, kde je vyžadovaná rýchla inštalácia, jednoduchá údržba a čistenie svietidiel, resp. v priestoroch so zvýšeným rizikom korózie.**

### KONŠTRUKCIA

Plechová inštaláčna doska s otvormi pre montáž na povrch. Jeden otvor pre prívodný vodič.

**Teleso svietidla:** každý rad používa dva typy plastových rámkov, rozlišiteľných ako typy 11/12, 21/22 a 31/32. Rámiky sú vyrobené z polykarbonátu, uchytené k svietidlu dvomi skrutkami. Možnosť výberu z dvoch farieb – čiernej a bielej.

**Difúzor:** priesvitný alebo opálový polykarbonát. Plastový difúzor je skrutkami uchytený k telesu svietidla a prekrytý plastovým rámkom. Plastové difúzory sú UV stabilizované.

### ELEKTRICKÁ VÝBAVA

Svietidlá sú vybavené konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie.

#### Ostatné komponenty:

- svetelné zdroje: žiarovky A60, kompaktné žiarivky TC-S, TC-DD, kruhové žiarivky T-R (svetelné zdroje je nutné objednať zvlášť)
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková trojpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>

### PRÍSLUŠENSTVO

- gumenné priechodky pre káble (súčasť balenia)

## FORWALL

**Wall-mounted luminaries with plastic diffusers, available in three shapes. Thanks to its higher resistance to solid objects and splashing water, it can be used in many applications – especially where fast installation, easy maintenance and cleaning of luminaries is required, or in places with higher risk of corrosion.**

### CONSTRUCTION

Metal installation plate with holes for surface mounting. One opening for the conductor.

**Housing:** each range uses two types of plastic frame, distinguishable as type 11/12, 21/22 and 31/32. The frames are made of polycarbonate and attached to the luminaire using two screws. Two colour options are available - black and white.

**Diffuser:** transparent or opal polycarbonate. The plastic diffuser is screwed to the body and covered with a plastic frame. Plastic diffusers are UV-stabilised.

### WIRING

The luminaries are equipped with conventional magnetic control gears, standard class EEI=B2, class EEI=B1 is available on request.

#### Other components:

- lamps: A60 lamps, TC-S and TC-DD compact fluorescent lamps, T-R round fluorescent lamps (light sources must be ordered separately)
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- screwless three-pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section

### ACCESSORIES

- rubber reducers for cables (part of delivery)

## FORWALL

**Die Wandleuchten mit einem Kunststoffdiffusor, die in drei Formausführungen verfügbar sind. Dank der erhöhten Beständigkeit gegen die Eindringung von festen Gegenständen und spritzendem Wasser kommen sie in verschiedenen Applikationen zur Geltung – hauptsächlich dort, wo schnelle Installation, einfache Wartung und Reinigung von Leuchten erfordert sind, bzw. in Räumen mit erhöhtem Risiko vom Korrosion.**

### KONSTRUKTION

Die Blech-Installationsplatte mit Öffnungen für die Aufputzmontage. Eine Öffnung für den Zuführungsleiter.

**Leuchtenkörper:** jede Reihe verwendet zwei Typen der Kunststoffrahmen, die als Typen 11/12, 21/22 und 31/32 erkennbar sind. Die Rahmen sind aus dem Polycarbonat hergestellt, mit zwei Schrauben zu der Leuchte befestigt. Die Möglichkeit der Auswahl aus zwei Farben – schwarzer und weißer.

**Diffusor:** durchsichtiges Polycarbonat oder Opalpolycarbonat. Der Kunststoffdiffusor ist zum Leuchtenkörper mit Schrauben befestigt und mit dem Kunststoffrahmen verdeckt. Die Kunststoffdiffusoren sind UV-stabilisiert.

### ELEKTRISCHE AUSRÜSTUNG

Die Leuchten sind mit konventionellen magnetischen Vorschaltern ausgerüstet, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch.

#### Andere Komponenten:

- Lichtquellen: Glühlampen A60, kompakte Leuchtstofflampen TC-S, TC-DD, Rundleuchtstofflampen T-R (es ist notwendig die Lichtquellen extra zu bestellen)
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen

# EMERGENCY

## EMERGENCY

Svietidlá určené pre priestory, v ktorých je vyžadované náhradné alebo núdzové osvetlenie. Svetidlá sú trvalo napájané zo siete aby ich vnútorné batérie boli vždy nabité. Všetky žiarivkové modely z radu núdzových svietidiel disponujú LED kontrolkou, ktorá svieti v prípade napájania zo siete a nabíjacej fázy batérie. Tlačidlom TEST sa dá skontrolovať funkčnosť núdzového obvodu svietidla ako aj svetelného zdroja počas napájania zo siete. Nikel-kadmiové (Ni-Cd) batérie zaručujú vysokú spoľahlivosť a dlhú životnosť.

Svietidlá používajú dva typy štítkov – „pictogram“ a „universal pictogram“. Pri objednávke svietidla s „pictogram universal label“ štítkom sú v jednom balení spolu so svietidlom samolepiace piktogramy potrebné na vytvorenie všetkých možných smerov úniku. Pri objednávke „pictogram“ svietidiel musí zákazník presne určiť žiadanú nálepku.

Zákazník si všeobecne môže vybrať medzi dvomi typmi núdzového zapojenia svietidiel:

### **Svietidlá pre netrvalú prevádzku**

Tieto svietidlá sú v prevádzke len počas výpadku napájania siete. Pozostávajú z nabíjacieho obvodu, nabíjateľných Ni-Cd batérií, kontrolného obvodu a obvodu zabezpečujúceho štart žiarivky, pokiaľ ju svietidlo používa.

### **Svietidlá pre trvalú prevádzku**

Svietidlá tohto typu sú v prevádzke aj počas sieťového napájania, aj počas jeho výpadku. Pre obidva prípady je používaný rovnaký svetelný zdroj. Skladajú sa z predradníka pre svetelný zdroj na sieťové napájanie (obvyčajne elektronický predradník), nabíjacieho obvodu, nabíjateľných Ni-Cd batérií, kontrolného obvodu a invertora pre žiarivku, pokiaľ ju svietidlo používa.

## EMERGENCY

The luminaries are designed for spaces where substitute or emergency illumination is required. They are constantly powered so that their internal batteries are always charged. All fluorescent luminaires in emergency range incorporate a charge LED indicator that lights during the main power supply presence and battery charging phase. The TEST button can be used to check emergency circuit of the luminaire as well as lighting source when the mains power supply is present. Ni-Cd batteries ensure high reliability and long lifespan.

The luminaries use two types of labels – „pictogram“ and „universal pictogram“. The packing of a „universal pictogram label“ luminaire includes pictogram stickers needed to create all possible exit directions. When ordering „pictogram“ luminaries, customer must specify the required sticker.

Generally, customers can choose between two types of emergency connection of luminaries:

### NON-MAINTAINED EMERGENCY LUMINAIRES

These luminaries are in operation only during power failures. They consist of a charge circuit, rechargeable Ni-Cd batteries, control circuit and a circuit to ensure start of the fluorescent lamp operation, if it is used by the luminaire.

### MAINTAINED EMERGENCY LUMINAIRES

Luminaries of this type are in operation when power is on, as well as during power failures. Both cases use the same source of light. They consist of a light source voltmeter box for power connection (usually an electronic box), charge circuit, rechargeable Ni-Cd batteries, control circuit and fluorescent lamp inverter, if it is used by the luminaire.

## EMERGENCY

Die für die Räume bestimmten Leuchten, in denen die Reserve- oder Notbeleuchtung erfordert ist. Die Leuchten sind aus dem Netz ständig gespeist, damit ihre inneren Batterien immer aufgeladen sind. Alle Leuchtstoffmodelle aus der Reihe der Notleuchten verfügen über eine Kontrolleuchte, die im Fall der Speisung aus dem Netz und der Ladephase der Batterie leuchtet. Mit dem TEST-Knopf kann die Funktionsfähigkeit der Notschaltung der Leuchte und der Lichtquelle während der Speisung aus dem Netz überwacht werden. Die Nickel-Kadmium-Batterien (Ni-Cd) gewährleisten hohe Zuverlässigkeit und lange Lebensdauer.

Die Leuchten benutzen zwei Typen der Schilder – „pictogram“ und „universal pictogram“. Bei der Bestellung der Leuchte mit dem Schild „pictogram universal label“ sind in einer Packung selbstklebende Piktogramme zusammen mit der Leuchte, die zur Bildung aller möglichen Fluchrichtungen notwendig sind. Bei der Bestellung der Leuchten „pictogram“ muß der Kunde das gewünschten Schild genau bestimmen.

Die Kunden können im allgemeinen zwischen zwei Typen der Noteinschaltung der Leuchten wählen:

### Leuchten für einen nicht dauerhaften Betrieb

Diese Leuchten sind im Betrieb nur während des Ausfalls der Netzspeisung. Sie bestehen aus einer Ladeschaltung, aufladenden Ni-Cd Batterien, einer Kontrollschaltung und einer Schaltung, die die Anlassung der Leuchtstoffröhre sichert, soweit sie in der Leuchte verwendet ist.

### Die Leuchten für einen dauerhaften Betrieb

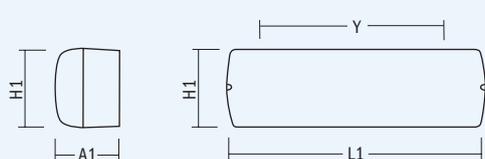

Die Leuchten von diesem Typ sind im Betrieb auch während der Netzspeisung und auch während ihres Ausfalls. Für beide Fälle ist die gleiche Lichtquelle verwendet. Sie bestehen aus einem Vorschalter für die Lichtquelle für Netzspeisung (in der Regel aus einem elektronischen Vorschalter), einer Ladeschaltung, aufladenden Ni-Cd Batterien, einer Kontrollschaltung und eines Inverters für die Leuchtstoffröhre, soweit sie in der Leuchte verwendet ist.

## SIMPLE

### KONŠTRUKCIA

**Teleso svietidla (TS/PS):** oceľový plech, povrchovo upravený elektrostaticky nanášanou práškovou farbou - základný odtieň RAL 9003 (signálna biela, lesklá)

**Teleso svietidla (US):** biely lakoplastovaný plech

**Teleso svietidla (WS):** polyester, vystužený sklenými vláknami

**Koncovky svietidiel:** polystyrén (rad TS), polykarbonát (rad PS/US)

**Reflektor:** leštený hliník alebo na bielo nastriekaný plech (RAL 9003 – signálna biela)

Pre svietidlá Simple WS je na požiadanie možné dodať kryty žiaroviek z číreho polykarbonátu.

### ELEKTRICKÁ VÝBAVA

#### Svietidlá môžu byť vybavené:

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

#### Ostatné komponenty:

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny (okrem verzií 18W a 2x36W CCG)

### PRÍSLUŠENSTVO

- závesné príslušenstvo

## SIMPLE

### CONSTRUCTION

**Luminaire housing (TS/PS):** sheet steel, finished with electrostatic powder coating – basic shade RAL 9003 (signal white, glossy)

**Housing (US):** white plastic-varnished metal sheet

**Housing (WS):** fibreglass-reinforced polyester

**Luminaire endings:** polystyrene (TS range), polycarbonate (PS/US range)

**Reflector:** polished aluminium or white painted metal sheet (RAL 9003 – signal white)

Simple WS luminaires can be equipped with pure polycarbonate lamp covers on request.

### WIRING

**Lighting fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, lighting fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- emergency version of lighting fixtures with autonomous operation 1 or 3 hours is available on request (except versions 1x18W and 2x36W CCG)

### ACCESSORIES

- suspension accessories

## SIMPLE

### KONSTRUKTION

**Leuchtenkörper (TS/PS):** Stahlblech, Oberflächenbehandlung mit einer elektrostatisch beschichteten Pulverfarbe - Grundton RAL 9003 (signalweiß, glänzend).

**Leuchtenkörper (US):** weißes Blech mit Lack-Kunststoffbeschichtung

**Leuchtenkörper (WS):** mit Glasfasern bewehrtes Polyester

**Endstücke der Leuchten:** Polystyrol (Reihe TS), Polykarbonat (Reihe PS/US)

**Reflektor:** poliertes Aluminium oder weiß aufgespritztes Blech (RAL 9003 – Signalweiß)

Es ist möglich, für die Leuchten Simple WS die Deckel der Leuchtstoffröhren aus klarem Polykarbonat auf Wunsch zu liefern.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch, die Leuchten sind nicht standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

**Andere Komponenten:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm) - es ist notwendig die Lichtquellen extra zu bestellen
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- es ist möglich die Leuchte auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden auszurüsten (außer den Ausführungen 18W a 2x36W CCG)

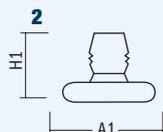

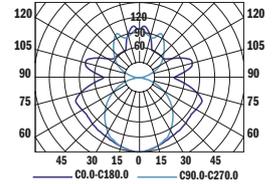

### ZUBEHÖR

- Hängezubehör

## TORNADO

**Prachotesné a vodeodolné svietidlo pre lineárne žiarivky s uplatnením v prostrediach s prítomnosťou prachu, špiny, výparov, dymu, so zvýšenou vlhkosťou a rizikom korózie. Možnosť prisadenej alebo závesnej inštalácie. V ponuke aj verzia do prostredia s nebezpečenstvom výbuchu (viac informácií v technickej prílohe).**

### KONŠTRUKCIA

**Teleso svietidla (Tornado PC):** vstrekovaný polykarbonát, šedý

**Teleso svietidla (Tornado PX.ABS):** vstrekovaný ABS, šedý

**Difúzor (Tornado PC):** vstrekovaný polykarbonát, číry

**Difúzor (Tornado PX.ABS):** vstrekovaný polystyrén, číry

**Reflektor:** pre všetky verzie na požiadanie prídavný vrchný reflektor (verzia REF) – symetrický alebo asymetrický

**Klipsy (Tornado PC):** polykarbonátové alebo z nehrdzavejúcej ocele (inox)

**Klipsy (Tornado PX.ABS):** polyamidové alebo z nehrdzavejúcej ocele (inox)

**Inštaláčna doska:** ocelový plech, zvrchu povrchovo upravený (RAL 9003 – biela)

Na inštaláčnej doske svietidla sú umiestnené všetky elektrické komponenty. Pre priebežnú montáž môže byť v svietidlách vedená troj alebo päťžilová kabeláž. Difúzor je vložený do drážky telesa svietidla vyplnenej polyuretánovým tesnením a prichytený klipsami. Tornado umožňuje rýchlu beznástrojovú výmenu svetelných zdrojov. Súčasťou balenia sú inštaláčne klipsy z nerezovej ocele, určené pre prisadenú montáž svietidla. V prípade závesnej montáže sa na klips jednoducho pripevní držiak závesu.

### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16mm), T8 (26mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny

### PRÍSLUŠENSTVO

- troj alebo päť žilové vedenie s pevným medeným jadrom prierezu 2,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C) pre možnosť priebežnej montáže
- konektory WIELAND s krytím IP65
- prechodky PG 13,5
- závesné príslušenstvo
- vyhotovenie svietidla v triede II

## TORNADO

**Dust-resistant and waterproof luminaire for linear fluorescent lamps for use in environments involving dust, dirt, vapours, smoke, increased humidity and risk of corrosion. Possibility of surface or pendant installation. Also available in a version for explosive environments (for more information see the technical appendix).**

### CONSTRUCTION

**Body (Tornado PC):** inject polycarbonate, grey

**Body (Tornado PX.ABS):** inject ABS, grey

**Diffuser (Tornado PC):** inject polycarbonate, pure

**Diffuser (Tornado PX.ABS):** inject polystyrene, pure

**Reflector:** additional top reflector (REF version) for all versions available on request – symmetrical or asymmetrical

**Clips (Tornado PC):** polycarbonate or stainless steel (inox)

**Clips (Tornado PX.ABS):** polyamide or stainless steel (inox)

**Installation plate:** metal sheet, surface finished (RAL 9003 – white)

The installation plate of the luminaire contains all electronic components. Three- or five-core cabling can be used in the luminaire for through wiring installation. The diffuser is embedded in the luminary body groove filled with polyurethane sealing and attached using clips. Tornado allows fast toolless luminary replacement. Rustfree steel installation clips designed for surface installation of the luminaire are included in packing. In case of pendant installation, holder is simply attached to the clip.

### WIRING

**Lighting fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, lighting fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- emergency version of lighting fixtures with autonomous operation 1 or 3 hours is available on request

### ACCESSORIES

- PVC insulated solid copper three- or five-core conduction with 2.5 mm<sup>2</sup> diameter (heat resistant up to 90°C) for the option of through wiring installation
- WIELAND connectors with IP65 protection
- PG 13,5 grommet
- Suspension accessories
- class II luminaire version

## TORNADO

**Eine staubdichte und wasserbeständige Leuchte für lineare Leuchtstofflampen mit Anwendung in den Umgebungen mit Staub, Schmutz, Dunst, Rauch, erhöhter Feuchte und Risiko der Korrosion. Die Möglichkeit der Anbau- oder Hängeinstallation. Im Angebot ist auch die Ausführung in die Umgebung mit Explosionsgefahr (mehr Informationen in technischer Anlage).**

### KONSTRUKTION

**Leuchtenkörper (Tornado PC):** eingespritztes graues Polykarbonat

**Leuchtenkörper (Tornado PX.ABS):** eingespritztes graues ABS

**Diffusor (Tornado PC):** eingespritztes klares Polykarbonat

**Diffusor (Tornado PX.ABS):** eingespritztes klares Polystyrol

**Reflektor:** für alle Ausführungen ein zusätzlicher Oberreflektor (Ausführung REF) auf Wunsch – symmetrischer oder asymmetrischer

**Klipps (Tornado PC):** aus Polykarbonat oder aus rostfreiem Stahl (inox)

**Klipps (Tornado PX.ABS):** aus Polyamid oder aus rostfreiem Stahl (inox)

**Installationsplatte:** Stahlblech, von oben mit Oberflächenbehandlung (RAL 9003 – weiß)

Auf der Installationsplatte sind alle elektrische Komponente angebracht. Für durchlaufenden Einbau kann in den Leuchten eine drei- oder fünfadrig Verkabelung geführt werden. Der Diffusor ist in die Rille des Leuchtenkörpers angebracht, die mit Polyurethandichtung gefüllt ist und er ist mit Klipps befestigt. Tornado ermöglicht einen schnellen Austausch der Lichtquellen ohne Werkzeug. Den Bestandteil der Packung bilden die Installationsklipps aus rostfreiem Stahl, die für die Anbaumontage der Leuchte bestimmt sind. Im Fall der Hängemontage wird der Halter der Aufhängung auf den Klipp einfach befestigt.

### ELEKTRISCHE AUSTRÜSTUNG

**Die Leuchten können ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch, die Leuchten sind nicht standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräte können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

**Andere Komponenten:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm) - es ist notwendig die Lichtquellen extra zu bestellen
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- es ist möglich die Leuchte auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden auszurüsten (außer der Ausführung 18W)

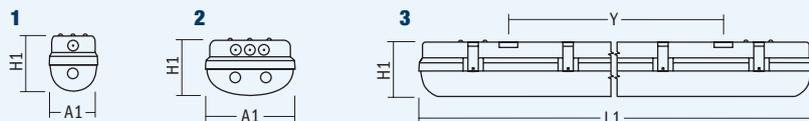

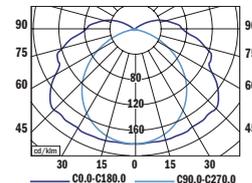

### ZUBEHÖR

- eine drei- oder fünfadrig Leitung mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C) für die Möglichkeit des durchgehenden Einbaus
- Verbindungsstecker WIELAND mit Schutzart IP65
- Durchführungen PG 13,5
- Hängezubehör
- Ausfertigung der Leuchte in der Klasse II

## STEEL

### TORNADO STAINLESS STEEL

**Prachotesné a vodeodolné svietidlo pre lineárne žiarivky so zvýšenou mechanickou odolnosťou, s uplatnením v prostrediach s prítomnosťou prachu, špiny, výparov, dymu, všade tam, kde je vyžadovaná vysoká odolnosť voči korózii alebo chemickým látkam, alebo kde je zvýšené riziko mechanického poškodenia. Svietidlo určené pre závesnú montáž.**

#### KONŠTRUKCIA

**Teleso svietidla:** nerezová oceľ

**Difúzor:** kalené sklo, opieskované na okrajoch

**Reflektor:** pre všetky verzie na požiadanie prídavný vrchný reflektor (verzia REF)

**Klipsy:** z nehrdzavejúcej ocele, poistné skrutky

**Inštalčná doska:** ocelový plech, zvrchu povrchovo upravený (RAL 9003 – biela)

Na inštallačnej doske svietidla sú umiestnené všetky elektrické komponenty. Krycie sklo je položené na gumenom tesnení uloženom po celom obvode svietidla a prichytené nerezovými klipsami. Klipsy sú proti otvoreniu zaistené skrutkami. Krycie sklo je k inštallačnej doske prichytené dvomi lankami, čo zjednodušuje výmenu svetelných zdrojov. Súčasťou balenia sú inštallačné podložky z nerezovej ocele spolu s gumenými podložkami.

#### ELEKTRICKÁ VÝBAVA

**Svietidlá môžu byť vybavené:**

- konvenčnými magnetickými predradníkmi, štandardne triedy EEI=B2, trieda EEI=B1 na požiadanie, svietidlá nie sú štandardne kompenzované
- elektronickými predradníkmi, štandardne triedy EEI=A2
- stmievateľnými elektronickými predradníkmi, trieda EEI=A1 (predradníky môžu byť riadené analógovým, digitálnym alebo DALI signálom)

**Ostatné komponenty:**

- svetelné zdroje: lineárne žiarivky T5 (16 mm), T8 (26 mm) - svetelné zdroje je nutné objednať zvlášť
- vnútorné vodiče s pevným medeným jadrom prierezu 0,5 mm<sup>2</sup> v PVC izolácii (teplotná odolnosť do 90°C)
- bezskrutková troj- alebo päťpólová svorkovnica umožňuje pripojiť vodiče do prierezu max. 2,5 mm<sup>2</sup>
- kovová prechodka PG 13,5
- svietidlá je na požiadanie možné vybaviť núdzovými jednotkami s autonómnou prevádzkou 1 alebo 3 hodiny (okrem 18W verzie)

#### PRÍSLUŠENSTVO

- konektory WIELAND s krytím IP65
- závesné príslušenstvo

## TORNADO STAINLESS STEEL

**Dust-resistant and waterproof luminaire for linear fluorescent lamps with increased mechanical resistance, usable in environments involving dust, dirt, vapours, smoke, or where there is a high resistance to corrosion or chemical substances required, or where an increased risk of mechanical damage exists. Luminaire is designed for pendant installation.**

### CONSTRUCTION

**Housing:** stainless steel

**Diffuser:** hardened glass, sandblasted on the sides

**Reflector:** additional top reflector (REF version) for all versions available on request

**Clips:** stainless steel, secure screws

**Installation plate:** sheet steel, surface finished (RAL 9003 – white)

The installation plate of the luminaire contains all electronic components. Cover glass is laid on rubber sealing all across the luminaire circumference and attached using stainless clips. The clips are secured with screws against opening. The cover glass is attached to the installation plate with two wires, which makes replacement of light sources easier. Stainless steel installation plates together with rubber sealing are included in packing.

### WIRING

**Lighting fixtures can be equipped with:**

- conventional control gears, standard class EEI=B2, class EEI=B1 is available on request, lighting fixtures are not standardly compensated
- electronic control gears, standard class EEI=A2
- dimmable electronic control gears, class EEI=A1 (electronic control gears can be controlled with analogue, digital or DALI signal)

**Other components:**

- lamps: linear fluorescent lamps T5 (16 mm), T8 (26 mm) - lamps must be ordered separately
- solid copper internal conductors, PVC insulated (heat resistant up to 90°C) with 0.5 mm<sup>2</sup> cross-section
- screwless three or five pole terminal allows to connect conductors up to 2.5 mm<sup>2</sup> cross-section
- metal PG 13,5 grommet
- emergency version of lighting fixtures with autonomous operation 1 or 3 hours is available on request (except 18W version)

### ACCESSORIES

- WIELAND connectors with IP65 protection
- pendant accessories

## TORNADO STAINLESS STEEL

**Eine staubdichte und wasserbeständige Leuchte für lineare Leuchtstofflampen mit erhöhter mechanischer Beständigkeit, mit Anwendung in den Umgebungen mit Staub, Schmutz, Dunst, Rauch und dort, wo eine hohe Beständigkeit gegen Korrosion oder chemische Stoffe erfordert ist, oder dort, wo ein erhöhtes Risiko der mechanischen Beschädigung besteht. Die Leuchte ist zur Hängemontage bestimmt.**

### KONSTRUKTION

**Leuchtenkörper:** rostfreier Stahl

**Diffusor:** an Randen sandgestrahltes Hartglas

**Reflektor:** für alle Ausführungen ein zusätzlicher Oberreflektor (Ausführung REF) auf Wunsch

**Klipps:** aus rostfreiem Stahl, Sicherungsschrauben

**Installationsplatte:** Stahlblech, von oben mit Oberflächenbehandlung (RAL 9003 – weiß)

Auf der Installationsplatte der Leuchte sind alle elektrische Komponenten angebracht. Das Deckglas ist auf der Gummidichtung gelegt, die entlang der ganzen Leuchte gelegt ist und es ist mit rostfreien Klipps befestigt. Klipps sind gegen Öffnen mit Schrauben gesichert. Das Deckglas ist zur Installationsplatte mit zwei Seilen befestigt, was den Austausch der Lichtquellen vereinfacht. Den Bestandteil der Packung bilden die Installationsunterlagen aus rostfreiem Stahl zusammen mit Gummiunterlagen.

### ELEKTRISCHE AUSRÜSTUNG

**Die Leuchten können ausgerüstet sein:**

- mit konventionellen magnetischen Vorschaltgeräten, standardgemäß der Klasse EEI=B2, die Klasse EEI=B1 auf Wunsch, die Leuchten sind nicht standardmäßig kompensiert
- mit elektronischen Vorschaltgeräten, standardgemäß der Klasse EEI=A2
- mit dimmbar elektronischen Vorschaltgeräten, die Klasse EEI=A1 (die Vorschaltgeräten können mit einem analogen, digitalen oder DALI-Signal gesteuert sein)

**Andere Komponenten:**

- Lichtquellen: lineare Leuchtstofflampen T5 (16 mm), T8 (26 mm) - es ist notwendig die Lichtquellen extra zu bestellen
- die Innenleiter mit einem festen Kupferkern mit einem Durchmesser von 0,5 mm<sup>2</sup> in einer PVC-Isolierung (Wärmewiderstand bis zu 90°C)
- eine schraubenfreie dreipolige oder fünfpolige Klemmleiste ermöglicht die Leiter in einen Durchmesser von max. 2,5 mm<sup>2</sup> anzuschließen
- Metaldurchführung PG 13,5
- es ist möglich die Leuchte auf Wunsch mit Noteinheiten mit einem unabhängigen Betrieb von 1 oder 3 Stunden auszurüsten (außer der Ausführung 18W)

### ZUBEHÖR

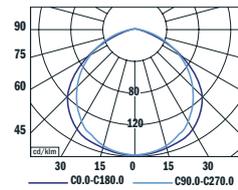

- Verbindungsstecker WIELAND mit Schutzart IP65
- Hängezubehör

## OPTICS

Rad jedno a dvoj-zdrojových, vodeodolných a prachotesných svetidiel s krytím IP65. Telo svetidla je skonštruované z nárazuodolného polykarbonátu. Svetidlá Tornado nachádzajú najvhodnejšie uplatnenie v prostrediach s prítomnosťou prachu, špiny, plynov, výparov, dymu, so zvýšenou vlhkosťou a rizikom korózie, okrem tých prostredí, v ktorých je problematické použitie plastových materiálov – treba vždy skontrolovať znášanosť polykarbonátu s daným prostredím.

Pre splnenie rozličných požiadaviek na osvetľovaciu sústavu je možné vybrať si z rôznych variantov svetidla Tornado – dostupné pre T5 alebo T8 lineárne žiarivky. Pre sústredené smerovanie svetelného toku smerom nadol je možné prevedenie s prídavnou hliníkovou odrazovou plochou nad žiarivkami.

Všetko elektrické príslušenstvo svetidla je montované na plechovú dosku pripnutú k telesu svetidla. Láhkosť prístupu dovnútra umožňuje skrátiť časy potrebné na údržbu svetidla a výmenu svetelných zdrojov na minimum. Polykarbonátový difúzor je UV stabilizovaný pre vysokú trvácnosť a zabezpečuje vynikajúcu distribúciu svetelného toku. Difúzor môže byť veľmi ľahko a rýchlo demontovateľný bez použitia ďalšieho špeciálneho nástroja pomocou rýchloupínacích klipsov. Polykarbonátová konštrukcia umožňuje dosiahnuť veľmi malú hmotnosť celého svetidla, čo významne uľahčuje manipuláciu so svetidlom pri montáži. Napriek tomu je stupeň ochrany voči vonkajším mechanickým nárazom IK09, čo robí z Tornado PC svetidlo odolné voči vandalizmu. Tornado pomocou úchytovej možnosti tiež závesnú montáž. Systém poskytuje možnosť priebežného prekáblovania pre montáž v rade. Dostupné aj v prevedení s núdzovou jednotkou. Ako lacnejšia varianta je možné vyhotovenie svetidla z materiálu ABS.

**Svetidlá pre osvetľovanie priestorov s možnosťou vzniku výbušnej atmosféry vytvorenej plynmi alebo parami (Tornado EEx)**

Uzatvorené svetidlo, ktoré pri normálnej prevádzke a stanovených abnormálnych podmienkach uvedených v norme zabezpečuje, že nie je schopné vznietiť okolitú výbušnú atmosféru. Musí byť prevádzkované takým spôsobom, aby maximálna povrchová teplota svetidla bola nižšia ako najnižšia teplota vznietenia danej výbušnej atmosféry. Svetidlo má na koncoch káblových vývodky utesnené prechodkami Pg 13,5 tak, aby bol zachovaný typ ochrany proti výbuchu.

### KLASIFIKÁCIA PRIESTOROV S NEBEZPEČENSTVOM VÝBUCHU

**Priestory s výskytom výbušnej atmosféry zloženej zo zmesi horľavých látok vo forme plynu, pary alebo hmly so vzduchom**

**Zóna 0** Priestor, v ktorom je nepretržite alebo počas dlhého času často prítomná výbušná atmosféra zložená zo zmesi horľavých látok vo forme plynu, pary alebo hmly so vzduchom.

**Zóna 1** Priestor, v ktorom je príležitostne za bežnej prevádzky pravdepodobný výskyt výbušnej atmosféry zloženej zo zmesi horľavých látok vo forme plynu, pary alebo hmly so vzduchom.

**Zóna 2** Priestor, v ktorom je za bežnej prevádzky nepravdepodobný výskyt výbušnej atmosféry zloženej zo zmesi horľavých látok vo forme plynu, pary alebo hmly so vzduchom, ale ak sa vyskytne, bude pretrvávajúť iba počas krátkej doby.

**Priestory s výskytom výbušnej atmosféry zloženej zo zmesi horľavého prachu so vzduchom**

**Zóna 20** Priestor, v ktorom je nepretržite alebo počas dlhého času často prítomná výbušná atmosféra vo forme oblaku horľavého prachu vo vzduchu

**Zóna 21** Priestor, v ktorom je príležitostne za bežnej prevádzky pravdepodobný výskyt výbušnej atmosféry vo forme oblaku horľavého prachu vo vzduchu.

**Zóna 22** Priestor, v ktorom je za bežnej prevádzky nepravdepodobný výskyt výbušnej atmosféry vo forme oblaku horľavého prachu vo vzduchu, ale ak sa vyskytne, bude pretrvávajúť iba počas krátkej doby.

### EEx nA II 3GD T4

**EEx** – elektrické zariadenie skonštruované a testované pre účel použitia v prostredí s prítomnosťou výbušného plynu alebo horľavého prachu

**A** – neiskriace zariadenie

**n** – typ ochrany elektrického zariadenia, ktoré pri normálnej prevádzke a stanovených abnormálnych podmienkach uvedených v EN 50021 zabezpečuje, že zariadenie nie je schopné vznietiť okolitú atmosféru

**II** – elektrické zariadenie pre priestory s nebezpečenstvom výbuchu iné ako bane s výskytom banského plynu

**3** – normálna úroveň ochrany, kategória 3

**G** – výbušnú atmosféru spôsobujú plyny, pary alebo hmla

**D** – výbušnú atmosféru spôsobuje prach

**T4** – teplotná trieda, maximálna povrchová teplota svetidla = 135°C

„n“ zariadenia môžu byť používané len v zónach klasifikovaných ako skupina II, t.j. priestoroch, kde nie je pravdepodobný vznik výbušnej atmosféry vytvorenej plynmi a prachovzdušnou zmesou. Vtedy, ak výbušná atmosféra vznikne, bude prítomná iba zriedka a iba v krátkom časovom období.

A range of single and twin lamp IP65 weather resistant and dustproof luminaires. Designed with an impact resistant polycarbonate body, Tornado luminaire is best suited for environmental situations where dust, dirt, gas, vapor, smoke, fumes, moisture, corrosive and wet conditions are present, except those with exhalations/atmospheres that limits the use of plastic materials – please ask for polycarbonate compatibility list.

To meet any requirements consequent the installation, it is possible to choose from wide range of Tornado variants – luminaires are suitable for T5 and T8 fluorescent lamps, available also with aluminium reflector for concentrated light distribution.

All of the control gear is mounted onto the gear-tray which is fitted to the body. Ease of access to the lamps ensures that installation and maintenance times are kept to a minimum.

Polycarbonate diffuser is UV stabilized for durability and provides superior light output. The diffuser can be quickly and easily removed and remounted during installation without the need for any specialized tools via the snap-lock clips. Polycarbonate construction results in a very lightweight fixture that can be easily held in place while being installed, even though degree of protection against external

mechanical impacts is IK09, which makes Tornado full vandal resistant. Tornado also has fasteners for pendant or chain suspension mounting. Whole luminaire offers quick and easy wiring and installation capabilities. Available also with emergency capability.

Cheaper version of Tornado made of ABS material is also possible.

### Luminaires for lighting of premises with presence of explosive powders or gases (Tornado EEx)

A luminaire which is completely enclosed and capable of withstanding an explosion of a specific gas or vapor that may occur within it and preventing the ignition of a specific gas or vapor surrounding the enclosure by sparks, flashes or explosion of the gas or vapor within. It must operate at such an external temperature that a surrounding flammable atmosphere will not be ignited. Luminaire is ended off by the sealing plug with bushing Pg 13,5, designed for the premises with danger of explosion.

### CLASSIFICATION OF PREMISES WITH RISK OF EXPLOSION

**Dangerous environment with presence of explosive gas**

**Zone 0** An area in which an explosive gas atmosphere is present continuously or for long periods

**Zone 1** An area in which an explosive gas atmosphere is likely to occur occasionally during normal operation

**Zone 2** An area in which an explosive gas atmosphere is likely to occur only rarely and then only for a short period

**Dangerous environment with presence of combustible powders**

**Zone 20** An area in which an explosive atmosphere due to a mixture of dust with air is present continuously, for long periods or frequently.

**Zone 21** An area in which an explosive atmosphere due to a mixture of dust with air is to be expected occasionally and for short periods.

**Zone 22** An area in which an explosive atmosphere due to whirled-up dust deposits is not to be expected. However, if such an atmosphere should occur, then in all probability only occasionally and for short periods.

### EEx nA II 3GD T4

**EEx** – electric construction built and tested for use in an atmosphere with presence of explosive gases or combustible powders

**A** – electric construction which does not produce sparks during normal operation

**n** – normal protection mode according to EN 50021

**II** – electric construction for premises with a potentially explosive atmosphere, other than mines with the presence of firedamp

**3** – category 3 fixture

**G** – protection against gas ignition

**D** – protection against powder ignition

**T4** – max. internal or external surface temperature = 135°C

„n“ fixtures can be used only in zones classified as 2, i.e. areas where the atmosphere is unlikely to be explosive due to the presence of gas during normal operation, or if this occurs, it may be present only infrequently and for short periods

Wetterfeste und staubdichte Leuchten in Einlampen- oder Zweilampenausführung, Schutzart IP 65. Schlagzäher Leuchtenkörper aus Polycarbonat. Die Tornado-Leuchten eignen sich für Bereiche, in deren Umgebung Stäube, Schmutz, Gase, Dämpfe, Rauch und Feuchtigkeit auftreten, ausgenommen Bereiche mit Atmosphären, die die Verwendbarkeit von Kunststoffmaterialien beschränken. Hierzu kann als Hilfe die Polycarbonat-Kompatibilitätsliste angefordert werden.

Um den unterschiedlichen Anforderungen gerecht zu werden, ist die Tornado in zahlreichen Ausführungen lieferbar, wie zum Beispiel für Leuchtstofflampen T5 und T8 sowie mit einem Aluminiumreflektor zur Verringerung der Ausstrahlungsbreite.

Alle Einbaukomponenten sind auf der am Leuchtenkörper angebrachten Geräteplatte angeordnet. Durch die gute Zugänglichkeit der Lampen werden die Installations- und Wartungszeiten auf ein Minimum verkürzt.

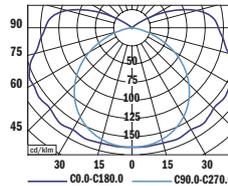

Die Abdeckwanne aus Polycarbonat ist zur Erhöhung der Haltbarkeit UV-stabilisiert und ermöglicht eine sehr hohe Lichtausbeute. Die mit Federbügeln versehene Wanne lässt sich ohne Spezialwerkzeug schnell und einfach entfernen und wieder anbringen. Aufgrund der Polycarbonat-Konstruktion hat die Leuchte ein sehr geringes Gewicht und lässt sich bei der Montage bequem positionieren. Zugleich bietet sie ausgezeichneten Schutz gegen mechanische Einwirkungen gemäß IK09, wodurch die Tornado zerstörungssicher ist. Die Leuchte besitzt weitere Vorrichtungen zur Pendel- oder Kettenmontage, und der elektrische Anschluss ist einfach. Nottlicht-Ausführung ist ebenfalls möglich.

Die Tornado ist auch in einer kostengünstigeren Variante aus ABS-Kunststoff erhältlich.

### Leuchte zur Beleuchtung von Bereichen, in denen explosionsfähige Stäube oder Gase vorkommen (Tornado EEx)

Vollkommen geschlossene Leuchte, die gegen eine Gas- oder Dampfexplosion in der Leuchte geschützt ist und die Entzündung von das Gehäuse umgebenden Gasen oder Dämpfen durch Funken oder Explosion eines in der Leuchte vorhandenen Gases oder Dampfes verhindert. Sie darf nur bei einer Umgebungstemperatur verwendet werden, bei der gewährleistet ist, dass sich eine entflammbare Umgebungsatmosphäre nicht entzündet. Die Leuchte ist mit einem für diese Anwendungen geeigneten Endverschlussstopfen mit Durchführung Pg 13.5 versehen.

### KLASSIFIKATION VON EXPLOSIONSGEFÄHRDNETEN BEREICHEN

#### Gefährliche Bereiche, in denen explosionsfähige Gase auftreten

- Zone 0** Bereiche, in denen gefährliche explosionsfähige Atmosphäre ständig oder langfristig vorhanden ist.
- Zone 1** Bereiche, in denen damit zu rechnen ist, dass gefährliche explosionsfähige Atmosphäre gelegentlich auftritt.
- Zone 2** Bereiche, in denen damit zu rechnen ist, dass gefährliche explosionsfähige Atmosphäre nur selten und dann auch nur kurzzeitig auftritt.

#### Gefährliche Bereiche, in denen brennbare Stäube auftreten

- Zone 20** Bereiche, in denen gefährliche explosionsfähige Atmosphäre langfristig oder häufig vorhanden ist.
- Zone 21** Bereiche, in denen gefährliche explosionsfähige Atmosphäre gelegentlich durch Aufwirbeln abgelagerten Staubes kurzzeitig auftritt.
- Zone 22** Bereiche, in denen gefährliche explosionsfähige Atmosphäre in Form einer Wolke aus in der Luft enthaltenem brennbarem Staub normalerweise nicht oder nur kurzzeitig auftritt.

### EEx nA II 3GD T4

- EEx** – Geprüftes elektrisches Betriebsmittel zur Verwendung in Atmosphären, in denen explosionsfähige Gase und brennbare Stäube vorkommen
- A** – Elektrisches Betriebsmittel, das bei normalem Betrieb Funkenbildung verhindert
- n** – Zündschutzart gemäß EN 50021
- II** – Elektrisches Betriebsmittel für andere als schlagwettergefährdete Bereiche mit einer möglicherweise explosionsfähigen Atmosphäre
- 3** – Leuchte Kategorie 3
- G** – Schutz gegen Gasentzündung
- D** – Schutz gegen Staubentzündung
- T4** – Maximale innere oder äußere Oberflächentemperatur = 135°C

Mit „n“ gekennzeichnete Leuchten dürfen nur in Bereichen der Zone 2 verwendet werden, also in Bereichen, in denen bei normalem Betrieb damit zu rechnen ist, dass gefährliche explosionsfähige Atmosphäre nur selten und dann auch nur kurzzeitig auftritt.

# TECHNICAL PART

## LDC (LIGHT DISTRIBUTION CURVE)

The LDC (Light Distribution Curve) represents the radiating properties of the particular luminaires. All luminaires which feature a light distribution curve have been measured on a measuring system.

An LDC describes the distribution of the luminosities (I, [cd]), how they are created spatially around a luminaire.

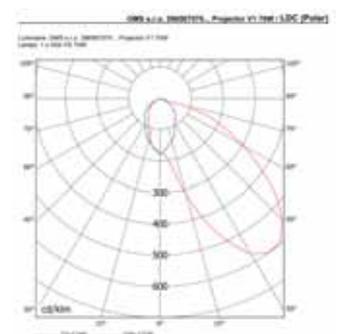

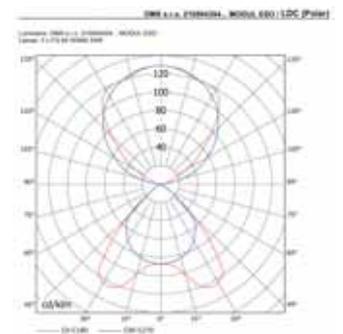

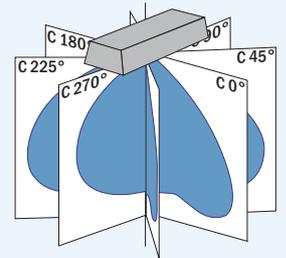

Customarily the room is divided around the luminaire into so-called C planes and the luminosities are measured in these C planes. The most prominent planes are the C0°-C180° plane, which stands vertically to the luminaire's longitudinal axis, and the C90°-C270° plane, which stand parallel to the luminaire's longitudinal axis.

When you see an LDC on the screen or on the printout, these two planes are represented in curve form – in the so-called polar co-ordinate system.

Most luminaires do not radiate their light uniformly in all directions. Which kind of light distribution the luminaire has, is influenced by reflectors and grids, the ensuing light can be very variable. If not otherwise stated, the luminosity values in the LDCs are related to a light flux of 1000 lumen.

Here you see two planes of a light distribution curve. The C0-C180 plane drawn with a red line and the C90-C270 plane drawn with a blue line.

In this case it is a axially symmetrical directly/indirectly radiating luminaire.

There are also asymmetrically radiating luminaires, which can feature a light distribution curve as in the following example:

## COLOUR RENDERING

Coloured objects require light that falls on them to contain components that will faithfully reproduce the correct colour. A degree of fidelity for colour reproduction is given by the colour rendering index (Ra), on a scale of 0-100. The higher the number means the better the reproduction of colour.

### Color rendition classes

The standard defines six color rendition classes, which can be matched with the general color rendering index as follows:

CLASSIFICATION	COLOR RENDITION CLASS	COLOR RENDERING INDEX RA
very good	1A	$Ra \geq 90$
	1B	$80 \leq Ra < 90$
good	2A	$70 \leq Ra < 80$
	2B	$60 \leq Ra < 70$
not so good	3	$40 \leq Ra < 60$
	4	$20 \leq Ra < 40$

Various levels of color rendition are prescribed in the standards, depending on the type of the interior and the activities involved. In general, color rendition Class 1A indicates the best possible quality of color rendition, as required for color testing and monitoring, for example, as well as in critical areas in hospitals and clinics. For office interiors Class 1B is normally adequate.

The decisive factor in the quality of the color rendition available from a lighting system is the choice of lamps. Thermal radiators such as incandescent lamps have very good color rendition characteristics, while fluorescent or discharge lamps come in a variety of quality classes.

COLOR RENDITION CLASS	VERY GOOD 1A	1B	GOOD 2A	2B	NOT SO GOOD 3	4
Color rendering index Ra	Ra ≥ 90	80 ≤ Ra < 90	70 ≤ Ra < 80	60 ≤ Ra < 70	40 ≤ Ra < 60	20 ≤ Ra < 40
Incandescent lamps	•	•				
Compact-fluorescent lamps	•	•				
Fluorescent lamps	•	•	•	•	•	
High-pressure mercury lamps				•	•	•
High-pressure sodium lamps					•	•
Metal halide lamps	•	•	•	•		

## ILLUMINANCE

Illuminance is a measure of luminous flux striking a given surface, i.e. it is the quotient of lumens and area. A luminous flux of 1000 lumens beamed uniformly on a surface measuring 5 square metres, for example, gives an illuminance of 200 lux.

The performance of the human eye is highly dependent on the level of illuminance within the field of vision. But general performance and motivation also improve with increasing illuminance, while the frequency of mistakes decreases.

In the individual case the level of illuminance required will depend on the tasks involved and the precision of visual performance required. Adequate illuminance at the workplace is dependent on the choice of luminaires and lamps, correct calculation of the number of luminaires required, and installation in an efficient configuration.

The required levels of illuminance are defined in the various national standards and guidelines.

Service illuminance is always quoted relative to the position of the plane to be illuminated. Horizontal illuminance, for example, is an expression of the level of illuminance on a horizontal work plane, while vertical illuminance relates to a vertical plane.

The following is a list of typical values for illuminance in our everyday lives:

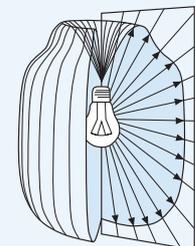

HORIZONTAL ILLUMINANCE OUTDOORS:	
TYPE	ILLUMINANCE [LX]
Sunny summer's day	60.000 to 100.000
Dull summer's day	up to 20.000
Dull winter's day	up to 3.000
Night with full moon	up to 0.25
Starlit sky	up to 0.01

TYPICAL ILLUMINANCE IN INTERIORS:	
TYPE	ILLUMINANCE [LX]
Office	300 to 1000
Industrial plant	100 to 500
Living room	100 to 300
Cellar	50 to 100

## LUMINOUS FLUX

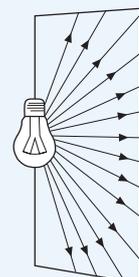

Luminous flux is a photometric measure of radiant flux, i.e. the volume of light emitted from a light source. Luminous flux is measured either for the interior as a whole or for a part of the interior (partial luminous flux for a solid angle). All other photometric parameters are derivatives of luminous flux. Luminous flux is measured in lumens (lm).

The ratio between luminous flux and the power consumed is known as luminous efficacy.

## LUMINOUS INTENSITY

Luminous intensity is an expression of the amount of light beamed in a certain direction within the interior. It is calculated as the ratio of luminous flux to the relevant element of solid angle. The luminous intensity of a lamp or luminaire is not equal in all directions. By plotting luminous intensity in the room (or in planes) around the lamp or luminaire, luminous intensity distribution can be defined. This offers a precise description of the photometric characteristics of the lamp or luminaire. Luminous intensity distribution is normally represented in the form of either a polar or linear diagram.

# TECHNICAL PART

## LIGHTING FOR COMPUTER WORKPLACES – LIMITATION OF THE DIRECT GLARE IN COMPLIANCE WITH EN 12 464, UGR

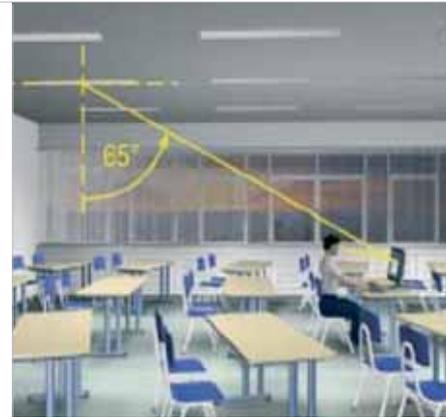

In order to have a uniform, worldwide system of glare assessment, the CIE (Commission International de l'Eclairage) developed the "Unified Glare Rating" System (UGR). In contrast to the Söllner process, which assesses the glare of individual lights, the UGR process can assess the glare for a specific lighting system.

The cause of glare can be traced back to excessive luminance differences in the field of vision. The field of vision is divided into the working area and the surrounding area. There are two kinds of glare: direct glare and reflective glare. Glare leads to poor work performance, high error frequency, and fatigue. Reflections onto screens, caused by lights, windows or other high luminance surfaces, reduce the readability of the screen and can create problems for workers.

The recommended luminance limits have been brought in line with EN 12464, to 1000 cd/m<sup>2</sup> or 200 cd/m<sup>2</sup> (see table). This can be increased up to 1500 cd/m<sup>2</sup> and 500 cd/m<sup>2</sup> respectively if positive polarity software only is used. The designer needs to select luminaires with the appropriate luminance limit based on the type(s) of screens likely to be used in the space.

In cases where the designer does not have information about the VDT's to be used, luminaires should be selected with a luminance limit of 200cd/m<sup>2</sup> at 65° elevation (old Cat 2), or 55° (old Cat 1) in special circumstances. The default luminance limit is for negative polarity software, and can be increased to 500cd/m<sup>2</sup> or 1500cd/m<sup>2</sup> for positive polarity.

For indirect lighting, the average luminance for surfaces lit directly should not exceed 500cd/m<sup>2</sup>, with the peak intensity not exceeding 1500cd/m<sup>2</sup>. Luminance should vary gradually across the surface.

SCREEN CLASSES IN ACCORDANCE WITH ISO 9241-7 SCREEN QUALITY	I GOOD	II MEDIUM	III POOR
Average luminance of luminaires that are reflected in the screen	≤1000cd/m <sup>2</sup>		≤200cd/m <sup>2</sup>

## MAINTENANCE FACTOR

If you perform your planning on the basis of the newest standard EN 12 464, you must specify the maintenance factor and list all the assumptions that lead to this value. A maintenance plan is required which must contain the interval for changing the light sources and for cleaning the luminaires and the room, and which must also specify the cleaning methods.

The maintenance factor is determined by the type of bulb and luminaire as well as the degree of dust and soiling in the room and also the maintenance method and the maintenance interval.

The maintenance factor is made up of:

- lamp lumen maintenance factor
- lamp service life factor
- luminaire maintenance factor
- room surface maintenance factor

## EULUMDAT

European standard data format for storing the spatial light output distribution for luminaires. A well structured text file format, which stores luminous intensity values in candela per total kilolumens installed in the luminaire. This allows for luminaires with several types of lamps installed next to each other. Eulumdat also offers a practical solution to luminaires that are available with different lamps to choose from. The file extension is \*.ldt.

## PROTECTION CLASS

The mechanical, thermal and safety requirements to be met by luminaires are laid down in the various international and European standards. The provisions of EN 60 598 (Luminaires - General requirements and tests) are of particular relevance. Conformance with this standard guarantees that a luminaire is designed and manufactured in such a way that it will not represent a hazard to life and limb, property or pets as long as it is properly installed, used and serviced. The provisions of the standard are designed to prevent :

- electric shocks when touched
- operating faults in the luminaires
- reduced service life for lamps and luminaires
- fire hazard in the luminaire or its surroundings

Conformance with the standard is indicated by the appropriate markings.

The protection class indicates to what extent the luminaire offers protection against electric shock (short circuit). The protection class may be indicated with Roman numerals or with the help of pictograms. The following classification is in use:

### CLASS I

Basic insulation and protective earthing for all exposed live parts  
Most luminaires are designed to be connected to a protective earth conductor (unless otherwise indicated).

### CLASS II

Basic insulation and additional protective insulation, no protective earthing.

### CLASS III

Operation on and with protective and extra-low voltages (max. 50V)  
e.g. spots for low-voltage trunking.

## IP PROTECTION

The type of protection of a luminaire defines the degree of protection against the ingress of damp, water and dust. The type of protection is expressed as a two-digit IP code. The first digit relates to protection against the ingress of foreign bodies, while the second defines the level of protection against moisture. Every extra-protection luminaire must be marked with both digits of the IP code. Ordinary luminaires (= IP20) do not have to carry the code markings.

1st digit: protection against contact and foreign bodies

DEFINITION	EXAMPLES(CONTACT/INGRES NOT POSSIBLE FOR...)	CODE	
No protection Protection against foreign bodies > 50 mm	no special protection large body surfaces, e.g. a hand (no protection against deliberate contact)	IP 0X IP 1X	
Protection against foreign bodies > 12 mm	fingers	IP 2X	
Protection against foreign bodies > 2,5 mm	tools, rods	IP 3X	
Protection against foreign bodies > 1 mm	wires or strip	IP 4X	
Protection against dust	not completely dust-proof, but adequate for proper operation	IP 5X	
Dust-tight	no ingress of dust	IP 6X	

# TECHNICAL PART

2nd digit: protection against ingress of liquid

DEFINITION	EXAMPLES(CONTACT/INGRES NOT POSSIBLE FOR...)	CODE
No protection	no special protection	IP X0
Drip-proof	dripping water (vertical drops)	IP X1
Drip-proof up to 15°	vertical drops with the housing rotated up to 15° from the normal position	IP X2
Spray-proof	water spray from an angle of up to 60° from the vertical	IP X3
Protection against splashwater	splashwater hitting the housing from any direction	IP X4
Jet-proof	a jet of water hitting the housing from any direction	IP X5
Protection against high seas	high seas or a jet of water under high pressure	IP X6
Protection against immersion	ingress of water caused by temporary immersion	IP X7
Protection against submersion	continuous submersion (precise details to be supplied by the manufacturer)	IP X8
		- - m

## INDUCTIVE BALLASTS

### OPERATION OF FLUORESCENT LAMPS

The ballast consists of a linear inductor connected in series with the lamp. In parallel to this conductor is connected a starter, which has the function to allow the circulation of preheating current in the lamp cathodes and to supply the correct ignition voltage. The starter can be incorporated in the socket of the fluorescent lamp. This circuit can be used only when mains voltage is nearly the double of lamp voltage. If lamp voltage is particularly low in comparison to mains voltage, two lamps can be connected in series to the same ballast – typical example is 2x18W connection. Since the ballast is an inductive load the circuit has a power factor of about 0.4–0.6.

### OPERATION OF DISCHARGE LAMPS

To start the gas discharge the gas contained in the burner of the lamp must first be ionised in order to facilitate a flow of current. For high-pressure sodium vapour lamps (HS) and metal halide lamps (HI) the necessary high voltage is generated by an igniter. Ordinary high-pressure mercury vapour lamps (HM) ignite without the aid of an igniter as soon as they are connected to the mains voltage.

Once it is ignited the ionised gas possesses an extremely high level of electrical conductivity, so for operation the current flow has to be restricted. The current is usually restricted by the impedance of an inductive ballast. This is connected in series to the lamp and has to be adapted to suit the properties of the lamp and the mains supply because in general high-pressure lamps are susceptible to current fluctuations. Deviations from the nominal value of the current can lead to a reduction in the service life of a lamp and changes in its colour rendering.

As the reference values for lamp current, voltage, and ballast impedance given by the manufacturers for high-pressure sodium vapour (HS) and for metal halide lamps (HI) tend to be identical for any given lamp power, the same ballasts can usually be used for both types of lamp. The colour from HI lamps can change if the impedance varies from the nominal value.

### TEMPERATURE SWITCH

The so-called rectifier effect can occur when discharge lamps reach the end of their service life. This is an asymmetric charge flow in the burner chamber of the lamp resulting from different electron emissions at the electrodes. The proportion of rectified current within the total lamp current that occurs in this way is not restricted by the series connected inductivity. The result is an increase in current flow that lead to an unacceptable temperature rise in the ballasts, igniters, lampholders and leads thus resulting in a destruction of the luminaire. The rectifier effect is especially

known for high-pressure sodium vapour and metal halide lamps. Because this can also cause unacceptable high temperatures at other parts of a luminaire such as lamp-holders and wiring, European version of the luminaire standard EN 60598-1 has been extended to include relevant testings. The new regulations have been in force within Europe since 1st September 2002. Inductive ballasts with integral temperature cut-off can be used as an effective protection against excessive thermal loads on luminaire components, they automatically switch off the power supply to the lamp when a certain threshold temperature is reached.

As before, OMS continues to offer magnetic ballasts with a conventional temperature switch that disables the current flow, when the specified limit temperature of the winding has been achieved.

## POWER FACTOR

All discharge lamps, such as fluorescent lamps, high pressure mercury vapour lamps, sodium lamps, metal halide lamps, etc., require ballasts (chokes) or transformers for their operation. These devices are inductive in nature. When a discharge lamp is switched on, it draws apparent power from the mains. This apparent power (VA) has two components; one is the active power (W) actually being consumed by the lamp for illuminating it, and the other is the reactive power (VAR) feeding the electromagnetic circuit of the control gear.

Power factor is the ratio of Active Power (W) to the Apparent Power (VA) (Figure 1).

$$\text{Power factor} = \frac{\text{Active Power}}{\text{Apparent Power}} \text{ or } \frac{W}{VA}$$

Power factor is also denoted as  $\cos \phi$ . Typical power factor of ballasts is from 0.35 to 0.5.

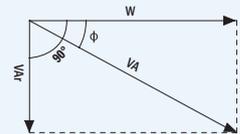

Figure 1

## CAPACITOR

Compensating capacitors are designed for individual correction of the power factor of transformers and magnetic ballasts in discharge lamps (e.g. fluorescent lamps, metal - halid vapour lamps, high-pressure mercury vapour lamps, sodium lamps) in mains with a frequency of 50 or 60Hz. This allows for an improvement of the luminaire's power factor to  $\cos \geq 0.9$ .

### Important remarks on the safety of Type A capacitors

Type A capacitors do not have a specific failsafe device as specified in the applicable standards for type B capacitors. In the event of failure or overload the winding element may overheat and melt, smoke and even ignite; melted material may drip from the capacitor as well. It is therefore necessary to undertake constructional measures on the electrical device to provide reliable safety for people and property when using type A capacitors. The recommendations of the German Association of the Electrical Industry (ZVEI) for the use of type A lighting capacitors say: "Type A capacitors may be used in luminaires only where the capacitor is allocated in uncritical environment (non-inflammable materials)". Only capacitors with break-action mechanism are suitable for use in sensitive environment. In case of doubt regarding the character of the ambient conditions, OMS luminaires should be used with capacitors with break-action mechanism.

## ELECTRONIC BALLASTS

Electronic ballasts are used to run fluorescent lamps at high frequencies (approx. 35 - 40 kHz). This has a number of advantages compared with conventional operation using magnetic ballasts at 50 Hz mains frequency:

### High frequency operation

With high -frequency operation the lamp remains continuously lit and provides flicker-free light, which is a significant improvement in terms of visual comfort. Luminous ripple also occurs at high frequency, which greatly reduces the risks involved in working with rotating machinery (stroboscopic effect). With high-frequency operation, power consumption at the lamp for the same light output is approx. 7 - 11% lower than with conventional operation (higher system efficiency).

### Compensation and ignition

Electronic ballasts incorporate compensation and ignition gear (power factor approx. 0.95), which ensures a gentle lamp start without irritating flicker. The drop in luminous flux is reduced and lamp life is increased by up to 30-50%. At the end of lamp life the electronic ballast switches the system off after 1 - 3 min., and thus puts a stop to the wasteful and annoying attempts at re-ignition. All together electronic ballasts offer up to 30% energy savings compared with conventional ballasts.

### Lighting management and control

Electronic ballasts can be dimmed, or be controlled by wide variety of lighting controls available on the market.

### Service life

With electronic ballasts, service life is much longer than lamp life. In principle all fluorescent lamps can be operated with an electronic ballast.

### Metal halide lamps

Metal - halide lamp can also be run with electronic ballasts. The advantages are similar to those relating to fluorescent lamps. In addition a consistent color appearance can be maintained in spite of fluctuations in the mains voltage.

# TECHNICAL PART

## ENERGY EFFICIENCY REQUIREMENTS FOR BALLASTS FOR FLUORESCENT LIGHTING

The governments that participated in the climate conferences of Rio, Kyoto, The Hague and Bonn aim to reduce emissions of carbon dioxide (CO<sub>2</sub>) as one of the so-called greenhouse gases. CO<sub>2</sub> is a waste product created during production of electrical power. Lighting is estimated to account for around 15% of the electricity consumed in the industrialised world.

A significant amount of electricity consumption in the EU is accounted for by fluorescent lighting. Fluorescent lighting has very different levels of consumption for a given type of lamp, i.e. it differs widely in terms of energy efficiency.

The Directive 2000/55/EC (OJEC L297 - 1 November 2000) aims at reducing the energy consumption of ballasts for fluorescent lighting by moving gradually away from the less efficient ballasts and towards more efficient ones.

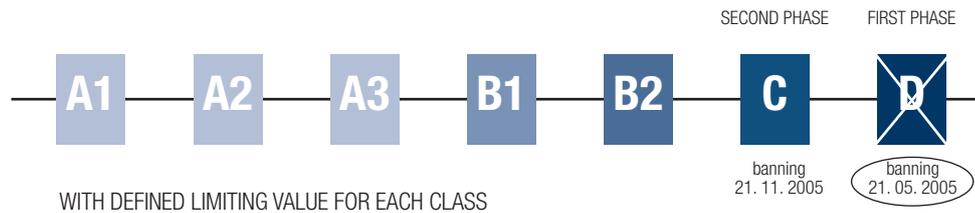

The ballast, however, is only one part of the energy consumption equation. The degree of energy efficiency of fluorescent lighting circuits depends upon the combination of ballast and lamp. As a consequence CELMA has found it necessary to develop a ballast classification system based on this combination.

Luminaire manufacturers now have the possibility to choose the right ballast for the application. The corrected total input power of the lamp-ballast circuit is defined as the „Energy Efficiency Index“ (EEI) of the ballast-lamp combination. The classes are A1, A2, A3, B1, B2, C and D.

### According to the CELMA classification scheme the following classes and typical ballast types exist:

- class D: magnetic ballasts with very high losses
- class C: magnetic ballasts with moderate losses
- class B2: magnetic ballasts with low losses
- class B1: magnetic ballasts with very low losses
- class A3: electronic ballasts
- class A2: electronic ballasts with reduced losses
- class A1: dimable electronic ballasts

### CLASSIFICATION OF BALLAST-LAMP CIRCUIT FOR ENERGY EFFICIENCY IN LIGHTING

## LAMPS AND DIMMED OPERATION

For lighting systems with dimmable electronic ballasts, OMS recommends to replace fluorescent lamps as a full complement to guarantee uniform lighting levels and to prevent differing colour impressions. In addition to this, new lamps should be burnt at maximum brightness for approx. 100 hours. A two-lamp dimmable electronic ballast should only be operated with lamps of a single lamp manufacturer.

## LAMP SERVICE PERIOD

Present day discharge lamps and fluorescent lamps will survive for many thousands of hours, but during that time the light output steadily depreciates, so that if lamps were operated until electrical failure, the light output could be half or less of what it was initially. In practice, discharge lamps and fluorescent lamps should be group changed at the most economic time.

Recent developments in lamp and phosphor design have yielded greater lives, together with superior lumen maintenance.

In all but the smallest installations it is sensible to replace discharge lamps and fluorescent lamps as a group at planned intervals. The advantages of planned replacement are as follows:

1. Labour costs can be reduced by phasing the replacement cycle to fit the cleaning cycle.
2. When there would be an interruption to a production process, replacement can be planned for a non-production period.
3. Lamps will be of matching output and colour initially and over the service period, and will be of the latest technology.
4. Replacing lamps before electrical wear-out reduces the possibility of failure of control gear.
5. For design to economic planned maintenance, fewer lighting points may be required.

For many installations the most economic time for group replacement is when the light output of the lamps has fallen below 80% of the initial value and the lamp failures are becoming significant in the loss of average illuminance. The latest time for group replacement is when the designed „maintained illuminance“ has been reached.

If „spot“ replacement of individual lamps is used instead of planned bulk replacement, then it is likely that lumen depreciation, except from lamps with good lumen maintenance, may result in low installation efficacy and unacceptable lighting levels.

## FOUR STEPS TO SAVE ENERGY

### CONVERSION TO ELECTRONIC CONTROL GEAR (ECG) - SAVING 25% IN ELECTRICITY

Not only do lamps consume energy, but so does the control gear operating them. In technical terms, this is called power loss. If we convert a luminaire from magnetic ballasts to one with electronic control gear, energy savings are twofold:

1. Fluorescent lamps operated by ECGs consume approximately 14% less electricity while maintaining the same light output as conventional control gear.
2. ECG power losses are significantly lower than those of CCGs.

**Example:** A luminaire with two 36W T8 fluorescent lamps and CCGs consumes 95W:

$$2 \times 36 \text{ W (lamp)} + 2 \times 11,5 \text{ W (CCG)} = 95 \text{ W}$$

The same luminaire with the same lamps, equipped with a two-lamp ECG consumes only 70W:

$$2 \times 32 \text{ W (lamp)} + 1 \times 6 \text{ W (ECG)} = 70 \text{ W}$$

The 25W of savings are equivalent to more than 25%.

### ELECTRONIC BALLASTS AND DIMMING

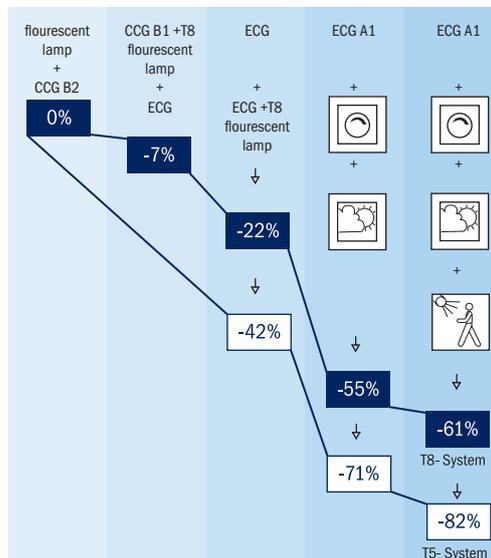

More and more, users want to control their own lighting either because there is enough daylight in the room, or because certain tasks, such as working with VDUs, require lower lighting levels. By using dimmable electronic control gear, lighting levels can be customized for individuals or larger work areas. This function can be carried out manually or through infrared controls or programming. Energy savings of an additional 10% are attainable.

### ELECTRONIC BALLASTS AND DAYLIGHT CONTROL

Dimmable ECGs create new possibilities for saving energy. All that is required is the installation of additional components, such as daylight sensors (photocells) to detect the amount of daylight. Installed correctly in a space, daylight and artificial light can combine together to achieve a constant level of illumination. In the morning when the sun rises, artificial lighting is dimmed automatically. As sunset approaches, artificial illumination increases with only subtle changes occurring. Daylight control is particularly viable for rooms or areas containing a great deal of daylight. Additional energy savings of 30% can be easily achieved.

### DAYLIGHT CONTROL AND OCCUPANCY SENSORS

Most office buildings control their lighting by centrally switching it on and off. As a result, many unoccupied rooms are lit. The last step on our energy saving tour offers a solution for this problem – using occupancy sensors to achieve required light levels. If no motion is detected in a room during a certain period of time as determined by a user, the lighting will be turned off. If a person enters the unlit room, lighting is automatically turned on. The result is an additional 5 to 10% in energy savings.

# LIGHTING CONTROL

## ANALOG CONTROL

Modern dimmable electronic control gears with 1...10V interfaces in combination with the appropriate controllers and sensors provide the basis for simple and cost-effective systems. The system either regulates the voltage or resistance in the control circuit.

Apart from the phase, neutral and protective conductors, two other control circuit wires are connected to the luminaire. The length of the control conductor can affect the control result.

The control power is generated by the ECG and in the simplest form a potentiometer is enough for control. Otherwise control is via an interference-proof dc voltage signal of 10V (maximum brightness; control line open) to 1V (minimum brightness; control line short-circuited). The voltage on the control line is isolated from the power cable but is not at safety extra-low voltage (SELV). All the control lines of an ECG installation must be connected with the correct polarity (+/-), otherwise the lamp will operate at minimum brightness. Regulation does not work correctly if the polarity is crossed on any of the luminaires in a group.

Dimmable ECGs are only dimmed via the 1...10V interface; they are switched on and off via the power line, so the phase conductor should also be connected via the control unit. ECGs connected to different phases can be dimmed via the same controller.

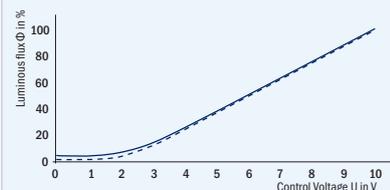

It's always necessary to check the maximum load capacity of the controller (switching output and 1...10V output). Even if the potentiometer is capable of regulating up to 50 HF-ballasts, the capacity of the switch is usually 5-10 luminaires depending on their load. Contactors are needed for greater loads.

## Technical data for manual control units DIM MCU

Reference: DIM MCU P

- Electronic potentiometer for 1...10V
- For 1 control point
- Integrated switching contact
- With rotary button and cover
- Effects of incorrect wiring:
  - 230V at control terminal: Fuse defective or total failure
  - Reversing +/-: always minimum luminous flux
- Load capacity of the signal output: Maximum of 40 mA or a maximum of 50 dimmable ECG or 16 signal amplifiers DIM SA
- Load capacity of switching contact: 250 V/6 A (10 single-lamp or 5 two-lamp dimmable ECGs)

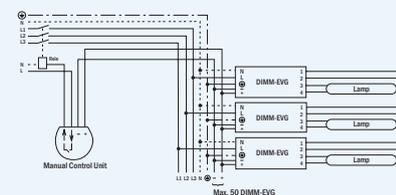

**Note:** Control with a combination of two or more manual control units is not possible.

Graph luminous flux / control voltage

Manual potentiometer DIM MCU P

Wiring scheme analogue control

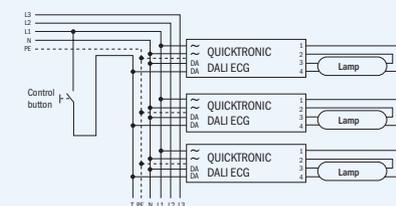

## DIMMING WITH MAINS VOLTAGE

Dimmable ballast normally controlled with DSI, DALI or 1-10V controllers, are also possible to dim and switch on/off directly with mains voltage at the control terminals. It is very simply and economic version of light control.

Only a four core cable to the luminaire is needed. To use this function all that is needed is appropriate wiring of the ECGs. Connecting live and neutral to the control terminals D1 and D2 via a push to make switch (momentary switch) offers the possibility to control the dimming level and the on/off function without any digital devices. With a short push, the luminaire is switched on and off. If you push and hold the button, it is possible to dim the lamp throughout the full dimming range of the ballasts (1 or 3% up to 100%). This connection allows to use unlimited number of push to make switches (momentary switches), so it is ideal for controlling of lighting system from several places in the room. Maximum length of the control wires is unlimited due to 230/240V potential.

The control method can, depending on the brand, be combined with other components such as daylight sensors. The preset lighting level is set using the momentary switch, to the required value. The sensor will then attempt to keep the level constant around the new level.

Maximum numbers of ballast is theoretically unlimited because no power or load is being controlled but due to the possibility of asynchronous function, it is recommend the number of ballasts connected to the switch does not exceed

25 pieces. In the case of a new installation or new ballast installed into an existing installation it is possible that not all ballasts will be synchronous. With a push on the switch longer than 10 seconds all ballasts will synchronise at a 50% light level and have the same point of departure for dimming.

## DIGITAL CONTROL – DALI SIGNAL

Nowadays, light is one of the comfort features of a room and part of an energysaving concept in facility management. The most important thing is to create lighting situations (lighting scenes) that can be stored and recalled, possibly with integrated presence and daylightdependent control. The system must also be very easy to operate and also enable feedback messages to be sent to a building management system. The lighting industry has therefore developed a new digital communication standard for lighting applications. It is called DALI, short for Digital Addressable Lighting Interface. Main advantages of DALI technology:

- In five-wire mains cables, the two wires not needed for power supply can be used for the DALI interface, with no need to worry about the polarity.
- Duplex digital signal is transferred between all units in the system – between ballasts, control panels, sensors and programming units.
- Every ECG in the DALI system can be addressed individually in digital format and therefore interference-free. Maximum 64 addresses/system.
- Every ECG in the DALI system can belong to more than one group at the same time, can store the lighting levels for different lighting scenes and even be switched on and off digitally without the need for relays. Up to 16 groups of luminaires and 16 different light scenes can be created in each system.
- The control signal is transferred in the same way to all luminaires independent of the control conductors' length. Maximum cable length for the control circuit is 300 m.
- Dimming characteristic of ballasts works according logarithmic regulation curve, in which case the human eye observes that the light changes in a linear fashion.
- Status and any error indications from components in the system can be reported by connected software.
- Users can easily program whole system through wall panels, remote controllers or, especially by large lighting installations – with computer software.
- The switches can be connected in parallel so the system can be controlled from different locations.
- All system settings are retained even if there is a lengthy power outage.
- Integration in existing 1-10V or DSI systems is possible, thanks to DALI to 1-10V, or DALI to DSI converters. This solution increases the number of luminaires that can be controlled in a DALI installation (group of 1-10V/DSI controlled luminaires is dedicated to single DALI adress).

## DALI EASY – THE EASIEST WAY OF LIGHTING CONTROL

EASY Color Control is excellent for RGB applications with coloured fluorescent lamps because the DALI electronic ballasts can be connected directly to the DALI EASY II control module without the need for addressing. The DALI EASY lighting controller has four channels. Up to four lighting scenes can be stored and retrieved. All the settings are made from an infra-red remote control. An external switch can also be used to switch all the luminaires on and off and to fade them up and down. With DALI EASY it is possible to set up a coloured light mixing system in which a different lamp colour (red, green, blue and white) is assigned to each group. By setting the individual groups to different values, any colours can be “mixed”. These colours can be stored as lighting scenes and retrieved at any time.

A single control unit permits control of 32 DALI control gear units. If 32 ECG units are not enough for a lighting task, EASY Color Control can be expanded to as many as 16 control units, via a master-slave connection. With 64 DALI channels and up to 512 control gear units, even luminous ceilings with daylight simulation or dynamic facade illumination can be realised in this way.

DALI EASY has three operating modes:

### Lighting control mode

The lighting levels and the lighting scenes are adjusted manually. In lighting control mode up to four static lighting scenes can be stored and retrieved.

### Sequencer mode

In sequencer mode the lighting scenes stored by the user are called up automatically one after the other. With fade times of 0,1 s to 99 minutes it is possible to create a wide range of effects with the integrated sequencer from stunning rapid colour changes to gentle relaxing variations. If DALI EASY is used as a colour mixing system, automatic colour changes are generated.

### Daylight simulation

This is a special operating mode in which it is possible to simulate the natural changes in daylight over a time span of up to 24 hours. Daylight simulation operates in much the same way as the sequencer mode. The difference is in the use of lighting scenes that correspond to the lighting conditions as they change during the course of a day. The duration of the entire cycle (in other words a simulated day) and the predefined lighting scenes can be changed.

If the control units are connected to the USB port of a personal computer via an adapter cable, it is particularly easy to create,

# LIGHTING CONTROL

save and duplicate scenes and sequences via a graphic software interface. Colours can be set, copied and varied by mouse click. All settings are then automatically adopted by the control units.

The simple DALI easy lighting control system offers interesting options for luminaires with changeable colour temperatures, for daylight simulation and for comfortable lighting in offices and conference rooms. DALI Easy is an attractive alternative to far more complex products.

## MODULAR PANELS – COMFORTABLE CONTROL OF LIGHTING SCENES

Panels are available in 2, 5, 7 and 8 button types.

Rubber key mat technology has been used for the buttons, resulting in excellent tactile feedback. Each button is individually back-lit highlighting the current selection and providing ease of access in darkened areas.

By using DALI's message addressing scheme, button panels can work individually or together to control lamps in either the entire network, in groups or individual units. Every control panel in the DIGIDIM range features an IR receiver for use with the remote control. This too is truly versatile providing immediate access to direct level adjustment, scene storing and recall.

There are many advanced features that can be easily programmed by using the DIGIDIM toolbox software. For instance each and every push button can be reconfigured to send any DALI command; this provides the power and flexibility to meet the most challenging of designs. All control panels can also be locked to avoid modification of stored scenes or even temporarily disabled.

The Remote Control is fitted with seven buttons which can be used directly to control basic system functions such as on/off, raising and lowering of the general light level, and selecting from four pre-programmed scenes. The same buttons can be used in combination to provide basic programming functions. These include creating and adding to groups and setting pre-set light levels or scenes. The remote control unit provides a very good first line programming tool for simple systems.

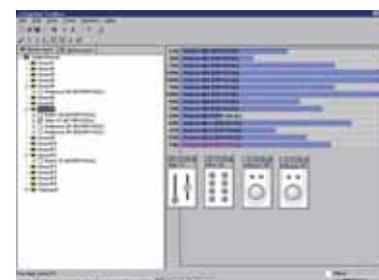

## SOFTWARE – POWERFUL TOOL FOR PROGRAMMING OF LIGHTING SYSTEMS

The DALI-system needs to be programmed and larger systems are ideally programmed using a computer. The DIGIDIM Toolbox is a Microsoft® Windows based application that provides a simple method of configuring of DALI systems. To use the software as a configuration tool, the computer must be connected to the system via the special adapter cable that is provided with the full version of the software.

Based on the familiar look and feel of Windows Explorer, the graphical user interface is intuitive and simple to learn. Scenes are a collection of different light level settings for a number of lamps, which can be recalled at any moment. The Toolbox provides an intuitive method of setting and viewing light levels; it makes the storing of scenes simple, be it for an individual lamp, group of lamps or the entire network.

By using the DIGIDIM Toolbox any button on any DIGIDIM panel can be reconfigured to send a different DALI command. DIGIDIM Toolbox can be used as an online programmer, connected directly to the network. In this instance any change becomes effective immediately. The off-line mode allows DIGIDIM systems to be simulated and configured in advance, away from the installation, by using virtual devices. Once the simulation is complete and the site has been wired the DIGIDIM toolbox guides the user through a simple step-by-step process to transfer the design to the finished installation.

## TOUCHSCREEN

The x-touchPANEL enables task-specific lighting moods and automatic lighting mood sequences to be programmed in all DALI lighting control systems. This plug & play solution offers intelligence in a box – and it's very easy to install. Anyone can define and call up new scenes at minimum cost and with minimum fuss. x-touchPANEL combines simple configuration of lighting moods with simple operation. The control units with integrated sequencers are ideal for lighting systems in which dynamic light, changes of scene or defined sequences are required.

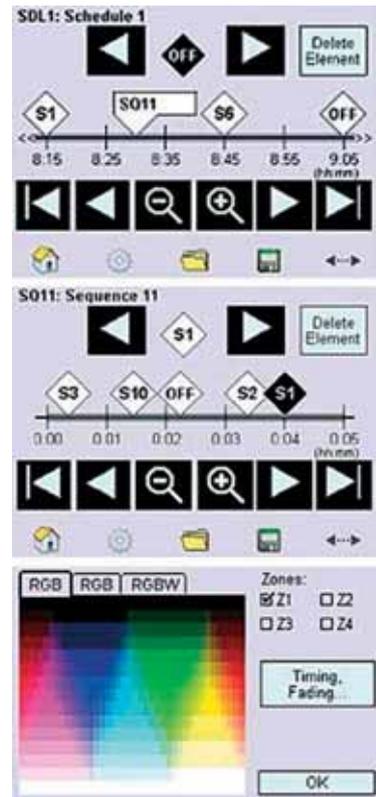

There are two software versions stored in the x-touchPANEL. Users can then choose their favourite. One program focuses on mood lighting with white light and scene selections. The other is designed specifically for time-controlled colour changes and colour sequencing via RGB colour mixing. The special feature is the ease with which colours can be selected. The shade is chosen by touch from a palette of colours and the controller then automatically calculates the light levels for the individual coloured light sources.

The new x-touchBOX has an internal real-time clock which makes setting up scenes and sequences really easy. Up to 128 DALI units can be controlled and 16 lighting groups can be assigned. The brightness values are stored in the control gear, transformers and converters. 99 independent light sequences can be programmed with the x-touchBOX, each capable of calling up to 16 lighting scenes any number of times. The sequences can be called up either manually or under calendar control (schedule).

The "virtual" buttons are not predefined or labelled. Instead, the functions and designations can be configured for the specific application, and reassigned very easily at any time. Twelve different languages are supported.

Touch panel is also a decorative design element - it has extremely low-profile casing and aluminium-framed 5.7 inch colour display. The overall look is further enhanced by a concealed garland of LEDs with RGB colour mixing capability so that the unit can either provide an eyecatching contrast to the wall or blend in with its surroundings.

The x-touchPANEL will add a touch of class to shops, offices, conference rooms, hotels, restaurants and luxury homes.

## SENSORS

Automatic controllers with sensors are ideal for saving of lighting costs. A light sensor measures the brightness in the room and controls it with the appropriate dimmable electronic control gear so that a predefined lighting level is maintained at all times. This means that not only can energy be saved on sunny days but full use can be made of the available daylight on overcast days.

Users can adjust the lighting at any time to a level that meets their specific needs. Energy savings of up to 60% are possible. Potential savings of up to 70% and more can be achieved by using sensors with automatic disconnection, motion detectors and time switches.

# LIGHTING CONTROL

## DIM PICO

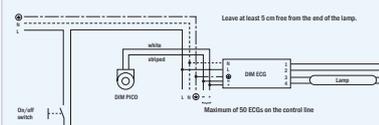

DIM PICO is a simple light sensor for dimmable ECGs with a 1...10 V interface for installation in a single luminaire or for applications in individual offices.

This mini light sensor has a light control function that reduces the amount of artificial light by approximately 50% measured against the increase in daylight. DIM PICO is most suitable for single luminaires or individual offices. The light sensor should be mounted on the lamp with a T8 clip or a T5 clip.

### Technical data for DIM PICO

- 1...10V mini light sensor for single luminaires in single and open-plan offices
- Up to 50% energy savings
- Simple clip-on fitting for T8 and T5 lamps
- Direct connection to the 1...10V interface
- Compensates for 50% of the incoming daylight
- Easy to adjust by turning the casing
- Load capacity of the signal output: max. 6 mA (maximum of 10 dimmable ECGs)
- Cable length 700 mm
- Measurement angle 50°

Two plastic clips (for T8 and T5 lamps) are included.

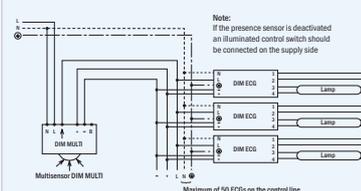

## DIM MULTI

Multisensor DIM MULTI is designed for lighting control at workplaces or in rooms. It maintains the light at a constant level. If sufficient daylight is available the lighting system is switched off. It has an integrated motion detector so that the lighting is only switched on if there is at least one person in the room. This is the most efficient form of lighting control and achieves energy savings of 70% and more.

### Technical data for multisensor DIM MULTI

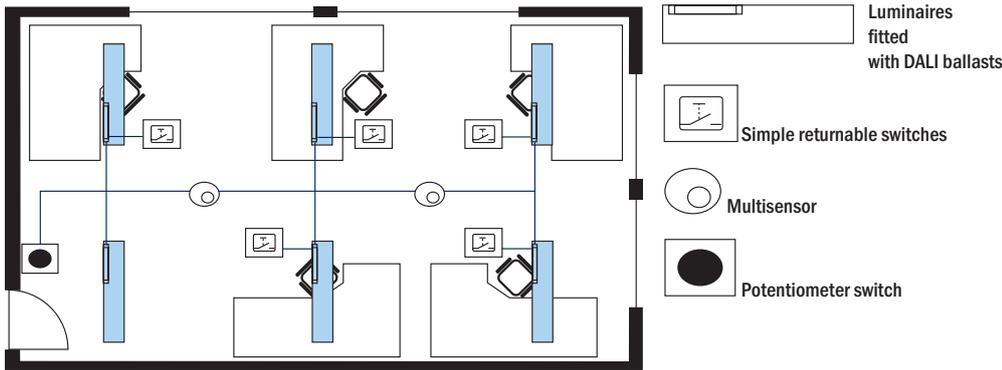

- 1...10V sensor for daylight-dependent control with automatic shutdown at adequate daylight
- Integrated motion sensor (can be disabled)
- Energy savings: up to 70%
- Compensates for 100% of the incoming daylight
- Easy to adjust with three trimmers on the sensor
- Power input: approx. 1W
- Adjustable light value: Approx. 50-800 lux (directly on the unit)
- Detection angle of the light sensor: approx. 100°
- Monitoring range of the motion sensor: Approx. 7m diameter at a height of 3 m
- Supply and load connections: L, N, switched L
- Load capacity of the signal output: 50 mA (approx. 50 dimmable units)
- Load capacity of switching contact: 5 A ohmic load or 20 1-lamp ECGs or 10 2-lamp ECGs
- Switch-off delay range: 5-30 minutes
- Maximum cable length: 100 m (control lines 0.5mm<sup>2</sup>, load and supply lines 1.5mm<sup>2</sup>)
- Design: Plastic housing for installation on ceilings or in louvre luminaires

## MULTI-SENSOR

The DIGIDIM multi-sensor module is a compact DALI unit containing the sensors required to provide the energy saving benefits of an automated lighting control system. It contains a constant light sensor, a PIR presence detector and an infrared receiver that allows the multi-sensor to be operated by the DIGIDIM hand held remote control. The PIR and constant light sensors allow the system to detect when a room is occupied and to measure the levels of light available.

The IR receiver operates in conjunction with the DIGIDIM IR hand held remote control to select desired light levels and to carry out basic system programming functions. The multi-sensor can be installed in the ceiling or within a luminaire. It can also be fitted with a local wall switch, which will provide a manual dimming function if required.

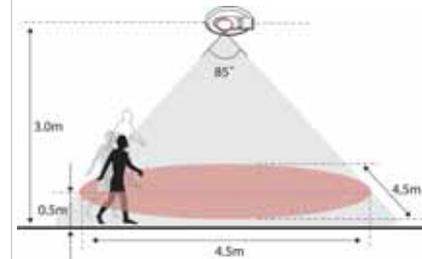

Open plan office – central control from one or more locations in the area. Advanced control and energy saving features are achieved by constant light functionality, presence detection and remote control provided by the multi-sensor(s). Independent individual control for each luminaire increases user comfort.

**Technical data for Multisensor**

- Programmable constant light control for maximum energy efficiency range 50 to 5000 lx detect. angle 100o (40o with restrictor)
- Complete control using the hand held remote
- Manual switch settings can be overridden by DIGIDIM Toolbox software to eliminate the need for acces to multi-sensor after installation
- Most multi-sensor functions are programmable using the hand held remote, but full system acces is available by using the DIGIDIM Toolbox software
- If multiple linked PIR sensors are connected in one system, they will communicate with each other and only switch off the loads when all are non-detecting

Multi-sensor

PIR detection range

**ACTILUME – EASY LIGHTING CONTROL**

The Philips ActiLume lighting control system consists of a small, lightweight sensor and controller. ActiLume is a true Plug and Play solution designed for all office applications, from open plan to cell offices, lobbies or toilets, and from corridor to small meeting rooms. It is used in a master and slave luminaire concept, easy to use and easy to install.

It has three sensors:

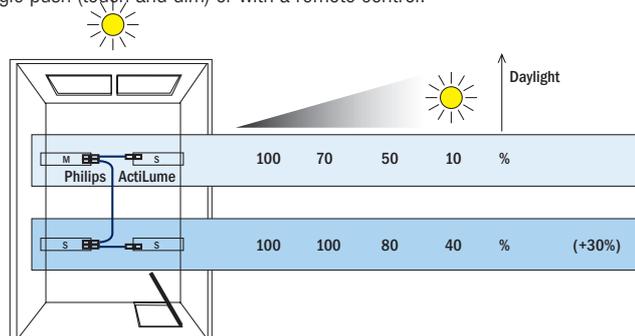

- a light sensor for daylight depending regulation - the light sensor is sensitive for visible radiation (matching the human eye) providing automatic savings with daylight depending regulation, without any visible discomfort for the user
- a movement detector for occupancy control - the movement detector is very sensitive to human movements and is combined with extended delays to provide optimal functionality in an office environment
- an IR receiver for remote control - in this way the settings can be manually overruled according to personal preferences

Furthermore the sensor unit contains a small push button to change the mode and for calibration.

**Cell office application**

When enough daylight enters the room, the amount of artificial light will be automatically reduced at the window side. The corridor side will follow the window side with a 30% light offset.

ActiLume system switches the lights in an office automatically on and off on occupancy and regulates the lights down when enough daylight enters the room, resulting in a overall saving of up to 75%. Optionally the lights can be controlled manually, either by a wired switch with a single push (touch and dim) or with a remote control.

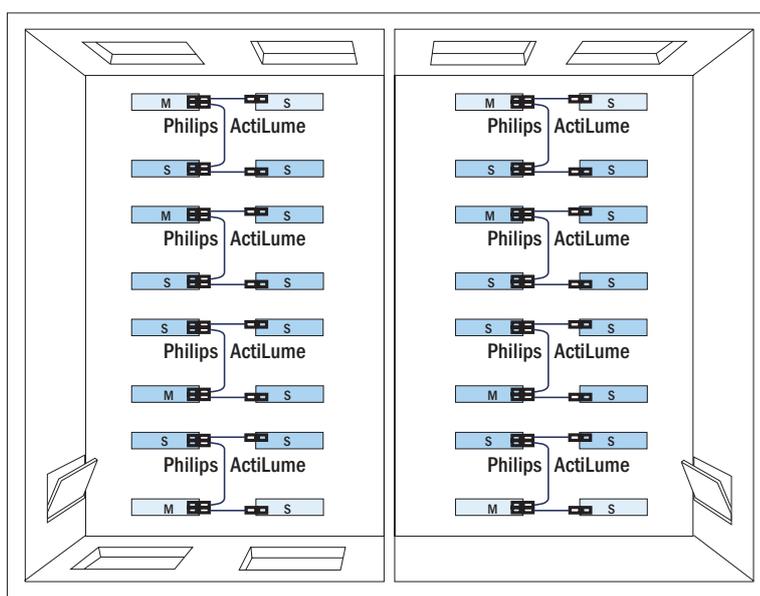

# LIGHTING CONTROL

## Open plan office application

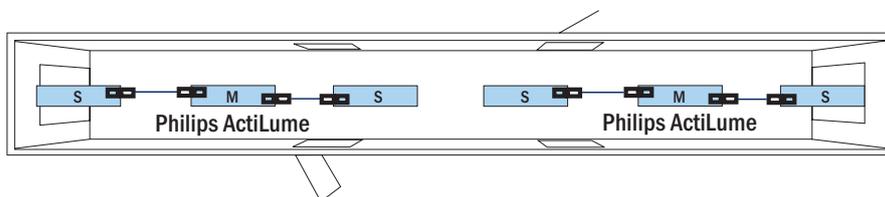

When enough daylight enters the room, the amount of artificial light will be automatically reduced at the window side. The corridor side will follow the window side with a 30% light offset.

When a person enters the office, the lights will go on automatically. 15 minutes after the last movement has been detected, the light level will be reduced to 20%. This level will be maintained for 120 minutes before the lights will be completely switched off.

## Corridor application

The ActiLume system will switch the lights on and off on occupancy. 15 minutes after the last movement has been detected, lights will be dimmed to 20%, and will stay at that level for 60 minutes more. Then the lights will be switched off. If somebody is detected during that period of 60 minutes, lights will go up to 100% again. There is no daylight regulation, therefore the amount of artificial light will not be reduced when enough daylight is detected in the corridor.

## Direct/indirect lighting modes application

The ActiLume system has two direct/indirect lighting modes, one for cell offices and one for open plan offices.

### Cell offices

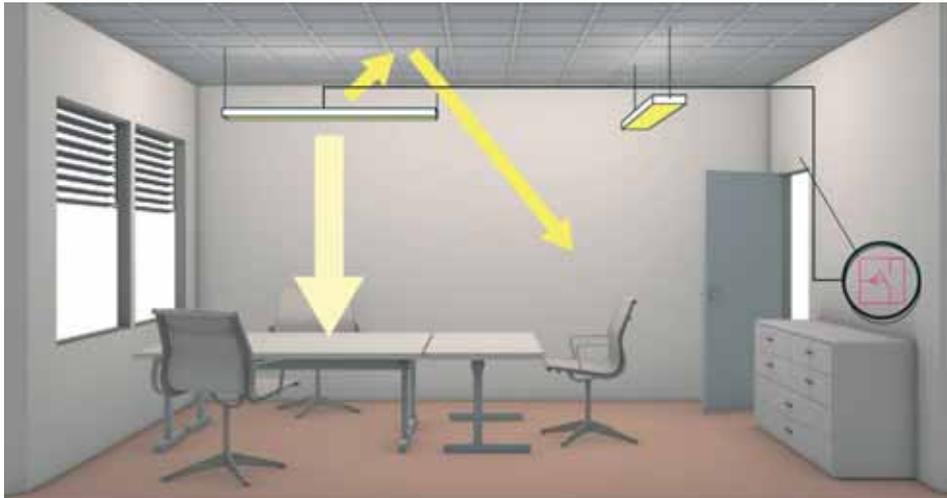

When enough daylight enters the room, the amount of artificial direct light will be automatically reduced. The indirect light will stay at a predetermined light level. Actilume system will automatically switch all the lights on and off on occupancy (both lights will be switched off 15 minutes after the last movement has been detected).

### Open plan offices

When enough daylight enters the room, the amount of direct light will be automatically reduced. The indirect light will stay at a predetermined level. ActiLume system will switch all the lights on and off on occupancy, but indirect lights will be switched off 120 minutes after the direct lights have been switched off for increased visual comfort (direct lights will be

switched off 15 minutes after the last movement has been detected).

Optionally the lights can be controlled manually for both modes, either by a wired switch with a single push (touch and dim) or with a remote control.

Thanks to the two outputs (window and corridor side), the settings of the lighting control are preprogrammed according to the place of the luminaire. Therefore the ActiLume system does not require any programming or commissioning.

The system can control maximum nine ballasts and can be extended with two additional movement detectors or an extension sensor.

## COMPARISON OF LIGHTING CONTROL SYSTEMS

POSSIBILITIES	1-10V	PHASE CONTROL	DSI	RADIO CONTROL	DALI
individually addressable components	no	no	no	no	64 addresses
addressing of luminaire groups	no	no	no	yes	16 groups
light scenes	no	no	no	no	16 scenes
logarithmic control **	no	yes	yes	yes	yes
control circuit polarity dependant	yes	–	no	–	no
switching on/off off via the control circuit	no	yes	yes	yes	yes
number of conductors to the luminaire	5	4	5	4	5
max length of control circuit	300 m	unlimited	250 m	20 – 300 m *	300 m
controlling via an interface by a computer	no	no	yes	no	yes
length of the control conductor can affect the control result	yes	no	no	–	no
light/motion sensor connection	yes	yes	yes	yes	yes
status response	no	no	no	no	yes

\* depends on number of obstacles between the transmitter and the receiver

\*\* logarithmic control – The DALI standard determines the light levels so that they comply with the logarithmic regulation curve in which case the human eye observes that the light changes in a linear fashion.

All DALI ballasts and controllers adhere to the same logarithmic curve irrespective of their absolute minimum level.

# LIGHTING CONTROL

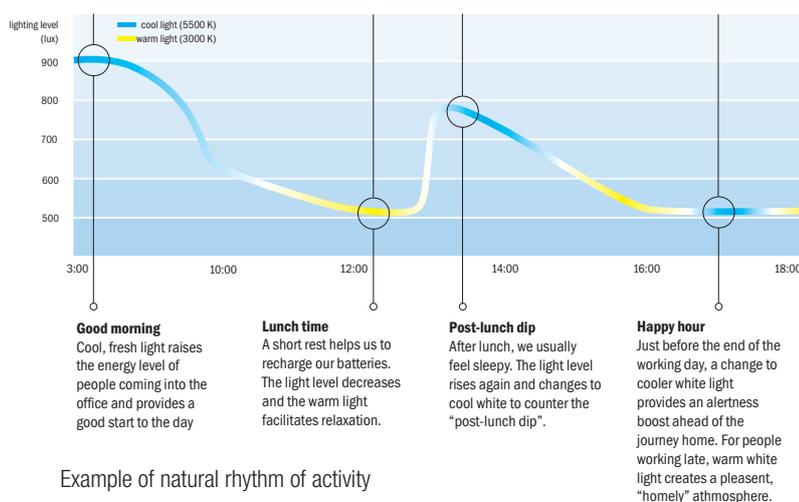

## DYNAMIC LIGHTING

Research has shown that lighting level and colour temperature influence our mood. A lighting installation with individual options for controlling the level and/or colour temperature gives a person a sense of autonomy. One of the simplest ways to enable people to adjust their working environment so that they can perform better is to install controllable lighting. Being able to modify lighting to suit our visual needs not only improves our visual performance, it also makes us feel good. In a work situation, a positive mood makes people more likely to help others, improves memory, gives rise to more efficient decision-making, increases innovation and enhances creative problem-solving skills.

Thus, we can use central control – to create lighting rhythms where the illuminance and spectral distribution of light change according to our photo-biological needs or rhythms and where the colour temperature follows the rhythms of the day to make us feel more comfortable. This will in turn have a positive impact on our work performance.

Dynamic Lighting is an advanced solution that brings the dynamics of daylight into the working environment. Following the rhythm of daylight, Dynamic Lighting creates a stimulating, 'natural' lighting ambience and enables individuals to control the lighting

according to their personal preference. Dynamic Lighting enhances people's sense of well-being and therefore their motivation and performance.

Example of natural rhythm of activity

Warm white light (3000 K) facilitates relaxation and improves people's well-being, while daylight-white light (5600 K) stimulates and activates the human body. Dynamic Lighting can be applied in office environments through lighting scenarios that change the light automatically during the day. These scenarios can improve people's general sense of well-being by catering to their needs at different times of the day.

## Daylight simulation with fluorescent lamps

White fluorescent lamps with different colour temperatures of 2700 K to 8000 K are suitable for daylight simulation in window-less areas, light ceilings and task lighting with variable colour temperatures. The DALI ECG is the perfect platform for this applications, too. Intelligent control of electrode preheating in dimming operations ensures that the lamps achieve their maximum life. The digital DALI interface translates the dimming values precisely into the required mixing ratios. DALI control is the optimum system for these applications because it allows very slow crossfades that are almost imperceptible to the human eye. Slow cross-fades from 2700 K to 8000 K can be configured via a graphical user interface.

## FLUORESCENT LAMPS FOR SPECIAL PURPOSES

### FLUORESCENT LAMPS WITH AN INTERNAL REFLECTOR

#### Product Features

- Internal reflector directs the light via a 160° 'window'
- Reflector directs 85% of the light downwards avoiding wasted light
- Direct retrofit for all standard fluorescent lamps operating on conventional or electronic control gear

#### Product Benefits

- internal reflector directs the light where it is needed
- energy savings of 30-50% in non-reflector luminaires without loss of light
- internal reflector is not affected by dust accumulation (in contrast to normal linear lamps)

#### Application

- luminaires without reflectors or with only simple reflectors, mainly found in industry and shops / supermarkets
- large halls where qualitative good lighting is required against the lowest possible costs (warehouses, industry halls, parking areas, hypermarkets, etc.)
- perfectly suited for dusty environments

### FLUORESCENT LAMPS WITH PROTECTIVE COATING

#### Product Features

- Protective coating around the entire lamp
- Blue ring around one end
- Direct retrofit for all standard fluorescent lamps operating on conventional or electronic control gears, available in various colour designations.

#### Product Benefits

- Special protective coating in the lamp, prevents products from contamination in case of accidental lamp breakage
- Easy identification in audit situations by blue ring at one end
- Protects products from discolouring and loss of taste by 90% lower UV emission

#### Application

- For use where contamination resulting from lamp breakage must be prevented, e.g. in food preparation, health care, pharmaceuticals, shops etc.
- Suitable for use in environments with increased risk of breakage, e.g. sports halls
- Suitable for use in environments where UV emission should be reduced (museums, libraries, archives, food industry, fashion shops, etc.)

### FLUORESCENT LAMPS WITH HIGH-QUALITY FLUORESCENT COATING

#### Product Features

- High-quality fluorescent coating
- Direct retrofit for all standard fluorescent lamps operating on conventional or electronic control gears, available in various colour designations

#### Product Benefits

- Very good colour rendering. Making colours appear rich, deep and enhanced as they do in daylight, making products appear more attractive

#### Application

- Used in applications where good colour rendering is crucial, such as shops (flower, fashion), museums, hospitals, printing industry, etc.

### FLUORESCENT LAMPS WITH ENHANCED BLUE LIGHT CONTENT TO PROMOTE WELL-BEING

#### Product Features

- Enhanced blue light content positively influences well-being
- Unique phosphor coating generates a light spectrum with an optimal balance between light for vision and blue light to promote well-being. Direct retrofit for all standard fluorescent lamps operating on conventional or electronic control gears.

#### Product Benefits

- Tests show that ActiViva lighting makes people feel more alert, awake and energized, indicating an increase in their performance of 10% or more
- Contains 25% more blue light than daylight (can be combined well with other light sources in existing installations)

#### Application

- Indoor working areas (call centers, industry, schools, healthcare etc.), especially where an energizing environment needs to be created

## **FLUORESCENT LAMPS WITH LONGER LIFETIME AND LESS EARLY FAILURES**

### **Product Features**

- Significant reduction of early failures based upon a new technology
- Extra long and reliable lifetime
- Direct retrofit for all standard fluorescent lamps operating on conventional or electronic control gears, available in various colour designations

### **Product Benefits**

- Longer lifetime and less early failures lead to less hassle and lower maintenance costs and facilitate the change from spot to group replacement
- Less waste and disposal cost at end-of-life
- Good environmental choice because of long reliable life (380% better than T8 standard), low waste (only 1 lamp compared to 4 T8 standard), lowest mercury content and lead-free

### **Application**

- Suitable for use in applications where maintenance costs (high ceilings, difficult to reach) and disruptive costs are high (stopping of production process), or where lamp failure is not acceptable for e.g. safety reasons: process, food and petrochemical industries

## **FLUORESCENT LAMPS WITH INSIDE A CLEAR T12 TUBE FOR LOW AMBIENT TEMPERATURE**

### **Product Features**

- Improved lumen output in low ambient temperatures
- Robust lamp construction due to strong, temperature-resistant assembly kit

### **Product Benefits**

- High lighting level in low ambient temperature applications compared with other fluorescent tubes
- Fully temperature-resistant in all conditions; no temperature-related relamping problems
- Good environmental choice because of highest energy efficiency in colder conditions (<10°C)

### **Application**

- Indoor: cold stores and other refrigerated areas
- Outdoor: petrol stations, car parks, industry

## RESISTANCE TO CHEMICAL AGENTS

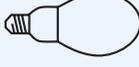

Before mounting a fitting, the local environment must be checked for chemical agents that might attack the material making up the fitting: polycarbonate, metacrylate and polyester. The chemical agents listed in the table below apply where ambient temperature is 25°C and where there is no mechanical stress that may cause permanent deformations.

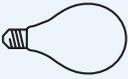

Chemical substance	Polyester	Acrylic glass (diffusor PMMA)	Polycarbonate (diffusor/housing PC)
Acetone	not resistant	not resistant	not resistant
Aliphatic hydrocarbons	partially resistant	partially resistant	resistant
Alcohol up to 30%	resistant	resistant	resistant

# GENERAL TERMS & CONDITIONS OF SALE

## **GENERAL TERMS & CONDITIONS OF SALE VALID FROM APRIL 2008**

### **1. APPLICABILITY**

These General Terms and Conditions of Sale shall govern all sales of products from OMS LTD. and its subsidiaries, affiliated companies, branches, other companies which belong to the same group of companies, distributors and agents (the "seller") to any buyer.

These General Terms and Conditions of Sale shall not override individual terms and conditions expressly agreed between the parties in any particular written sales contract.

The seller reserves the right to modify these General Terms and Conditions of Sale at any time.

### **2. SALES ORDERS**

The buyer shall place written orders for the products with the seller.

Orders shall be binding on the seller only if accepted in writing by the seller. The seller may either accept or reject the buyer's order.

### **3. PRODUCT INFORMATION**

Samples of products are submitted only as indicative of the class, size or colour of products. Any measurements of size, weight or finish of products are approximate only and may vary.

Catalogues, brochures and price lists are intended for general guidance only and do not form part of any sales contract.

The obtaining of any necessary consent for the installation of the products shall not be the responsibility of the seller.

Specially designed drawings or plans provided by the seller shall be checked for accuracy and suitability by the buyer and finally confirmed by the buyer.

### **4. GUARANTEE**

The seller's liability for defects in the products shall be limited to the terms of this guarantee.

The guarantee covers defects in materials or workmanship. The seller shall not be liable for defects due to natural wear and tear, damage in transport, faulty use, maintenance, storage or any other circumstances beyond the seller's immediate control.

The guarantee is valid provided that the product has been used and installed according to given instructions and existing regulations. The guarantee ceases immediately if anybody other than a person authorised and approved by the seller repairs, changes or opens the product.

The guarantee is valid as follows:

- (a) For lighting fixtures with electronic ballasts OSRAM + lamp OSRAM, 60 months from date of delivery.
- (b) For lighting fixtures with electronic ballasts other manufactures or with magnetic ballasts, 36 months from date of delivery.
- (c) For construction defects, (welding, painting and so on) one year from date of delivery.

All defects shall be notified to the seller in writing within 14 days from the date of delivery or, if the defect could not have been discovered through a careful inspection of the product, immediately after discovery of the defect and in no event later than the expiry of the guarantee period as specified in (a), (b) or (c) above. The seller reserves the right to make the final decision regarding claim validity.

All undertakings, warranties, conditions, liabilities and remedies relating to any qualities or defects in the products other than those expressly contained herein above are expressly excluded. In particular, any implied warranties and conditions of merchantability and fitness for a particular purpose are expressly disclaimed.

### **5. PRICES**

The products shall be considered sold at the seller's prices and payment terms prevailing at the time of the seller's order confirmation or any other written acceptance of order.

Unless otherwise specified by the seller, all prices quoted are ex works (seller's named place, Incoterms 2000) in unit boxes.

Any applicable value-added tax, duties or other public charges paid or payable by the seller shall be added to the price and shall be paid or reimbursed by the buyer.

Firm price quotations are valid for a period of one month only from the date of quotation.

The seller reserves the right to increase any agreed prices.

### **6. TERMS OF PAYMENT**

The seller shall, at its discretion, always be entitled to demand payment either in advance, through a Documentary Credit (D/C) or through an irrevocable Letter of Credit (L/C) confirmed by a bank acceptable to the seller. The L/C shall include partial shipments and transshipments, and be payable at sight in the seller's

country upon each partial shipment against the first presentation of documents.

Where payment is by D/C or L/C all related costs shall be at the buyer's account. Where the seller has granted the buyer a credit facility, terms of payment are thirty (30) days net from date of invoice, unless otherwise agreed in writing. The buyer agrees to settle the seller's invoice in full without any deductions or set-offs. All crediting shall be issued by the seller. If payment is made by cheque, all related costs will be debited from the buyer.

The seller reserves the right to withdraw or modify credit facilities at any time by written notice to the buyer.

#### **7. DELAYED PAYMENT**

When payment of any of the seller's invoices is overdue, the seller may suspend the contract to which the invoice relates and any other contract then subsisting between the seller and the buyer. No deliveries will take place if invoices are overdue.

Interest on overdue amounts shall accrue without notice at the statutory rate prevailing in the seller's country according to the actual banking rate in National Slovak Bank.

If the seller is required to bring legal action for collecting overdue accounts the buyer agrees to pay reasonable attorney fees and legal costs.

#### **8. ORDER AND DELIVERY TIME OF PRODUCTS**

The seller will deliver products in full packages and in minimum quantities of 5 pieces (not applicable for moduls/samples) as determined by the seller. Unless expressly stated otherwise in writing, the seller will accept. Order of a minimum amount of 6.000 EURO net .

Unless otherwise specified by the seller, the products shall be delivered ex works (seller's named place, Incoterms 2000) as stated in the seller's acceptance of order at such times as the parties agree. Any dates quoted for delivery of the products are approximate only.

The seller reserves the right to make partial shipments and to make deliveries by or through its subsidiaries, affiliated companies, branches, other companies which belong to the same group of companies, distributors and agents.

By order cancellation within 48 hours below agreed delivery date, a penalty of 30% of net order value will be charged.

#### **9. RISK AND TITLE**

The risk of loss deterioration shall pass to the buyer immediately upon delivery.

Title to and ownership of the products shall pass to the buyer only upon seller's receipt of all payments due to the seller for the products delivered.

The buyer shall not be entitled to pledge or in any way charge by way of security for any indebtedness any of the products that remain the property of the seller.

#### **10. INDUSTRIAL PROPERTY RIGHTS**

The buyer acknowledges that all trademarks, trade names, patents, industrial designs, drawings, plans and other intellectual property, whether registered or not, as well as the seller's or its suppliers' know-how, relating to the products or provided by the seller are and shall remain, the exclusive property of the seller and shall not be used, distributed, licensed, disclosed or registered by the buyer or any third party without prior written consent from the seller.

The buyer shall not use or disclose any of the seller's trade secrets or know-how relating to the products.

#### **11. FORCE MAJEURE**

The seller shall not be held liable for any failure to perform caused by reason of force majeure events or other circumstances or impediments beyond the seller's control. This shall include, but not be limited to industrial or labour disputes, riots, fires, floods, wars, embargoes, shortage of labour, raw materials, energy or means of transportation, whether affecting the seller or any subcontractor, or for circumstances caused by reason of laws, regulations, orders or acts of any government or authority.

The buyer shall not be liable for failure to take delivery of the products if the buyer is prevented from doing so by unforeseen governmental import restrictions or similar force majeure reasons.

#### **12. GENERAL LIMITATIONS OF LIABILITY**

The seller shall in no event be liable for any special, incidental, indirect or consequential losses or damages such as loss of profits, loss of contract, damage to property, loss of use, purchase in replacement, or liabilities to third parties.

The seller shall be liable for personal injury and damage to property (product liability) only if it is proved that such injury or damage was caused by the seller's gross negligence.

No action shall be brought against the seller more than one year after the cause of action has occurred and in no case later than three years after the delivery of the products.

#### **13. INSOLVENCY**

The seller shall have the right to terminate forthwith any and all sales contracts for any products that have not been delivered if the buyer becomes insolvent, bankrupt, makes arrangements with its creditors, or enters into liquidation or rearrangement of debts. In such cases also the price for all products delivered and work done shall become immediately due and payable.

#### **14. APPLICABLE LAW**

These General Terms and Conditions of Sale and all sales contracts shall be governed by and constructed in accordance with the United Nations Convention on Contracts for the International Sale of Goods (1980) and the laws of the country of the seller.

#### **15. JURISDICTION**

All disputes arising out of or in connection with these General Terms and Conditions of Sale and any sales contracts shall be submitted to the exclusive jurisdiction of the ordinary courts at the domicile of the seller.

#### **16. WRITTEN FORM**

Whenever a notice, acceptance, consent or other communication is required to be in writing according to these General Terms and Conditions of Sale, this requirement shall be considered fulfilled also when such communication is given or made by facsimile or electronic mail.
